Well, many of us don't use amateur radio any more because
we are HERE. As numbers of users drop, other services will
move in to take over the frequencies. We are a dying hobby.

QST QST QST QST QST QST QST QST QST QST QST

FREMONT VE TEST SESSION FOR SEPTEMBER 1st . . .

The Fremont VE test session for Tuesday, Sept 1st, will be held
at Fire
Station #7 at 7:00 P.M.

Fire Station #7 is located on the South East side of the
intersection of Auto
Mall Pkwy and Grimmer Blvd in south Fremont.

The Fremont VE test team will no longer be using Fire Station
4's
basement
room for amateur radio tests. The basement of Station #4 is going to be
used
for another Fire Dept activity.

An announcement will be made, in the weeks following the Sept
test,
regarding
the new location for the Fremont test sessions.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 29/2330Z AUGUST 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 29 AUGUST AND FORECAST FOR 30 AUGUST - 01 SEPTEMBER
STATUS INDICATORS SOL:** YELLOW ** MAG:GREEN ION: GREEN

1A. SOLAR SUMMARY
Activity 29 Aug: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 29 Aug: 147/101

GOES satellite data for 28 Aug
Daily Proton Fluence >1 MeV: 2.3E+07
Daily Proton Fluence >10 MeV: 1.2E+06
Daily Electron Fluence >2 MeV: 4.40E+08 (moderate)
X-ray background: B5.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
30 Aug 31 Aug 01 Sep
Activity Low to moderate Low to moderate Low to moderate
Fadeouts Possible Possible Possible

Forecast 10.7 cm flux/Equivalent Sunspot Number for 30 Aug: 150/105

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 29 Aug: Mostly quiet to unsettled,
with one active period.

Estimated Indices 29 Aug : A K
Learmonth 13 3222 3343
Fredericksburg 15
Planetary 20

Observed Indices 28 Aug : A K
Fredericksburg 26
Planetary 25 4543 3443

2B. MAGNETIC FORECAST
Date Ap Conditions
30 Aug 10 Unsettled
31 Aug 10 Unsettled
01 Sep 10 Unsettled

COMMENT: Isolated active periods posible during local night hours.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
29 Aug Normal Fair-normal Fair-normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
30 Aug Normal Normal Fair-normal
31 Aug Normal Normal Normal
01 Sep Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
29 Aug 50

Observed Australian Regional MUFs:
Sites in northern region near predicted monthly values.
Southern region MUFs depressed by up to 30% during local day.

Predicted Monthly T index for August: 83

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
30 Aug 80 near predicted monthly values
31 Aug 80 near predicted monthly values
01 Sep 80 near predicted monthly values

No no no, Art - the good operators are the ones using code; you can monitor their good manners by listening to the lower 50 kHz of any band.

That you hear some bad operators on phone just goes to show that even the riff-raff can pass the code test.

The only difference is that when using an amateur rig, anyone with a scanner
or another rig can hear your emergency. It doesn't matter if who you're
talking "dickers" with ya, because someone else listening could just help
you out.

This goes for a repeater autopatch, just the same.

A cell phone, however, is much different, as only the party you're calling
and a few people with illegally modified scanners can hear you.

Just my $0.02

I regret that this unknown person so fears Technicians that he wishes to give away his frequency allotments. In my opinion, the VHF & UHF bands and above are where the challenges will be in the future. The goals of the amateur radio community should be to bring in more members, not fewer. I wonder if the posting person would be on this medium if he was required to know how to program in Basic or Cobal before he could participate. His requirement to know CW is the same as if we on the internet decide that he must be proficient at JAVA before he can use the internet. Actually, that is not a bad idea. It would mean that there would be a lot fewer on here so access would be a lot better, we would probally have a much more intellegent (defined as computer literate) gathering of the minds.
The way to keep amateur radio from going the way of CB at its' worst is not to carry on an antiquated communication mode as a "rite of passage" barrier to membership in some immature fraternity. I support entrance examinations which include a more rigorous skills level in the theory of the electromagnetic communications spectrum uses. they should include a lot more in the areas of digital communications, satellite based methods, spread spectrum applications, and the world of microwaves. I am a no-code Technician class operator and do not intend to waste my limited spare time on learning CW, I have many, many more interesting subjects to master in the realm of electronic communications. The value gained for time invested is the lowest possible returned when CW is the subject of study. If I wish to comminicate in an antiquated mode, I can set my TNC to resend from my keyboard in CW mode. It will receive CW and translate to print. My, MY. the miracles of modern gadgets.

My final comments are directed to the cry that CW might be the only means of communication available in the time of major catastrophy. There are a few examples in past history when that was true. Today, however, we live in a much more connected world. Satellite communication has made the entire earth accessable with no more than a hand held transmitter. The Inmarsat and like systems now comming on line will make the entire world available with a simple telephone, eventually costing only a fraction of the price of an HF transciever equipped with a 1500 watt amplifier and the massive antenna system. The satphone is not subject to propagation fadeouts. Redundancy insures dependability. All of this tells me that the likelyhood of using HF from amateur radio operators as a last ditch means of worldwide communications is highly improbable. Should there be a occasional S.O.S sent, it will probably be sent be an automatic emergency system via satellite as was recently used on the downed ballon which attempted the around the world flight. It worked.

I wish that you didn't feel so threatened by the newcommers to your hobbie. Have a good life.

2596. FCC gives WA9KJI "Quiet Hours"

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-29 00:00:00 UTC
From: Captain-Crunch@mailcity.com
Message-ID: <6s8pns$6ep$1@nnrp1.dejanews.com>
Source record: 163300

The FCC has finally jumped into to the 3950 situation realizing where most of the problem is originating from: WA9KJI The frequency is generally very peaceful and orderly when he is absent. So WA9KJI was imposed with 24 hour "Quiet Hours" until further notice. (Case # 98cg404)

HOWEVER....WA9KJI STILL continues to transmit! His reasoning is: FCC Field Officer Hickman "didn't properly identify himself".

My question: What is the penalty for violating an FCC "Quiet Hours" order? Secondly, can the stations he's transmitting with get in trouble for KNOWINGLY acknowledging and conversing with someone who IS NOT legally suppose to be on the frequency?

73, The Captain

Poor Drew forget's, in his fogged brain, that I have heard him many many
times while living in Alabama. Remember KF4DDM?? Remember all the
conversation's you and Polly the idiot and his pet Billy Jerk had with
you? Not to mention your buddy "Franky". Like Rog said, change the
record.

I went to the local Radio Shack here today and bought 2 small items which only came to $7 plus change. After paying for them I noticed the new catalogs and asked for 1. All the clerk did was scan it in and give it to me. NO charge I suspect that if you purchase something even a few $ they will still give away the catalogs free. We all know it costs to print those and some people would take 10 of them if they had a chance. I am not a big RS fan but I do buy a few things there.

2610. REPOST: W9ART, Jammer of the Month

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-29 00:00:00 UTC
From: n0vfp@my-dejanews.com
Message-ID: <6s96en$j1l$1@nnrp1.dejanews.com>
Source record: 163314

If you are tired of W9ART, aka Arthur D. Visser's Jamming and Harrassing of
3950 every night of the week, The FCC and your Congressman would like to hear
from you.

Art has been been doing this since earlier this year. A Excerpt from the
Liberty Net Support page should help you:

"Art likes to play noise tapes, music, and other material from his QTH. He
also like to chant "Blah, Blah, Blah, Blah, Blah, Blah" constantly over the
airwaves for no reason. It is widely assumed that he has severe psychological
and social problems dealing with people. He claims to be married to an
African American woman and uses that as an ideological crutch and reason for
his jamming activities on 3950. He is quoted as saying though that "Everyone
has a n@gger in the woodpile." He did say that late one night in a discussion
with K5BLB on 3950. He also claims to be a union worker making 22 dollars an
hour in his job. The ironic thing is how he has time to be up at all hours of
the night conducting his stupid behavior. Sometimes he is up from 2 to 4 a.m.
doing his jamming and repetitve speeches and noise making."

- http://www.angelfire.com/ky/libertynet/W9ART.html

Do a search of DejaNews to get the whole scoop, Remember, the whole of Ham
radio and your country is depending on you.

A description of W9ART- Taken from Liberty Net Message board

Posted by James (swl) on August 15, 1998 at 20:31:29:

James in Indiana here. Enjoy the Liberty Net with it's great comments from
participants. It is good to know that not all Americans have been lulled into
a media induced stupor. As for "Artie" I'm 12 miles from him. You should see
his place: uncut grass, house must have the last coat of paint in 1966 and
drives a 20 year old Chevy with fender rustout and a pair of 8-foot CB (?)
whips on the rear bumper. Saw him at a market too, old baggy faded jeans with
a red-checked flannel shirt with what must have been 30 pens crammed into the
shirtpocket, topped off with a greazy green ballcap atop his squinty-eye'd
head. Guy's a real piece-o-work.

As of late, Art has been threatning varoius FBI and FCC agents on 3950. As far as I know, this a Federal offence punishable by jail time. I have listened to many of these during the Liberty Net, and have them taped ready to
send to Mr. Richard Lee, if he reqiures them to build a case against Art.

I have a Real Audio page, which will contain excerpts of threats from Mr. Visser. the URL is http://www.qsl.net/n0vfp/real.htm

**********NOTICE********** Even if you can't transmit on 3950 (Tech and Tech+'s or SWL's) Never fear, I have set up a specail chat room on my web page that runs during the Liberty Net is in session. The URL is http://www.qsl.net/n0vfp/chat.htm We are working on a new chat system, stay tuned for further details later.

UPDATE:

Last night around 3:00am CDT Mr. Visser spouted off another one his lies. He claimed he works for the Government. You can hear this at

http://www.qsl.net/n0vfp/art4.ra

Sorry to inform you of this, but you altered the original text. I am not in
agreement with you at all. In fact, it appears you have entirely too much time
on your hands....

In fact, since you posted from a dejanews account, I suspect I now know who
you are (lets see, is it CBRAMBO, or FRG9600???). Oh well, makes no
difference, you are a welfare recipient in any case.

> in such a hurry to escape that his genuine, imitation Black Belt flew off,
> along his propeller-driven, callsign embroidered yarmulke.

Did Lloyd say that because there were witnesses? I asked Lloyd why he
accussed me of QRMING him on the local repeater, he denied he said he had
said that, even though I got it from a reliable source that is what he said.
Now who sounds like the one with courage?

Burt

I think it's a rediculous idea that one has to pay for advertisement at all.
RS is most certainly no charity, it's a business that makes money of their
advertisement. We don't have to have any pity with RS that it costs them
money to print the catalogs, they sure earn it back. If this type of
advertisement would not be cost effective to them then they would not have
catalogs. I guess it's as with many things that we've become to accept these
things and think it's normal. It's like telemarketers who call collect, I
guess one day we'll think that's normal too. If they would use the money to
plant trees that had to come down to make the catalog, then I would be
willing to pay.

> I am not a big RS fan but
> I do buy a few things there.

Same here. I bought a cassete player a couple of weeks ago at RS. The thing
costed $19.95 and this girl tried to sell me a waranty for $19.99. She did not
seem to understand that it was a bad deal and kept trying to sell me the
waranty.

Lloyd has big everythings (at least what we normally see), including his
mouth. But he did change his story and did "back down" from what he said on
the air. Call me whatever but I do not lie.

You better go watch some more of those Shaw Brother's movies and
keep
> pretending you're the star of the show. I've seen a picture of Lloyd
> Montcalm. That some bitch looks like Andre the Giant's long lost brother.

He has now gotten fat, he weighs around 300+. He left some bank in New York,
but no one I know seems to know why.

No one will ever
> believe a deranged little yehudi like you could back down Lloyd Montcalm.
> Case closed.

I do not lie. He backed away from his ealier comments.
Ask him.

lmontcal@capecod.net

See what he says. On the air he sounds quite tough and looks big in person.
But toughness is more than that, correct?
Lloyd would NEVER hit me, never.

Burt

I live in an apartment building with TV sets using switch-mode power supplies. The result is horrendous cariers at about 6 Khz spacing all along the HF bands.

Can the MFJ1026 and MFJ1025 help with this problem ? Can they really eliminate the carriers which make QSO'ing impossible ? We are talking about carriers of S8-9 and I expect to hear stations of S2-5 on the same frequency.

If you have used these products then please tell me about your experiences with them. Like I don't want to shelve out 170 US$ if it ain't gonna help !!!

Len, CW is in NO WAY Morse Code.

As someone else stated, CW is a METHOD of transmitting Morse Code. "Morse Code" is the actual "encoding" of alphanumeric characters into short and long tones.

Hi KarL:
This is exactly what I stated:
If, in the circumstance of the "saving" of a human life,
you may operate in any manor consistant with the
"reasonable" and "Operationaly consistant"
considerations of "any" service. No single operator, following
this guideline, has been prosecuted.
HEY!!!!!
We are the good guys!. The FCC recognizes this. Local agencies
recognize this. All they ask, is that we don't get carried away!
(And I don't know of a single case in the last 20+ yrs that this has
happend)

Ok, I was nodding my head in agreement until we got here. A keyed pure
tone into a SSB transmitter *is* CW. The rules specify the characteristics
of the emission, not the circuit configuration of the radio. When configured
as above, you've just got a hetrodyne CW transmitter.

To draw a comparison Tony, I am sure you do not have a mandated testing for
a Ford TriMotor to move on from a E6 to a F18 or vise versa.

Could be why the military dropped code as well? Along with the BCAG(?)...

Do you have a point to make? Or are you just blowing more crap out of that hole you call a mouth?

Also, you have no clue as to what I really do at the Sheriff's Dept, and personally, I don't think its any of your business. Besides, you have no clue as to who I work for other than what I ahve already told anyone here (which means, you are clueless).

Meanwhile, if you have a point to make, then make it. We don't need to hear you advertising your doings with Howard kingston and friends (he's in enough trouble with the IRS anyway).

Hasta La Vista, Shithead!

Well Matt, and the author of this message is Matthew J. Cassarino
<mjc2@capecod.net> who holds the call of WV1K and lives in Harwich, Ma.
if I am such an outcast why did my PROFESSIONAL peers elect me their
President of the union THREE times?

> 1.Visit my web page, you will see, my daughter walking around the block for
> bad behavior

I do not think so but my daughter would toss her cookies before she would
touch you in any way. The last time you visited my house you wreaked of body
order and were unshaven.

3."Why no
> one likes me, from my neighbors to Hams: Tales from a Social Outcast" by Burt

Many hams do not like me, to be disliked mu bozos is a credit.

>Why I cry
> running to my boy Colin when I am wounded emotionally

Colin is employed by Cape Internet who took you offline for just cause.
Maybe you would like to tell all the reasons why he took action against you.

9.Why Scott and April
> want nothing to do with their daddy

And what proof do you have of that?

10.WA2EXQ's thoughts on exactly why Burt
> is deranged and paranoid

And Lloyd is totally stable, correct?

> See Burt's wanna-be Aryan daughter sing "Edelveiss"

As you like it.
Tell us Matt why you are in your low 20s and cannot get a job?
Tell us who your friends are on Cape Cod. In fact tell us who ANY
of your friends are. Tell us the last date you had, the last
shower you had. Tell us why you called me on the phone several weeks ago,
tell us how you PERSONALLY insulted at least ten hams on Cape Cod in Email to

me. Allow me to release the personal Email you sent to me. Tell us why
you never use your real name. You know where I live, why not knock on the door
and say HI. After all you are the only one here who is close enough to
actually "take it to me" and you are not old and weak, well at least not old.

Tell us Matt what makes you not a loser.
Tell us what your own father thinks of you.
Tell us Matt, just Tell us Matt, tell us all the names you went by here.

The world awaits the word of Matthew J. Cassarino <mjc2@capecod.net>

Burt

The Faricys wrote in message <6s6id3$d7r@bgtnsc02.worldnet.att.net>...
>Incorrect. CW/Morse code was used as early as the mid-1800's.

Morse Code was indeed used in the mid 1800's, but CW was not. Morse Code was used on the landline telegraph system, though a slightly different version than the International Morse Code used in Amateur Radio was used. There was no radio as we know it, and certainly no CW, nor even Spark (damped wave) transmissions. CW and Morse Code are NOT the same thing. You must have an oscillator and some means of radiating the signal therefrom in order to have CW. Samuel F. B. Morse invented Morse Code... he did NOT EVEN DREAM of CW. The landline telegraph was technical achievement enough for that day and age.

Discounting a few other experimenters with prior claims generally unrecognized today as being "real" radio, Guglielmo Marconi sent the first Spark transmissions of practical communications value in 1895. This was Damped Wave, or Spark, and not CW. CW was not practical until the invention of the Audion, or Triode, by DeForest in 1906 and not in general use until a few years later.

Mid 1800's? Maxwell did not even publish the theoretical work until 1873. The coherer was invented by David Edward Hughes in 1879. Around 1888, Heinrich Hertz started playing around with his spark gap generator. There was still no real communication, since the only way to detect at a distance the presence of radio waves was through use of the coherer, which only indicates when a transmission begins, not when it stops. An improved coherer was invented by Marconi in 1895, along with a recognizable antenna/ground system, an improved spark oscillator, and a couple of other wrinkles that enabled the first Morse Code transmission and reception via radio over any practical distance in the same year. In 1897 he transmitted from shore to a ship 18 miles distant. in 1899, the FIRST commercial radiocommunication link was established, between England and France. This was STILL not CW. In 1901, radio came of age with the first verified transatlantic communication, with regular two way traffic beginning the next year. STILL not CW. CW did not come about until around 1907 but I am not sure of the exact year... but the triode, initially used as a receiving amplifier, did not come about until 1906 anyway.

There was no CW in the mid 1800's... not even science fiction yet. There was Morse Code landline telegraphy, but no radio and certainly no CW.

No, it is incorrect -- amateur operators are allowed to transmit OUT OF
THEIR PRIVILEGED bands, however NOT out of the amateur bands entirely.

In other words, no, you cannot transmit on any frequency in a dire
emergency, OTHER than any amateur frequency.

I've re-read 97.403 and it's context, and it does clearly state what I've
said above. Try the "FCC Rule Book", as it shows the same.

Incorrect, Dennis. I've re-read 97.403 (and context) and I've re-read a
section in the FCC Rule Book, and it clearly states that no transceivers
that are not licensed and not type-accepted for a specific band may be used
AT ANY TIME for ANY REASON.

This does mean, however, that you may transmit on ANY AMATEUR frequency --
just not out-of-band.

I'll mention mine too: The only three times I have ever been in a situation where emergency assistance was needed, amateur radio FAILED MISERABLY! A cell phone call saved the day. Some old coots on a 2M repeater wanted to dicker with me when I asked for someone to call the police.

In fact, there is no longer any superstition in my mind that amateur radio is relevant any more in this day of satellite transponders and cell towers. A cell phone is a far better investment in emergencies than any ham rig could ever be.

From: jdc@cci.com
Message-ID: <6s7md6$fsh@bmerhc5e.bnr.ca>
Source record: 163367

For sale: That hard-to-find power plug for Yaesu VX-1R radios.

Price, including first class postage to 50 states and Canada:
1 connector for $3.00
2 connectors for $5.00
3 connectors for $6.50
(add $1.50 for each additional connector)

We also have 7806 regulators for an additional $0.50 each when
you get one or more connectors.

Add wire and a couple bypass caps and you can have a 12-volt
adapter for under 5 bucks. Compare that to the $38+ that Yaesu
wants for their's. (At the Rochester hamfest it was "only" $35.00.)

Send a note saying how many you want along with a check or M.O.

I would buy an old modem and splice into the telephone line interface
circuit. You might even be able to use the ring detector circuitry to
do something useful.

In the USofA you can connect anything you want to the
telephone lines inside your own residence. It might be illegal to put
enough voltage on there to kill somebody or start a fire in the
central office, but there are no "phone police" going around examining
all the equipment connected to the phone lines to see if they meet
some specification. If you connect something up that makes trouble
for the phone company, they have the right to disconnect your service
until you get rid of it. If you want to connect something that makes
your service unsatisfactory without causing other subscribers any
harm, you're completely within your legal rights to do that.

What you're probably thinking about is *selling* telephone
equipment that doesn't conform to proper standards. That's a
different matter altogether.

Jim

2666. Philburt wants to see YOU

Newsgroup: rec.radio.amateur.misc

Ever wonder why Philbert wants people to visit HIM ? All these calls for Jim to visit, CBRambo to visit (although I doubt he'd waste the gas). Bert's problem is he doesn't offer TO visit. That's why he never meets anyone. C'mon Burt, let's FB eyeball OM. I have a fresh stack of W4MPY's eyeball QSO cards from my upgrade and the 33rd one is for YOU. But YOU'LL have to come to ME. C'mon Burt, stop by if you know who I am. I'll cook up soe mazto ball soup from my old family recipe and you can bring your Neo-Nazi daughter when she gets back from Austria. Don't you see it ? She's liking the Germans because you hate them. That's the first dominoe.

Ever wonder why if you mention Burt's family he fails to respond but he drills with his dull bit at the rest of ham world over and over and over and over, thus manifesting the obsessive compulsive disorder he has battled since the 1970's ?

No one visits Bert when he issues a challenge ? He lives a 1/4 mile from the Dennis Police and he will call the cops faster than you can say "Oi-K". He's waiting to make a fool out of someone. Know what Bert ? You're the sucker. Compelled by a seratonin deficit to answer every challenge. Tragic.

Hey hey to N1UYW btw. Stop by, we'll chew the rag. Ask Phyllistinebert for directions, he knows EVERYTHING.....or at least, he's going to learn.....heh heh heh

Sorta depends on how you interpret the words "No provision of these rules".
I read 97.1 as a provision of those rules. I read 97.403 as saying "Part
97 doesn't apply to anything in an emergency."

If someone wants to charge me with violating the type approval provisions
and/or license requirements in the Land Mobile rules for using my rig to
transmit emergency traffic, they may feel welcome to do so. Even if I
thought they could make it stick, I'd trade my ham license and money to
pay a fine for someone's life any day.

However, I keep in mind that I might be trading that license away whenever
I feel tempted to key the mike on a non-ham frequency.

And I have a much better idea anyway. In the spirit of volunteerism, I
work for a local emergency services agency, RACES division. As part of
the organization, I'm authorized by the Director to use my type-approved
GP300 to transmit on local police and fire frequencies under their
license. Bypasses the whole argument, AND helps the community in the
stated purpose of amateur radio.

Y'all could try it. (Some of you do.)

S 97.403 Safety of life and protection of property.
No provision of these rules prevents the use by an amateur station of
any means of radiocommunication at its disposal to provide essential
communication needs in connection with the immediate safety of human life
and immediate protection of property when normal communication systems are
not available.

According to 97.403, no part of Part 97 prohibits ANY form of communication
during an emergency.

I believe it depends on where you are, and what the local amateur
community is like. Around Chicago, requests for emergency help on a
repeater are likely to be met with stony silence; I once had a lid start
calling CQ over my second announcement of emergency traffic. However,
a friend tells me he was near Milwaukee when he witnessed a serious car
accident; he hit a repeater and got a pileup, and help was on the scene
within four minutes as a direct result of one of the hams contacting the
proper authorities.

97.403 says that Part 97 doesn't apply in an emergency. It says that
flatly and without qualification. It specifically says that Part 97
does not apply to ANY form of radiocommunication in an emergency.

If you want to quote rules that apply, quote from the Land Mobile Service.

SB DX @ WW $OPDX.372
Ohio/Penn DX Bulletin No. 372

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 372
BID: $OPDX.372
August 31, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1FK, K1XN & The GOLIST, W1TYQ, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, W4QA, DF4RD, F6AJA & LNDX, G3SXW, G4BUE & DX News Sheet, I2MQP, JF2MBF, LA2PA, ON5NT, VE3CUI, YB4JIM, ZP5AZL, ZS2CR, ZS4BS and ZS5BBO for the following DX information.

3D2, ROTUMA (Update). This is a reminder that by the time you read this Jose, EA4CP, should be active as 3D2DX until September 19th. Activity will be on SSB/RTTY on the following suggested frequencies:

SSB - 1824.5, 3775, 7045, 14195, 18135, 21295, 24945 and 28395
RTTY - 14083 and 21083 kHz

Check out the Web page at: http://www.qsl.net/ea4dx/index.html
QSL via EA4CP: Jose Diaz, Doce de Octubre # 4, 28009 Madrid, Spain
For E-mail QSLs, send to: 3d2dx@earthling.net

5V, TOGO (Also 9G). Just before going to print OPDX received a press release from Roger, G3SXW, announcing that eleven operators will activate 5V7A from Togo, West Africa with seven one-kilowatt stations and 17 antennas in November. This will be the third consecutive 5V7A entry to the CQ World-Wide CW Contest by the Voodoo Contest Group. Some 15,000 CW contacts are expected on the six non-WARC bands during the weekend of November 28th and 29th. A few days before and after the contest the operators will be active (including WARC bands and possibly RTTY) with personal call-signs from Togo and possibly also from Ghana. The complete press release with more details will be sent to all OPDX InterNet Subscribers.

9M6, EAST MALAYSIA (Also HS0). Phil, G4JMB, currently in Bangkok, Thailand, as HS0/G4JMB and is hoping in the near future to receive the callsign HS0Z, will be operating from Kota Kinabalu, East Malaysia, between December 7th and January 16th (1999). Also, again during the

months of March and April as 9M6CT. Phil also reports that there is a NEW QSL Route for his G4JMB, 9M6CT, HS0/G4JMB and VR2CT. Both the U.K. and Oxnard, CA, addresses are NO longer valid. Being retired, Phil has decided to handle all his QSLs himself. The address to which to send QSLs is: Philip Weaver, P.O.Box 7, Patpong Post Office, Bangkok 10506, Thailand.

8Q, LOHIFUSHI ISLAND (Maldives). Operators Zhen/KB3CCC (YL), Yuu/JR2KDN, Yasu/JI1NJC, Hiro/JJ1AEB and Nob/JF2MBF will be active from here September 15-23rd, and have requested the following callsigns 8Q7LI, 8Q7US, 8Q7CC, 8Q7HA and 8Q7BB, respectively. Their licenses will be ready by the beginning of September and if there are any changes, an announcement will be made immediately. Activity will be on CW/SSB/RTTY on 160-6 meters. They suggest:
160m - 1822 QSX 1830 and up (QSX 1908 and up for JA)
10m - 28022 (CW) and 28480 (SSB)
6m - 50105 (Beacon) QSX 50135 and up (6m beacon will be sending "CQ CQ CQ DE 8Q7BB QSX 135 ES UP K".
Even though activity will be on all bands, there will be an emphasis on 10 meters for West Coast (NA) via both Long Path and Short Path. ALL QSLs are via JR2KDN (Bureau or direct with a SAE+IRC or GS to: Yuu Yoshida, 4th Floor Kato Bldg, 529 Rokugaike, Kita-ku, Nagoya, 462-0002 Japan). If you have any further questions, requests, opinions etc., please feel free to write to Nob, JF2MBF, at: vr6jj@dxers.net
LAST MINUTE UPDATE: Nob, JF2MBF, informed OPDX this past weekend that the group has decided to bring satellite equipment for AO-10. Listen for them on 145.890 +/-.

8Q, MALDIVES. "The Daily DX" reports that a huge German team (which we have noticed contains some NODXA members) are planning to operate from here October 18th to November 5th. Operators include (X)YLs and OMs: DG0OBN, DL7IQ, DL7VYL, DL1SYL -and- DJ7TO, DK1BT, DL2RUM, DL3APO, DL6SXI, DL7BY, DL7IO, DL7UBA, DL7UTM, DL7VLA, DL7VRO, ON4CHE. The OMs will use 8Q7IO, while the (X)YLs will use 8Q7IQ. They will be active on all bands from 160-10 meters on CW, SSB and RTTY. The emphasis will be on the CQ World Wide SSB DX Contest. Two to three transceivers will be used simultaneously. On 80 and 160 meters they will use a Titanex V80E vertical. Probably more details will be forthcoming.

A6, U.A.E. The "LNDX" French DX Bulletin reports that Daniel, F6ARU (ex-VU2DRU and JY9RU), will be in A6-land for one year. No other details were given.

EM, ANTARCTICA. The 59(9) DXReport states that Oleg, UR8LV, will be active as EM1LV from Vernadskogo Base on Galindez Island. Oleg will be on RTTY daily from 1900z on 14080 kHz using (45 bauds/170 Hz shift).

ET, ETHIOPIA. The "DX News Sheet" reports that Steve/G3VMW and Andy/G4ZVJ will now be active September 16-30th, and also Alan/G3XAQ from September 19-30th from the British School club station, ET3AA, at Addis Ababa. It is possible that they may use their own callsign ET3MW, ET3VJ and ET3XA. They are planning to use "big LF antennas". For more information, check

the G3VMW Web site at: http://www.bramham.demon.co.uk
The Web site will have a log search available after the operation. QSL via G3VMW.

FK, NEW CALEDONIA. The "LNDX" reports Philippe, F5PFO (ex-J28FO) has received his FK8VHT callsign. He is currently setting up his station and will be on the air soon.

JW, SVALBARD. Leif, LA2PA, will be going to operate from Spitzbergen (EU-026) on September 11, 12 and 13th, using the callsign JW2PA. Leif mentions if propagation permits he will be active on the higher bands (15, 12 and 10 meters) as much as possible. QSL via LA2PA.

"MY BONNIE LIES OVER MY OPERATION!" Eddy, VE3CUI, who went to Ocracoke Island (IOTA NA-067), N.C., to be active but was limited to a grand total of 36 hours, courtesy of---you guessed it---Hurricane Bonnie... Eddy, states to OPDX, "I barely got set up, did the obligatory island tour with the family, etc. when the dreaded call was received early on Tuesday morning for all non-residents to EVACUATE. Too bad, as the inverted 40-meter ground plane was just becoming interesting. I did manage about 5 pages of QSOs, but nowhere near to what I had planned. The time spent in planning & logistics for the trip actually exceeded our time on the island! We are NOT defeated, however---our plan is to re-visit Ocracoke again in June of 1999, some 3-4 weeks AHEAD of the normal hurricane season there (July to November, inclusive). Apologies to all who may have needed NA-067, but, in the words and spirit of the Toronto Maple Leaf Hockey fans everywhere, '...Just wait until NEXT year!'... Hi Hi."

NAVASSA ISLAND STATUS. Dave, K1FK, reports to OPDX that he has received a recent E-mail from Mr. Joe McDermott at the U.S. Department of Interior, Office of Insular Affairs, in which he indicated the Science Team has concluded it's expedition to Navassa Island and has made an initial verbal presentations to Secretary Babbitts office. Secretary Babbitt held a press conference on Navassa and the Science Team's visit to the island and its surrounding waters on Friday, August 14th, at the National Press Club. Initial information on the science team findings is avialable at: http://www.cmc-ocean.org/navassa.
Dave states, "He (Joe McDermott) also indicated that the final, written report of the Science Team probably will not be available until late this fall, perhaps as late as November, which implies (based upon my previous communications with DOI) that any approval of applications for access to Navassa Island submitted to the DOI, will not be acted upon until the final report has been received by the Office of Insular Affairs."

OLDEST "YL HAM" IN THE WORLD??? Colin, ZS2CR (Chairman of the Border Radio Club, East London, South Africa), informs OPDX that Iris Hayes, ZS2AA, the Honorary Life President of his Club, will be 95 years old (or is it young?) in October this year. Iris is still active on the air ... and still drives a motor car! They believe that Iris may be the oldest YL ham in the world and would like to publicize this, but would first like to be certain of this fact. If you know of another YL ham (active or not) who is older than Iris, please would you be kind enough

to drop Colin a line on packet (address not given) or via E-mail to:
rroberts@dolphin.ru.ac.za

PIRATE ON THE SATELLITES. Virgil, KC8CUM, reports that someone is using his callsign on the satellites and that he has been receiving QSLs for the contacts. He states he does not have the equipment to work the birds and please do not send the cards.

QSL INFO AND NEWS.....
Akhmad, YB4JIM, reports things are back to normal. As of August 15th, the Indonesia postal system will "take an IRC to cover FULL postage cost to related country!" He states, "Thanks for that... so QSLing in YB now posible with one IRC ONLY, no greenstamp."

Med, 7X4AN, has requested that only the following address be used for QSLing: Boukhiar Mohamed, P O Box 30133, Barcelona 08080, Spain. His Algeria address and QSL Manager DJ2BW are no longer current.

SM5MX ON THE MOVE AGAIN. After a brief stay in Sweden, Rolf, SM5MX (ex. XV7SW) is now moving to Japan. So, if you need a QSL card for a QSO with XV7SW, Rolf suggests you should send your cards via hi QSL Manager SM3CXS, either directly or via the bureau. If you want to reach him in Japan, here is his address: Rolf T Salme, Embassy of Sweden, 1-10-3-100 Roppongi, Minato-ku, Tokyo 106, Japan.

Richard, 9J2DR, will go back to France in September. He can reply all QSLs for his 9J2DR, YS1DRF, PT2ZDR and TR8DR operations. QSL to his home address in France at: Richard Dandine, 10 rue de Chuignes, Faucaucourt-en-Santerre, 80340 Bray sur Somme, France.

By the time you read this, Mark's, S07WW, will be ending or over. Thanks to his QSL Manager Ghis, ON5NT, he reports that a multi-color picture (showing Mark surrounded by Saharaui children) will be on the QSLs for the S07WW operation. Cards are being printed in Germany. QSL 5T5WW and S07WW via ON5NT: Ghis Penny, Lindestraat 46, B-9880 Aalter, Belgium

SPECIAL EVENT. The International Jewish Arts Festival of Long Island (IJAFLI), sponsored by the Suffolk Y Jewish Community Center, will take place Labor Day weekend, Sunday September 6th and Monday September 7th. Members of the Great South Bay Amateur Radio Club will operate from IJAFLI in New York using the special event call W4Z. The "W" representing USA and the "4Z" representing Israel. The portable amateur station W4Z will make conatcts with amateurs in Israel to demonstrate the capabilites and good will of amateur radio. General contacts will also be made during the festival. QSL direct only with SASE with to Rich Tygar AC2P, 5 Chelmsford Dr, Wheatley Heights, NY 11798 USA. Frequencies: SSB 14.240-14.270 MHz.

TRIP AROUND THE WORLD. Roger, KF8OY, reports to OPDX that he will be traveling around the world this fall and plans on operating from the following places:
Location Dates Callsign Status of License
--------- ----- -------- -----------------

South Cooks October 22-24th ZK1OOY Secured
Vanuatu October 25-27th YJ1OY Secured
Philippines October 28-30th * Pending
Singapore Oct 30- Nov 2nd * Pending
Seychelles November 6-9th S79OY Secured

Operations will be mostly SSB with some CW. All QSLs must be sent DIRECT to KF8OY. No bureau cards will be accepted. All QSL request must be accompanied with SASE. Roger will update us on the callsigns and licences before he leaves on October 15th. There is an outside chance of him operting from India, but he is having trouble securing a license.

VP9, BERMUDA. Rush, W4QA, will be active as W4QA/VP9 from September 1-3rd. Activity will be on 20, 15, and 10 meters. Look for him on CW in the early mornings (5-8 am) and late evenings (10 pm - 12 am) [all Bermuda times]. Rush mentions to look for him 7 kHz up from the band edges (i.e 14007, 21007, etc.) and that his operating schedule may be somewhat erratic because this trip is a much needed vacation for him and his wife. QSL via W4QA (1997 or later CBA): Rush Johnson, 100 Horseman Cove, Matthews, NC 28105-7760

VU3, INDIA. It has been reported that Gerard, F6EGX, has received the callsign VU3AGX. Look for him to be active with his IC-756 radio using a quad and dipoles.

ZA0, SAZAN ISLAND. Four to five operators from the Radio Club Partizani, will activate this Albanian during the period between September 2-15th, using the callsign ZA0IS. More details are forthcoming. QSL via Arben Goxhaj, ZA1K, Box 1, Westbrook, MN 56183, USA.

ZD9, TRISTAN DA CUNHA (Update). Edwin, ZS5BBO, reports some good news and bad news regarding Ian, ZD9IL, and the Island of Tristan Da Cunha. Ian was just recently on holiday to Cape Town in South Africa, but is now headed back to ZD9 land. The good news is he should be back on the air by September 5th. Unfortunately, the antenna that was donated has not been shipped due to the high cost of shipping from the USA. Edwin continues to appeal to local Hams in South Africa and others for assistances to help sponsor to get the antenna to ZD9. Therefore, Ian will still only be operating using dipole antennas and 200w. Also, in Ian's rush to go to ZS-land he left the logbook on the island of ZD9 and therefore there has been another delay in sending out the QSL cards. The logs will be sent back on a ship to Edwin and hopefully they will arrive in ZS land in October. Once these arrive Edwin states he will get all outstanding QSL cards out. So, he requests that if you have sent out a QSL card to Ian to please be patient. You will get a card if you have sent one!! So, keep a look out for Ian from about September 5th, operating on all bands SSB only. QSL via direct to: Edwin Musto (ZS5BBO), P.O. BOX 211032, BLUFF, 4036, SOUTH AFRICA

ZP0, PARAGUAY. Tom, ZP5AZL, reports that he will be active with his special contest callsign ZP0Z during the WAE SSB Contest (September 12-13th) and the All Asian DX Contest (September 5-6th). Activity will

be on SSB and on all bands during both contest. QSL via W3HNK.

ZS3, SOUTH AFRICA (Update). With regards to last week's bulletin (OPDX.371) on contacts needed from the area "ZS3", Dennis, ZS4BS, JOTA Coordinator, reports that over the weekend of October 17th and 18th, ZS3KBS will be on the air from Kimberley for the Jamboree-on-the-Air. The main aim of the station is to work other Scout stations, but he is sure they will not mind working a few DX stations. QSL information will be given out by the station operator.

2689. FTV - WEFAX,FAX,SSTV,RTTY,CW for SoundBlaster

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-30 00:00:00 UTC
From: "Brian E. Cauchi" <_briane_@geocities.com>
Message-ID: <35e9c74b.0@195.158.64.19>
Source record: 163149
Cross-posted to: alt.ham-radio.fax,rec.radio.amateur.digital,rec.radio.amateur.digital.misc,rec.radio.amateur.misc,rec.radio.amateur.space,rec.radio.shortwave

FTV can be used to receive images from Weather Satellites and Terrestrial Facsimile Stations, text transmissions from radio telex services, Morse code, as well as Amateur Radio FAX, SSTV, RTTY and CW signals. It can also transmit Amateur Radio FAX and SSTV. No external hardware, other than a radio, is required, as all the necessary signal processing is implemented in software.

FTV is now in Version 1.0k

Main features

WEFAX, FAX, SSTV, colour SSTV, RTTY and CW reception.
Transmits 8 FAX (2 in colour) and 18 SSTV (10 in colour) modes.
FAX operation supports APT signal recognition and scheduled reception.
No external decoder or converter box is required.
Signal analysis is provided on all modes.
Many parameters are adjustable while receiving.
Recovery from wrong mode settings is possible.
Program works in real time (about 1 second DSP' time lag)
Images may be loaded and prepared for transmission while receiving another.

Minimum system requirements

80386 CPU
Sound Blaster compatible sound card
256K of extended memory (preferably 4096k or more)
SuperVGA graphics card with VESA support (at least 640x480, 256 colours)

Check out my site on http://www.geocities.com/SiliconValley/2504 for information on FTV - Wefax,Fax,Sstv,Rtty,Cw software for the Sound Blaster.

Brian, 9H1JS.

2698. Re: How to transmit on police frequencies??

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-30 00:00:00 UTC
From: Dan <n7wpd@inconnect.com>
Message-ID: <6scmgfgbu1@news.inconnect.com>
Source record: 163158
Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner,alt.ham-radio.vhf-uhf

A good freind of mine was driving home and was a witness to a vehicle that
hit and ran a young boy while he was crossing the street on his bicycle.
He was listening to the police dept. dispatch on a modified FT5100.
He immediately called dispatch, told them who he was and what he witnessed.
He waited at the scene and had to testify in court. The local PD thanked
him for his efforts, and not once did they mention anything about illegal
transmissions and such.

I think in this situation, it was perfectly acceptable for this guy to
transmit on the police freq. with a non-type accepted radio in order to save
this boy's life. Any other time...NO!

2704. IPS Daily Report - 30 August 98

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-30 00:00:00 UTC
From: rwc@ips.oz.au
Message-ID: <6scldb$fho@flare.syd.ips.gov.au>
Source record: 163164
Cross-posted to: aus.radio.amateur.misc,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 30/2330Z AUGUST 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 30 AUGUST AND FORECAST FOR 31 AUGUST - 02 SEPTEMBER
STATUS INDICATORS SOL:** YELLOW ** MAG:GREEN ION: GREEN

1A. SOLAR SUMMARY
Activity 30 Aug: Moderate

Flares Max Fadeout Begin End Freq. Sectors
M1/1N 0541UT none
M1/1N 0937UT none

Observed 10.7 cm flux/Equivalent Sunspot Number for 30 Aug: 163/117

GOES satellite data for 29 Aug
Daily Proton Fluence >1 MeV: 6.4E+06
Daily Proton Fluence >10 MeV: 7.4E+05
Daily Electron Fluence >2 MeV: 4.20E+08 (moderate)
X-ray background: B4.8
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
31 Aug 01 Sep 02 Sep
Activity Moderate Moderate Moderate-High
Fadeouts Probable Probable Probable

Forecast 10.7 cm flux/Equivalent Sunspot Number for 31 Aug: 170/124
COMMENT: There are currently three regions on the sun that are
M flare capable. Two of these regions, one in the south east
and the other in the north west quadrant have shown growth over
the last day and an X class event may become more likely if
these regions continue to increase in compexity and size.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 30 Aug: mostly unsettled.

Estimated Indices 30 Aug : A K
Learmonth 14 3323 3333
Fredericksburg 15
Planetary 15

Observed Indices 29 Aug : A K
Fredericksburg 11
Planetary 18 4433 3442

2B. MAGNETIC FORECAST
Date Ap Conditions
31 Aug 8 Quiet to unsettled
01 Sep 8 Quiet to unsettled
02 Sep 10 Quiet to unsettled
COMMENT: recurrence suggest mild increase in activity can be
expected 03-04 September.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
30 Aug Normal Normal Normal
PCA Event : No Proton/PCA Event In progress

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
31 Aug Normal Normal Fair
01 Sep Normal Normal Fair
02 Sep Normal Normal Fair
COMMENT: Short wave fadeouts are probable on daylight HF circuits.
Mild degradation during local night hours expected for high lat
comm circuits 03-04 September.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
30 Aug 75

Observed Australian Regional MUFs:
near predicted monthly values

Predicted Monthly T index for August: 83

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
31 Aug 80 near predicted monthly values
01 Sep 80 near predicted monthly values
02 Sep 80 near predicted monthly values
COMMENT: Short wave fadeouts are probable on daylight HF circuits.

Dan, Its because I don't take any shit from anyone, for any reason. If CBRambut and frg9600 want to do battle-of-wits withme , thats fine (too bad they are unarmed in this, though). I'd share some of my posts from 6 months ago, but I recently ran a tapework script through dejanews, so its not possible anymore. :)

To sum up, CBRambut, frg9600 and others in here (probably mostly the same person), decided that I would make a good "mark" (or victim) in various matters.. It really hot and heavy when one of them threatened me with a form of blackmail (threatening to reveal that I supposedly posted to an alt.sex newsgroup) by revealing this "damaging information to my friends and people that I work with locally. So, I simply removed that power by making it vastly more public. A few people started having to explain things after that. :)

Oh well, these detractors of mine are welfare cheats, rednecks (or whatever you can name them) and simply have no life. Oh well. I can't help their lack of education and poor social skills.

Eric.

Please visit my World Wide Web Site, you have never seen a page like it.
New updates just for .policy and .misc users. You will see:

1. See Hillary do something naked.
2. A blond naked chic.
3. Attacks against Burt K1OIK's opinion of ham radio in a national publication for broadcasters
4. Burt's opinion on the First Affair in the White House with a picture of the new fist couple.
5. An actual picture of Burt on the throne.
6. The writings of me and others on ham radio, hear a typical ham contact.
7. The warm side of K1OIK, hear me speak, see me with famous people.
8. A test for your SVGA monitor
9. Pictures of me and my family.
10. Did common German's enable the holocaust?
11. See now the future of ham radio.

Burt Fisher Teacher of video, broadcasting and electronics
Amateur call South Dennis, Ma. (Cape Cod)

I doubt I challenged anyone to a "showdown." I doubt anyone would even have the guts to talk to me on the air and say what they say on a keyboard, and none would mouthe the insults in person.

How many sanctioned full-contact for a
> paycheck matches do you have under your black belt? Will we be seeing you in
> the ratings soon? Will you be on ESPN2 this month?

None. To challenge most hams physically requires more in the mind than the hand but even the hand requires little when dealing with most hams. Now a US Marine I would be scared of.

> Talk is cheap

Absolutely.

. These
> hambos all think they can whip the world. They are mostly a bunch of tired
> old middle-aged fat boys who can't stand up to their 300 pound + wives. Most
> of them have a hygiene problem too. Did you ever get a wiff of some these
> guys??

Yes, Matt WV1K came to my house and smelled like a dirty sneaker.

> What have you got to show the world that says you are no different than the
> rest except for your bragging and constant begging for someone to hit you.

My picture, address and phone are easily available and I frequently tell people where I will be. Unlike you I use my REAL name.

> I agree with you on toughness is more than talk and being a big guy. I also
> agree that Lloyd would never hit you. If Lloyd ever hit anyone with one of
> them oversized gravy laddles it would be their last day on earth.

Lloyd has little toughness, quote me. He looks and sounds mean.
I have seen no evidence of real guts in you or him. At least he uses his real name.

Do you have a personal problem with your
> fellow ham?

Yes.

You got other
> teachers in your school who are wimps and stink a little. You got peoples
> living on your block who are wimps and stinks a little. Do you want to fight
> them too?

Very few of the people you mentioned are like the typical ham.

I can reduce an S7 noise from a computer sitting less than 3 feet away from my HF rig with an MFJ-1026. It took some experimenting with the noise pickup antenna, but it is the only thing that did work for me. Hope you have as good a result as I did.

> Why is
>it that when New England got shelled by Hurricanes Gloria and Bob, that WE
>didn't get frequencies set aside for US ?

If someone from New England asked for frequencies and was turned down, that certainly should be addressed before the NEXT storm hits.

>The storm hasn't even hit NC yet
>and they've comandeered a little under a dozen HF frequencies for their LOCAL
>traffic !

Experience 2 years ago with Hurricane Fran showed what happens when communication is disrupted 300 miles north, 150 miles south, and 300 miles NorthWest from the center's landfall point. This exceeds the range of VHF repeaters, even when located on 1500 ft TV towers. And linking systems rapidly fill with messages. Therefore, supplemental communication channels on HF become a necessity. Multiple bands are required because of changing propagation between daytime and night during 24-hour operation.

The emergency nets were activated PRIOR to the storm to assist the State Emergency Response Team and FEMA as they moved equipment and people into staging areas in advance, and as shelters were prepared and staffed.

We appreciate those who modified their operating schedule and frequencies in order to give us clear spots for traffic. It helped a great deal.

Hi Dave,

I just look at a book from Motorola. It says :
1) The formula Rout = Sqr(Vcc - Vcesat) / (2 x Po) is not very accurate at high frequency.
2) Vcesat is often about 2 or 3V.
Further more...
3) I try some computations for many devices where Motorola gives Rout and it is equal between 30% and 120% of the computing value with the formula in 1) !!!
4) At high frequency Rout is lower than at low frequency.

73's de Eric / F5MSL.

One simple solution to all of this.... If anyone actually reads this far down the thread.... Just call the phone company, tell them what you want to do, and GET THEIR PERMISSION! Simple, huh? They might want to inspect it or something, but they should agree if it's well built.... Considering that it's for someone with a disability, they will likely be very agreeable.... You may even get to star in their next commercial :-)

The 1026 works quite well. I use it to null out noise from a farmer next door that has a screwed up electric fence. The noise is very severe, but I can null it out 100% below 20 Mhz. Above that I need to get a better noise pick-up antenna. Currently I use the built in whip only for the noise antenna. The main antenna is an inverted vee up 15 meters.

You need to input a good sample of the noise alone, without the signals you want to listen to. This is the bottom line. The noise antenna phase is adjusted by the front panel controls so it is out of phase with the main antenna. The noise is cancelled, leaving the desired signals. If your noise sample also contains the desired signal it will also be cancelled. If you are using indoor antenna's for both the main and noise sample with noise sources in other parts of the building it may not work well, since you may have trouble getting a good noise only sample.

The workmanship is good, and the phase shift circuit is clever.

If you can get a amplified directional loop for one of the antenna's, it might work using only indoor antenna's.

Good luck;

Steve

I have a Bug that I would like to sell or trade, but have no idea of price.
It's chrome and has a wide base on it. Serial number is 213677. I has a
triangular shaped fulcrum and the speed setting bar has numbers on it wiht
the weight there too. All parts are on it and it's in really good shape.
On a scale of 10 (new) it's at least an 8.

Hmm, that would be Stubblefield and Loomis I suppose. Nathan B.
Stubblefield was sending wireless *voice* modulated signals in 1873
(he did a demonstration for Congress between a ship on the Potomac
and a shore station while lobbying for money to develop his invention
further, the demonstration went fine, but Congress didn't give him any
money). Loomis was operating his aerial telegraph during the same
decade. This was an *unpowered* system which depended on the natural
electrical gradient, but Loomis demonstrated it over a 23 mile path, not
bad for a purely passive system.

Of course Tesla had his oar in there too. In 1895 he demonstrated
a radio controlled submarine in New York. And we all know about
his Colorado experiments in 1899 where he resonated the Earth,
and the Wardenclyffe tower (the first capacity hat loaded vertical)
he built to distribute global wireless power (he went bankrupt before
bringing that to fruition). Tesla's patent on the double circuit tuner
was what finally broke the Marconi monopoly on radio too. (Marconi
was infringing Tesla's patent, Marconi's own single circuit tuner patent
didn't work over more than a few miles, he had to use Tesla's double
circuit configuration to get any real efficiency and range.)

Marconi didn't really invent much. His original patent was just a
rehash of Hertz's prior art. He did invent an improved coherer,
which was quickly superseded by crystal and electrolytic detectors,
and he did slap his name on the unbalanced monopole vertical antenna,
though Loomis used it first. Etc. Marconi was mainly a promoter and
businessman, sort of like Bill Gates. He didn't invent anything much,
but he knew how to aggressively grab and market the ideas of others.
He deserves credit for creating a commercial radio industry from
what had been up until then mostly just a scientific curiosity or
a hacker's toy.

Well, ever the pedant, I must say that CW is a pure sinewave carrier.
It can be modulated by on off keyed Morse, or it can be modulated by
voice, or it can be frequency shifted for RTTY, etc. All current radio
is CW, even SSB which depends on a pure CW carrier even though
it suppresses it before transmission.

The alternative to CW is DW, ie Damped Wave instead of Continuous
Wave. DW was also called Spark from the way it was generated. That's
illegal now, though it was heavily used in the early days of radio before the
Fessenden and Alexandersen alternators came along to produce CW, and
before Hartley used Fleming's valve to produce CW.

And BTW, much of early radio used FSK to transmit Morse rather
than on off keying. That's because arc transmitters couldn't easily
be started or stopped, but it was easy to key a reactance to shift their
frequency.

Yes, I had the opportunity to evaluate an MFJ-1026 recently.

Having owned a JPS ANC-4 for a few years I was quite keen
to do an A/B comparison in a controlled environment.

Boy, was I dissapointed in the MFJ unit.

It was more fiddely to adjust and the depth of the null was
considerable less than that of the ANC-4.

Another minus in my situation is that the MFJ is not speced
up to 60MHz like the ANC-4, and after trying it it simply didn't
work at 6MX.

On a positive, I must say I was suprised at how good the build
quality was, and the use of SMT componentry.
Maybe MFJ care oming into the 90's?

Ah, sounds like the RS I go to. It's a scary thing to actually ask them
a question. They usually have no idea what you're talking about. I've
also found that I have to take them around the store finding the items
I'm looking for, rather then them showing me where they are. But the
best one was when the salesperson asked me if I had to graduate from a
school of broadcasting to get my license. If those poor guys didn't have
that catalog, they'd have no idea what they were selling...

I once had a program that calculated bearing and distance between two given points on the globe.

Entry was in either Lat/ Long or Grid square.

From memory it also had a converter for Lat/Long to Grid square and visa versa.

Has anyone got such a program or suggest a URL where I can get it ?

ajay58@lycosmail.com

Please show a bit of compassion for this "O'Brainless" person upon whom you so mercilessly pick.
Please consider that he likely has severe mental problems which he cannot overcome too easily.
After all, there but for fate go you and I.....

Be forgiving....any of us could have been born with this sort of mental problem....
This man has a mountain to climb and we should pray for his deliverance.

2734. Kenwood TM-G707: Data connector pin-outs???

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-30 00:00:00 UTC
From: Gertrude Forthuber <gertrud@scout.net>
Message-ID: <35E9343A.B8EB833F@scout.net>
Source record: 163232
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc
Body handling: Binary attachment payload not displayed: vcard.vcf

I bought last Friday a new Kenwood TM-G707 and since I like to operate packet radio I would like to connect my BayCom Modem to the Data Connector.

It seems to me that the description of the pin out in the instruction manual of the Kenwood Data cable is wrong. There is no line for PTT. After trying the some possibilities I found out that pin 3 (middle/right) seems to be PTT because the baycom can key the transceiver with this line. Pin 1 seems to be the transmitting line because I can send data from BayCom to the 707 on this line.
I have only trouble to receive data. If I connect Pin 5 to the receiving line my BayCom program indicates that it receives data, but no text is displayed. So I think my pin-usage seems to be (completely) wrong.

Does anybody outhere expericence in operating the G707 with packet via data connector??
Pin numbering is taken from the instrucktion manual of the datacable:
5 6
3 4
1 2

Any hint would be very appreciated....

Thanx & 73 de Gerald, OE1GOU

1998 Fall Classic (& Homebrew) Radio Exchange

The Classic Radio Exchange ("CX") is a contest celebrating the older commercial and homebrew equipment that was the pride of our ham shacks and our bands just a few short decades ago. Our object is to encourage restoration, operation and enjoyment of this older equip- ment. A "Classic" radio is at least ten years old (age figured from first year of manufacture), but NOT required to participate in the Classic Exchange. YOU MAY USE ANYTHING in the contest, although new gear is a distinct scoring liability. You can still work the "great ones" with your new equipment!

The Classic Exchange will run from 1900 UTC September 27, to 0400 UTC September 28, 1998. Exchange your name, RST, QTH(state/ province for US/Canada; country for DX), receiver and transmitter type (homebrew send final amp tube or transistor), and other interesting conversation. The same station may be worked with different equipment combinations on each band and on each mode. CW call "CQ CX;" phone call "CQ Classic Exchange." Non-participants may be worked for credit.

Suggested frequencies:
CW: 3.545, 7.045, 14.045, 21.135, 28.180
Novice/Tech Plus: 3.695, 7.120, 21.135, 28.180
Phone: 3.880, 7.290, 14.280, 21.380, 28.320
7.045 and 3.545 will probably be the most popular CX frequencies.

Scoring: Multiply total QSO's (all bands) by total number of different receivers plus transmitters (transceivers count as both xmtr and rcvr) plus states/provinces/countries worked on each band and mode. Multiply that total by your CX Multiplier, the total years old of all receivers and transmitters used, three QSO's minimum per unit. For transceiver, multiply age by two. If equipment is homebrew, count it as a minimum of 25 years old unless actual construction date or date of its construction article (in the case of a "reproduction") is older:

Total QSO's all bands
times
RCVRs + XMTRs + states/provinces/countries
(total each band and mode separately; add totals together)
times

CX Multiplier:

SCORE = QSO's x (Rx + Tx + QTH's) x CX Mult

Certificates and appropriate memorabilia are awarded every now and then for the highest score, the longest DX, exotic equipment, best excuses and other unusual achievements. Send logs, comments, anecdotes, pictures to Allan Stephens, 106 Bobolink Dr, Richmond, KY 40475. Include TWO-stamp SASE for next CX Newsletter and announce- ment of next CX. E-mail reports may be sent to modsteph@acs.eku.edu (Al, N5AIT).

It seems to be individual store policy. The store where I got mine said
word from the regional office was to give them away with a purchase. I
made a large purchase the day before they came out and the manager said
to come back the next day with the receipt and they would give me one.
I did and I got a one foot long receipt for the catalog for a total
price of $0.00!

On A posting not long ago, I had read with interest, that a couple of Hams had some trouble with receive sensitivity on certain segments of the 2M band with this radio. As I am considering purchasing one of these , or something similiar, I was curious if anyone has seen this to be a common problem with the IC W32A.

Thanks,
Rick

You could go inside the phone instrument and make your connections after the switch-hook. That way there will never be any ringing voltage applied to the computer. When the phone is on-hook the computer is disconnected. When the phone is off-hook the computer is connected but the phone can't ring.

Better go back to school and take a class in US Law 101. Nevermind...you'd never do that....here, I'll help you: One is innocent until proven guilty under our system of justice. When making a public accusation against someone, the burden of proof is on the writer to back up his/her statement with facts to support his/her case. If he/she cannot, the target of said accusation may well have grounds for legal action. This is known as "libel" when in the written form, or "slander" when it is in spoken form.

>>>decided that I would make a good "mark" (or victim) in various

As this thread has progressed I've seen no logical answers to this
original question.

In an EMERGENCY all bets are off. You may do whatever is necessary to
save a life or destruction of property. You won't be prosecuted if you
truly feel there was a life & death emergency.

Everyone who keeps citing the laws are pussies who are afaid to key the
mike. And if you see a woman getting raped and fail to key the mike, you
are an accessry to the crime. Period.

I am dismayed that so many of you make excuses NOT to get involved when
someone's life is in trouble. Shame on you!

And that goes to doctors, too, who drive by fatal and serious accidents
and never stop - you should losse your medical licenses.

How odd, side by side comparisons by others who have posted to this group for the most part seem to be getting just the opposite of the results you get. The difference in design between the MFJ and JPS units would most likely mean a redesign of the noise antenna. Is it possible that some minor changes in the noise antenna could have resulted in much better performance for you?

Admittedly it takes some time to optimize the performance, and reduce the fiddle factor, of the MFJ-1026. However, the results obtained for a given noise with a given noise antenna seem to be repeatable. In other words you could develop a chart allowing you to set the filter before returning to a band thus reducing the amount of tuning required.

I believe both units to be good investments, and obviously some have had better results with one unit over another. Bottom line, I hope the discussion has shown the originator of the question that these type of units work well!

>So, do it, you are coming to Cape Cod. Want to meet?

Burty ole boy....I don't really care if we ever meet..HI HI. I like
to meet interesting people.HI HI. You are not interesting.HI HI. We
have nothing in common except for what is spoken over the Internet..HI
HI

To back up a bit, several months back you and I had a chat on 10
meters (on W1OJ, Roger's, repeater) and then we went to 75m. I still
don't get it why our chat was so cordial and then later you began
posting how I would not debate you. You are the one who wants to
debate everyone so why did you not initiate a debate when you had the
chance? You blew it and you have to take it out on others. Poor,
poor Burt. HI HI

Talk about someone who has no guts. Either that or your wits are
rather slow.HI HI. It took some time and some thinking on your part
to come up with how I would not debate you...HI HI. Why are you so
adversarial Burt? Not with just me but with everyone?

It has come to the point that I enjoy heckling you on the net.HI HI.
I know it bugs the ever living stuffing out of you.HI HI. You can
dish it out but you can't take it. I have your goat tied up in my
back yard and you can't stand it can you? HI HI.

>> You have to be pretty stupid, Burt, if all you want is a physical

>I just want to see you, not touch you. If you want to touch me that would be
>not a surprise.

Oh, "that would be not a surprise?" Oooohkay....right....A strange
way to word that Yoda. HI HI Anyway, I have no rhyme or reason to
even think about wanting to touch you. Ewwwwwwww! HI HI

>> By the way, I will be visiting the Cape within the next three weeks.
>> Just look for my truck, it has my callsign on the back left bumper.

>> If we see you we will be certain to render the proper respect with a
>> Massachusetts one fingered salute.

>What town will you be in?

Whatever town my truck happens to drive to...mostly all of them.
If I happen to see you you will get your due respect. If I don't see
you I will just have to reserve it for when it does happen. Needless
to say, no matter what you say or how you put it, you will not cause
me to go out of my way. I have a life and it doesn't involve
you...except for what I post here. If we do ever meet it will be a
coincidental thing. You're just not that high a priority on my "Have
to visit list."

Is it because I have no guts? Not in the least. I could care less
about peoples' guts...something you seem to be obsessed with. Do you
frighten me? A little bit. You appear to be unstable and that does
worry me somewhat.

Anyway, if you don't wish to be harrassed on the Internet....stop
doing the harrassing...otherwise I can keep this up forever. HI HI

In advance:
HI HI HI HI HI HI HI HI HI HI HI HI HI HI

At the risk of 'playing radio lawyer' - one instance does not the rule proove.

Part 97.403:
ï¿½97.403 Safety of life and protection of property.
No provision of these rules prevents the use by an amateur station of any
means of radiocommunication at its disposal to provide essential
communication needs in connection with the immediate safety of human life
and immediate protection of property when normal communication systems
are not available.

Ok - sounds good, but then if you read the begining of Part 97:

ï¿½97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur radio
service having a fundamental purpose as expressed in the following principles:

later on there's mention of different license classes, bands etc.

So - the argument can be made that Part 97 ONLY covers the ham frequencies. At the same time it's pretty tough for an enforcement agency to hang a 'good samaritan' out to dry for helping save a life.

My conclusion: Seems it's technically illegal to operate outside the ham freqs in any instance - but it may not be pursued if there's apparent 'justification' as in Don's case. You roll the dice and take your chances - only you can decide, if and when you're in such a situation if you want to play the gamble. Looks to me like Don was fourtunate - but it could have as easily gone the other way.

Bob McCarthy wrote in message <35E94D08.2A81@ix.no.spam.com>...
>In an EMERGENCY all bets are off. You may do whatever is necessary to
>save a life or destruction of property. You won't be prosecuted if
you
>truly feel there was a life & death emergency.

That is simply untrue. Yes, I agree that it SHOULD be OK to do
whatever is necessary to report an emergency. But YOUR belief at the
time is only an affirmative defense, not a complete justification.
Hams HAVE BEEN PROSECUTED for doing just what you describe. It's
stupid, but those are the facts.

>mike. And if you see a woman getting raped and fail to key the mike,
you
>are an accessry to the crime. Period.

Nope, sorry. We have no laws in the United States that require the
average citizen to report a crime. Don't use legal terms unless you
clearly understand their actual meaning. An "accessory" is a legal
term that is defined in criminal laws.

>And that goes to doctors, too, who drive by fatal and serious
accidents
>and never stop - you should losse your medical licenses.

Doctors CAN lose their licenses, and tons of money, for stopping and
rendering aid in some situations (like practicing outside their
specialty, for instance). Don't be so quick to condemn unless you
know ALL of the pertinent facts.

Whilst listening to the West Virginia Redneck and Hog-calling Net on 3.865
last night I had me a pleasant suprise that will warm the cockles of every
75 Meter operator from one end of the band to the other..

BABY HUEY (ex-KB2UEE) IS B A C K O N T H E A I R HOORAY !!!

Ole David was having himself a merry old time with the boys on 3.865! He has
a new call (3 land, sorry missed it) and claims to be operating from Pittsburgh.

If you haven't heard Comandante Day-Veed on the air yet, check him out at night
on 3.865 - much radio fun and his style is like when one scratches one's fingernails
across a chalk board. Drove the 3.865 bunch out of their ghourds - it was funny!!!

Good job euieeee!

DayVeed also said that he intends to make 3894.5 3.901 3.927 3.913 3.950 3.853
and several other spots on the dial "...his business" over the comming months.

Let's all give a rousing applause to the return of David (Baby Huey) Caspar to HAM RADIO!!!

"beg for one like you begged for money to see your sick moma then spent it
on a FT 1000 MP".

I don't see any connection here at all. The money that was sent to me
from the ABERNATHY RADIO GROUP was a total of $285.00, a round trip ticket
by bus from Gadsden Ala to Canton Ohio cost me 200 and some change.

The radio was purchased from my back pay settlement when I was
upgraded to 100% from 40% by the VA. This was about a year or more
later.

As for your other idiotic comments... <flush>

So, now that you have the facts right, shall we continue with this
irrelevant conversation?

> cell phone call saved the day. Some old coots on a 2M repeater wanted to
> dicker with me when I asked for someone to call the police.

But be reminded that I said "where radio service was
scarce". On both occassions I was in locations where
cellphones didn't work. My second choice, in both cases,
was the company land mobile radio - in these area I had no
coverage from company repeaters either.

But in both cases I was able to reach someone I knew, so
nobody had to screw around with me. I think I know what
you are talking about - you call in an emergecny and the ham
on the other end wants to know everything about you
(probably trying to verify you in a call book too) before
he'll call for help. Its never happened to me, but I have
heard it happen to others.

My cell phone is my first choice for emergency
communications. Depending on what I am doing, or where I
am, amateur radio is often third or fourth on the list.

>
> In fact, there is no longer any superstition in my mind that amateur radio is
> relevant any more in this day of satellite transponders and cell towers. A
> cell phone is a far better investment in emergencies than any ham rig could
> ever be.

I think amateur radio can be very useful in time of major
disaster. But I think it is a very small percentage of hams
that make the service look so useful in such situations.
From what I have obseverved, and expereinced, I would say
that at least 8 out of 10 amateurs are not compentent enough
in operating to be effective in handling disaster traffic.

Is that so? Hey, maybe this isn't Wascally Woger after all. You must be Vietnam Dan in disguise. Never said any of the above about you, Woger.

Speaking of Dan, I never called him a "welfare recipient." You need to learn how to follow a thread and correctly attribute the quotations of the various participants. If you wish to argue otherwise, let's see some proof. As for Vietnam Dan being a "government leech", this is true by his own admission. If the information being printed is FACTUAL in nature, there is no libel. By Dan's own admission, he receives a monthly stipend from the US Government in the amount of $2,000. Ask him about it.

"Where's that big 'ol CB RAMBO??"

Ted, you don't get it.

IT IS ILLEGAL TO TRANSMIT OUT OF BAND ON EQUIPMENT NOT TYPE-ACCEPTED FOR A CERTAIN BAND.

97.40x states all of this -- an amateur may use ANY AMATEUR FREQUENCY, but NOT ANY FREQUENCY.

Not a good answer (in fact, I didn't even write that).

It is ILLEGAL to transmit on a band whose FCC regulations require
BAND-ACCEPTED equipment. Read 97.400.

What if there are no windows, or if you are somehow unable to scream or get
to an opening?

>With a cell phone you will choose who you talk to, and make the
>call count. Most people can remember 911 or whatever.

You can choose who you want to call on a repeater autopatch, too. A repeater
autopatch is basically a semi-duplex cellular system, with the exception of
not being able to be "handed off" to another repeater. Some repeaters allow
incoming calls, also.

Could it have been NU-Morse? That is a good one. Also good is SUPERMORSE. I don't have NU-MORSE but the other one I use and like, and it is available for download at my site and many others.

Bob, you couldn't be more wrong. Almost EVERY person that has used "any
means" (IE, transmitting out-of-band) has been prosecuted, and they've had
their equipment confiscated.

According to Part 97 (97.40x), IT IS ILLEGAL TO TRANSMIT OUT OF THE AMATEUR
BANDS with a radio that is not type-accepted for a non-amateur band.

>Everyone who keeps citing the laws are pussies who are afaid to key the
>mike. And if you see a woman getting raped and fail to key the mike, you
>are an accessry to the crime. Period.

Very incorrect -- if you see a woman getting raped (which you shouldn't be
watching in the first place), you are most likely near a building, phone, or
another person (all of these constitute a means of communication).

Not keying the mic would not be classified as being an accessory to a crime.
It would mean you have the common sense to seek other help.

>I am dismayed that so many of you make excuses NOT to get involved when

From: Mitch Miller <millerm@worldnet.att.net>
Message-ID: <35E9A5FF.6E52A110@worldnet.att.net>
Source record: 163280

Rick,

I recently purchased an IC-W32A and experienced this problem on the 2M band. I thought I had a bad rubber duck antenna and when I connected via the BNC connector to my mobile 2M/440 antenna and the problem got worse. I found a posting from 8/12/98 that mentioned the same problem. I sent my IC-W32A back and am waiting to receive the a new one.

Here is what the previous posting said:

Except one thing I am not real sure about is the receive. Have you or anyone who tried to connect the radio with a mobile antenna or any antenna that has more gain than the rubber duck which came with the radio? I noticed using a connector of converting BNC to SO-239 in order to plug into my mobile antenna, it actually KILLS the incoming signals A LOT. At first, I was suspecting my antenna was bad (bad SWR), or my connector (adapter) was bad. But it was not the case at all. I tried the same process with different 2-meter radios, including the T7A, using the SAME CONNECTOR AND ANTENNA which I thought it was bad at first. THEY WORKED FINE! So I now have a unsolved misery going on here. I mean when you think about it, it doesn't make any SENSE! My signal will go as far and as good, but not incoming signals. Have you or anyone you know experience such thing? Or what is your suggestion on it? ---K.C.

Yes, Loomis and Stubblefield, especially Loomis, were the ones I was thinking of, though their names escaped me at the time I wrote that post. I had forgot about Tesla's experiments.

So to the best of your knowledge, Gary, should you see fit to reply, in what year did the first CW contact take place? And when would you say CW became more than merely a scientific curiosity and a viable means of routine amateur communication?

I am pretty sketchy on the alternator method of generating CW, and had not realized that this was actual CW. I thought the first use of CW followed the inventon of the triode.

Thanks for filling in those gaps.

If I have a choice between facing possible prosecution and saving a life, I know what I'm gonna do. I think the whole concept of "emergency" is that you HAVE to take extraordinary measures. If you do not HAVE to do so, it is not an emergency anyway, so the whole argument is moot.

It is part of your Technicial exam. If there is a life threatening
emergency, you may transmit whenevery and on what ever band you need
to help. During a life threatening emergency, you may transmit on any
frequency using any transmitter and the FCC won't care. In fact, y

>Very incorrect -- if you see a woman getting raped (which you shouldn't be

If a ham radio is the only means of communications (or for that fact
a commercial tv station) you are supposed to use it to call the
police.

Hi there...

A relay will not be fast enough. The ring is 96 volts at 25 Hz and I have seen it damage audio equipment hooked up to the tele line.

For a cheap solution, buy a low cost phone, open it up, and tap off where the handset speaker goes. You may need a small audio isolation transformer between the computer and the handset output of the phone. To not take a chance, go to any of the electronic parts stores and enquire about a small audio transformer 600 ohms to 600 ohms (for example) anything from about 300 ohms up to 2000 ohms will work okay. I did something like that, and I found a transformer that was 900 ohms to 1200 ohms with a centre tap. I put the 900 ohms as the primary and used the centre tap of the 1200 ohms as the secondary. This worked.

A number of years ago I used to see these type of minature transformes at Radio Shack. They are sometimes popular for small home audio projects.

Lots of luck...

Jerry Greenberg

You are the one demanding proof, even after you can't prove what you say to be
the truth? Whats wrong with this picture?

>
> Not now, OYE BOY, because you removed them. Nice of DejaNews to now allow you
> to remove the evidence, isn't it?
So? Your point being?

> Again, prove it and do something about it. Otherwise, please dismiss with the
> baseless allegations.
Perhaps you should do a search with the string "CBRambo" in it. You'd be
surprised at the number of hits you get (I was, more than 1000)..

>
> As usual, you evade the question. Got you again, OYE BOY! HAW HAW HAW!!!!
Nope. Its not your busniess. However, it is a challenge. Try to find out. It
won't do you any good though. You can go right ahead and argue with that brick
wall, it'll still be there when you get back.

No, Cliff, as I stated in my original posting, 97.403 applies ONLY to "these rules," that is Subpart E entitled Providing Emergency Communications. It does NOT allow operation outside amateur bands, and it requires that normal communications be out of service due to natural disaster before "Out of class" operating priveledges apply. Note that we're not talking about the original Communications Act of 1933 - that has long since been superceded by 47CFR, which is itself regularly updated and modified.

Separate rules, NOT part of Part 97, apply to operating on the public safety frequencies in question and the issue of type acceptance. They ALL are binding!

HAMFEST/COMPUTERFEST CALENDAR 1998 - NORTHERN ILLINOIS
last updated August 12, 1998

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, and ARRL for providing some of the information.

SEPTEMBER 1998

Sep 13 (Sun), Joliet, IL. Bolingbrook ARS. Inwood Recrea-tion Center. 3000 W. Jefferson St. Joliet, IL. Talkin on 147.330 (+6020KHz), 224.540 (-1.6 KHz), and 146.820 (-600KHz). VE Testing 9AM-Noon. Outdoor flea market area (no charge for space) and indoor dealer tables ($8-$12). Admis-sion $5 at the gate. Gate opens at 8AM. For additional information contact N9GH at (630) 759-4955 or listen to the weekly BARS Net, Thurs at 8PM on 147.330 (+600) or 224.540 (-1.6). You can also E-Mail dshourd@juno.com.

Sept 26, 27 (Sat & Sun), Grayslake, IL Chicago FM Club. Lake County fairgrounds. info: Mike Brost, WA9FTS, 5127 North Monterey Ave., Norridge, IL 60656-3245. tel. 708-457-0966 (the biggest and best hamfest in northern IL - AJ9S)

Sept 27 (Sun) Valparaiso, IN. Porter County ARC annual Ham-fest at Valparaiso Natinal Guard Armory on US30 just west of RT2. Take I 94 to Rt49 exit south to Rt30. Go west. Watch for signs or take Rt30 to Valparaiso IN. Watch for signs. Inside tables 6.00 ea admission 3.00. outside venders with your addmission plently of room. Food will be avaiable. Door prizes. Talk in 146.775- 131.8 pl or 146.000. Info: contact Carl W9TAD 219 878 9675.

OCTOBER 1998

NOVEMBER 1998

NOTES - Computer Central and Giant Computer shows

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am

- 3:00 pm.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (847)974-3123. See http://www.gicancomputershow.com

>QRM'ing satellite operations because they're too stupid to realize they're
>transmitting FM in a satellite passband. If they studied harder they would
be
>aware of these things. Current code requirements on upper class licenses
are

Well, when I was a no code tech working satellites I found several hams
with extra
class calls using FM simplex to talk to the car behide them on the freeway.
They were
on high power and on 145.850 (AO-27 uplink). They did not take kindly to be
told
they were going to be uplinking to a satellite if they kept it up for
another few minutes.

At least the no code techs I found doing it where glad to be told about it
and wanted to
know more about how they could work the birds.

Then there is that person on FO-20 and FO-29 that runs CW at very high power
and will
not reduce it when he has been told he is running too much. I have nothing
against CW
but I hate it when all the voice QSO's are being modulated by his CW!

2799. Motorola RD-LAP Protocol Info Needed

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-31 00:00:00 UTC
From: Kevin Fisher <klfisher@compusmart.ab.ca>
Message-ID: <35eb6c2d.0@ntnews.compusmart.ab.ca>
Source record: 162997

Hi all,

I am looking for information on Motorola RD-LAP protocol.
(I believe it operates at 19.2 k)

I am looking at purchasing some surplus equipment which I believe uses this protocol.

Mobile Data International (MDI) Model 9300 (Mobile Display Terminal - MDT)
They are now a subsidiary of Motorola I believe located in Richmond B.C
Canada

I am interested in info so I may integrate this with some existing equipment.

Any info on this equipment would be appreciated.

Thanks
Kevin Fisher VE6OXR

Come on, get real most people are not going to a rape, murder, or anything else important to be classed a life and death emergency. And 99% if they happen to see such an incident, will look the other, close the door, and turn off the lights. It's happened in the past, people overlooked a murder being committed in NY and they will continue to do so.

So I say get real!

I don't know about regs in other countries - but aircraft in
the US can have VHF marine radios on board. It is perfectly
legal for an airplane to talk to a boat under the specified
restrictions (what channels/freqs, power, altitude, etc.)

I find what you relate about the opinions of experts to be
amusing and "close to home". During a discussion I had with
a local FCC public information officer regarding cellphones
on airplanes, the subject of marine radio on airplanes came
up. When I told him that I had used marine radio while
flying he replied with a nervous smirk, "you don't want to

be telling me things like that." Well the rules have provisions for such use - as long as I followed them, whats the problem.

And boats are not totally prohibited from using aircraft frequencies either.

2805. IPS Daily Report - 31 August 98

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-31 00:00:00 UTC
From: rwc@ips.oz.au
Message-ID: <6sf9fs$rd5@flare.syd.ips.gov.au>
Source record: 163003
Cross-posted to: aus.radio.amateur.misc,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 31/2330Z AUGUST 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 31 AUGUST AND FORECAST FOR 01 SEPTEMBER - 03 SEPTEMBER
STATUS INDICATORS SOL:** YELLOW ** MAG:GREEN ION: GREEN

1A. SOLAR SUMMARY
Activity 31 Aug: Moderate

Flares Max Fadeout Begin End Freq. Sectors
M1/SF 1539UT none

Observed 10.7 cm flux/Equivalent Sunspot Number for 31 Aug: 179/132

GOES satellite data for 30 Aug
Daily Proton Fluence >1 MeV: 2.9E+06
Daily Proton Fluence >10 MeV: 2.6E+05
Daily Electron Fluence >2 MeV: 4.90E+08 (moderate)
X-ray background: B7.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
01 Sep 02 Sep 03 Sep
Activity Moderate Moderate Moderate
Fadeouts Probable Probable Probable

Forecast 10.7 cm flux/Equivalent Sunspot Number for 01 Sep: 180/133
COMMENT: There are currently three regions on the sun that are
M flare capable. There is potential for an X class event. Bz
was south during the interval 05-20UT on 31 August. Solar wind
speed was at 480km/sec at 03UT, increased to 580km/sec at 06UT,
then slowly declined to 480km/sec at 22UT.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 31 Aug: mostly quiet-unsettled,
with one active period.

Estimated Indices 31 Aug : A K
Learmonth 12 2234 3322
Fredericksburg 15
Planetary 23

Observed Indices 30 Aug : A K
Fredericksburg 11
Planetary 15 3433 3333

2B. MAGNETIC FORECAST
Date Ap Conditions
01 Sep 8 Quiet to unsettled
02 Sep 10 Unsettled
03 Sep 15 Unsettled to active
COMMENT: Mild activity observed during local night hours, probably
in association with southward Bz. Recurrence suggests mild increase
in activity can be expected 03-04 September.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
31 Aug Normal Fair-normal Fair-normal
PCA Event : No Proton/PCA Event In progress

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
01 Sep Normal Normal Fair
02 Sep Normal Normal Fair
03 Sep Normal Normal Fair
COMMENT: Short wave fadeouts are probable on daylight HF circuits.
High latitude sites may have experienced degraded HF comms conditions
during local night hours last night.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
31 Aug 98

Observed Australian Regional MUFs:
Near predicted monthly values at all sites.
Spread F observed local night at Hobart and Christchurch.

Predicted Monthly T index for August: 83

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
01 Sep 90 near predicted monthly values
02 Sep 90 near predicted monthly values
03 Sep 90 near predicted monthly values
COMMENT: IPS HF Communications Warning 52 was issued on 30 August
and is current for interval 31 August to 2 September (SWFs) .
Short wave fadeouts are probable on daylight HF circuits. Southern
region sites were 15% depressed after local dawn this morning
(probably in association with mild overnight activity). However,
depressions are not expected to persist and southern region MUFs
should return to near normal as day progresses.

2814. The Wise Advice of Mr. CBRAMBO

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-31 00:00:00 UTC
From: Gareth Crispell <gareth@capecod.net>
Message-ID: <35EABDD8.5DDE21FA@capecod.net>
Source record: 163045

Mr. CBRambo said in a recent article "Go for it. Forget the past. Live for today. Smile a little. You'll feel a whole lot better about yourself." {This is a direct quote}
I often find myself disagreeing with Mr. CBRambo, however this time I feel he has offered some excellent advise that would benefit just about everybody. The only part I would change is the "smile a little". I think people should smile a lot. I have just gone through a nasty bout of blood poisoning and darned near died from it. Puts things in perspective. My Doctor said that smiling and a good sense of humor was a valuable medicine. It lowers blood pressure and can help a man's sex life by improving the quality of erections. You could say that smiling is nature's form of Viagra. Come to think of it, forget the smile. From now on I am going to be walking around with a truly massive ear to ear wide open grin. So what if I catch a few flies.

I am glad to see that KC8JBO has such excellent English skills. I wish to personally thank him for critiquing my bio on QRZ.COM, and pointing out the errors that it contains.

I will be sure to add a more complete, comprehensive bio in the near future. And, as for the DX-394, yes, it is a fabulous radio, and I have no complaints as of yet about it. And, I purchased the radio on closeout from Radio Shack in Lansing for $170.00, not $400.00!

You are also correct, Roger, in the fact that the person that used to hold the callsign W8MMQ is now dead.

And on the business, I closed DHC Computer Consulting in June 1998. And it was a computer and internet consulting company, that had nothing to do with installing game cards, running a BBS, etc. Get your facts straight Roger. You CANNOT comment on my company, since you KNOW NOTHING ABOUT IT! All you did was read that bio and think you have my life story figured out.

In other words, this Roger Wiseman/KC8JBO has to bitch about something just to get his jollies. If anything, his responses to my posts over the last couple of days prove that. He will bitch about the most ridiculous things I have seen. I hope others can see what an idiot this guy really is.

2822. Getting long-expired ticket back- how?

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-31 00:00:00 UTC
From: Gil Bishop <gbishop@home.com>
Message-ID: <35eacf1d.1@news1.ibm.net>
Source record: 163053

Hello all!

I did a very stupid thing about 16 years ago and let my ticket expire. (Something to do with buying houses and raising babies. <g>) Now I'm starting to get the fever again and need direction. Have a couple of simple questions, but have lost my contacts with the hobby so I'll turn to you for help.

1) Obviously I'm about 15 years beyond my grace period, so I imagine I'm looking at starting over with the tests. (Had a general class.) What's the procedure now? Used to be a trip to Boston to the FCC office for everything above novice. I get the impression that all tests are now administered by "volunteers"?

2) Any chance of getting the old callsign back again? Has some sentimental value and checking the database it hasn't been reassigned.

Appreciate the info!

Gil - (formally)WB1GNH

While I agree that there are legal problems with transmitting on public safety frequencies, could give me one case where and amateur was prosecuted for sending bonfide emergency traffic outside of the ham bands.

>
> According to Part 97 (97.40x), IT IS ILLEGAL TO TRANSMIT OUT OF THE AMATEUR

That is not entirely true. Your stuck on the issue of private land mobile services. 97.40x does not address type acceptance issues.

There are more services than private land mobile where someone could get help.

> >Everyone who keeps citing the laws are pussies who are afaid to key the

Women only get raped by telephones? And what do you mean by "you shouldn't be watching anyway"? What kind of a stupid statement was that?

Again - I would advise to use the most "legal" means of calling the police. But after making a reasonable effort to do so, I sure as hell would not stop trying before using my radio.

>
>Women only get raped by telephones?

Never said that. What kind of stupid question was that? I said "if you see a woman getting raped, you are most likely near a building, phone, or another person ... "

>
>Again - I would advise to use the most "legal" means of calling the
>police. But after making a reasonable effort to do so, I sure as hell
>would not stop trying before using my radio.

I feel the same. As long as I've tried everything else, I will use the radio to contact the police, but I will do that very cautiously.

Get over five million people to send you $2.00 without spending any money! Absolutely no junk mailing or e-mailing is involved. This complete instruction booklet will show you step by step how to reach over five million people for free, how to get them to each send you $2.00, and proof that it works. This simple technique can and will work for you guaranteed!

If you are interested then this booklet can be yours for only $3.00. With your package you will receive a phone number and a personalized seven digit code. Your address is recorded with your seven digit code so if for any reason you are unsatisfied with the information you receive, call the number, enter in your seven digit code then hang up and your money will be mailed back to you automatically, no questions asked!

You have nothing to lose and everything to gain!

Send $3.00 or any questions to:

Goldtec Publications
15030 Ventura Blvd, Suite 903
Sherman Oaks, CA 91403

You are not put on to any mailing lists whatsoever.

Dear Zeno,

"33" is usually exchanged by YL hams as much as "73" is with all other hams. I am not sure of the exact meaning of it, but that is where it's used.

Probably means "Let's Keep The Guys Guessing About Something That Means Nothing At All"!

(just kidding, YL's!!!!)

2831. Re: EMERGENCY Transmission!!

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-31 00:00:00 UTC
From: Curtis Wheeler <cwheeler@ccnet.com>
Message-ID: <35EADA80.4A36@ccnet.com>
Source record: 163062
Cross-posted to: rec.radio.scanner,alt.law-enforcement,rec.radio.amateur.misc

This and the "how do I transmit on police frequencies" thread have me once again questioning how good we amateurs are at handling emergency communications. Sure - some can organize in time of disaster and handle things through RACES and ARES, etc. But what about the remote station that needs help on an otherwise normal Tuesday afternoon?

Why the hell should a ham have to consider leaving the amateur bands to call for help in the case of immediate threat to human life or property? Why can't amateurs, among everyone in the radio world, provide a more ubiquitous method that would give most hams something they could try first.

Most of this "modifying radio for out-of-band emergencies" is on VHF. Most of these real and hypthetical scenerios involve mobile users. So I ask the same thing I asked a couple of years ago - why can't we set aside a simplex VHF frequency for calling and distress calls only? And encourage hams - and scanner users (even police departments have scanners) - and anyone else to monitor that frequency.

I suggested this a while back and nobody liked the idea. I thought the reasons for shooting it down were pretty lame. Turning those reasons into to questions (going by memory)

Q. What frequency?

A. 146.52.

Q. Thats the "national simplex" channel - what will we use for a simplex channel that we can use everywhere?

A. I would propose that it be a calling and distress frequency. You could monitor, and establish contacts on this frequency. Once you have established contact, you move to another simplex frequency or a repeater per a local bandplan.

Q. Amateurs can use any mode, FM, SSB, CW. What about people that "don't have FM"?

A. FM (or equivalant) would be the "preferred" mode to use on this frequency - that is simply traditional, but you could use any mode you want that complies with part 97. You'd use FM if you have it for emergency - that would be the smart thing to try first. But if you don't have FM, use what you got.

Q. You're assuming that everyone has 2 meters. What about those that don't?

A. Most distress calls come from mobile users. Most mobile users have 2 meter capability. (Please don't tell me that this is not true just because *you* only have HF in your car or something. Most mobile hams have 2 meter capability.) If you don't have 2 meters - you'll need to figure out something else.

There would be problems with this system. There are places in the country (usually large urban areas) where 146.52 is "polluted" with idiots - but then, the whole band is probably polluted in these areas too. You'll have an enforcement problem - but you already know someone is listening in these cases.

But for those of us that travel in more "remote" areas, having a standardized place to make the first attempt at an emergency call. I don't use 2 meter repeaters much at all. The VHF side of my mobile is usually watching 146.52 and 156.800. 52 is pretty quiet in rural areas but it is occasionally used. So there are people out there.

All I am suggesting is making one frequency a calling and distress frequency. Using just like ships and boaters use channel 16 (156.800). I am not suggestng that we make it emergecny only so that it can't be used for anything else - if you want to make calls on it - go ahead. Then you move somewhere else.

Signal reports and radio checks should be allowed on 146.52 (unlike 156.800, where radio checks are prohibited - it is strictly for hailing and distress). This would allow contesting to continue on the simplex channel, provided the contacts are the typical contest type - signal report, location, and "good luck" in the contest. Contest rules should respect the frequency as a "calling channel".

I realize that a hundred people are going to tell me this is a lousy idea. I still think its a good one.

I REALLY DO NOT HAVE TO ANSWER ANY OF YOUR QUESTION'S, SINCE YOU HAVE
REFUSED TO ANSWER MY QUESTION, OF HOW DO YOU KNOW IM ABLE TO WORK..ETC.
BUT IN THE INTEREST OF CLEARING THE AIR I SHALL ANSWER THEM ALL.

> 1. Your mother was sick. She lives in Ohio and you lived back then in
> Alabamer. True or False?
>
TRUE

> 2. You were down on your luck and you needed some financial help. True or
> False?
>
ACTUALLY YES AND NO. I WAS LIVING IN THE WOOD'S IN MY FORD RV ON 400 A
MONTH, AFTER LOSING EVERYTHING I OWNED(HOUSE, FURNITURE, EQUIPMENT, ETC.)
AFTER BEING TERMINATED FROM ANNISTON ARMY DEPOT BECAUSE OF MY INABILITY
TO WORK DUE TO MY SERVICE CONNECTED DISABILITY.

> 3. You were treated unfairly in a business deal concerning the repair of a
> rig. True or False?
>
I HAD A SPARE RADIO, A KENWOOD TS-820S. BEFORE I MOVED OFF TO THE WOODS
I DECIDED TO SEND IT TO BUTCH, WB5UZS. HE AGREED TO PAY FOR IT AS HE
COULD. I AGREED TO IT, AND SENT IT TO HIM. LATER ON, BUTCH WENT CRAZY
AND DECIDED I WAS OUT TO SCREW HIM. IT PISSED ME OFF, SO I DID SCREW HIM.
I DEMANDED PAYMENT IN FULL, OR THE RADIO RETURNED. HE RETURNED THE RADIO
AFTER SOME MEMBERS OF THE ABERNATHY RADIO GROUP SAW A WAY TO EXPLOIT THE
ISSUE (IN MY OPINION). THE HARASSED BUTCH TO THE POINT THAT HE SENT THE
RADIO BACK. DURING THIS TIME, RANDY WA7CPA OF PHOENIX AZ STEPPED IN WITH
A SUGGESTION OF SELLING "STOCK" IN THE RADIO, PROCEEDED TO PAY ME ITS
VALUE. THIS HE DID, AND I HAVE NO IDEA HOW MUCH WAS ACTUALLY RAISED.
RANDY SENT THOSE THAT BOUGHT "STOCK" A CERTIFICATE. I WAS SENT THE MONEY,
AS I RECALL 450 BUX. AND TOLD TO KEEP THE RADIO OR DO WITH IT WHAT I
WILL. WHEN I GOT THE RADIO BACK, IT WAS A BASKET CASE. I TALKED TO THE
BOYS IN THE ARG AND THEY SUGGESTED I SEND IT TO BILL SIMMS (W4WKS), AND
HE WOULD FIX IT, AND USE IT FOR A BARF/ARG SPARE RADIO OR FOR USE AT THE
BARF CLUB IN MARTY'S "SUMMER HOME" IN W.VA. I SENT HIM THE RADIO, AND
HAVE NO IDEA WHAT HAS HAPPENED TO IT SINCE.

> 4. The Abarnathy Radios did some fund raising to help you. True or False?

>
FALSE

> 16. You don't never intend to pay the money back even though no decent human
> being would allow hisself to be in debt to a bunch of people he hates.
True
> or False?
>
SOON AFTER RECEIVING MY LUMP SUM AS YOU CALL IT, I CONTACTED AL ABERNATHY,
AND ANNOUNCED ON THE 3894.5 FREQUENCY MY DESIRE TO RETURN THE GIFT MONEY.
I MADE SEVERAL ANNOUNCEMENTS OF SAME ON 20 METERS. I ALSO CONTACTED
CPT. CARROL, WHO WAS MY INITIAL CONTACT IN THIS MATTER. HE SAID HE DID
NOT HAVE A FULL LISTING OF WHO GAVE WHAT. HE SAID TO TALK TO AL. I DID
SO AGAIN, ON THE L/L THIS TIME. HE REFUSED TO GIVE ME A LIST, IN FACT
TOLD ME TO FORGET ABOUT IT.

MARTY CHITTUM SUGGESTED I DONATE IT TO A VETERAN'S GROUP IN THE NAME OF
THE ARG. I FLAT REFUSED. I WILL NOT BE PART OF THEIR USING A VET GROUP
TO BETTER THEIR CAUSE. I OFFERED TO SEND THE MONEY TO AL OR CHARLIE, OR
ANYONE THAT WOULD GIVE ME A LIST OF THOSE WHO DONATED. TO THIS DATE I
HAVE RECEIVED NO LIST, I WAS MADE AWARE OF TWO PEOPLE THAT HAD DONATED.
THEY EXPRESSED THEIR DESIRE TO HAVE THE MONEY RETURNED. I DID SO, IN
PERSON AT THE BIRMINGHAM, AL HAMFEST.

SHOULD I EVER GET A LIST, OF WHO AND THE AMOUNT, THEN I SHALL RETURN THE
GIFT, IF THEY WANT IT. IVE SAID THIS MANY TIMES ON THE AIR AND AM DOING
SO AGAIN IN WRITTING.

> 17. You are too scared a WB2OTJ and the other Good Fellers to ever even

John-

I'm not familiar with your PVC antenna, but you can purchase a bracket
that allows you to mount two mobile antenna whips as a dipole. With two
75 Meter whips, the total length is around 15 feet.

A good starting point would be www.arrl.org also go down to
Radio Shack and get a study guide. Your gonna laugh. Find the
local ham club, get 3 VE to test you and your back on the air.

As I understand it, after you achieve your General ticket and get
your "new" call, you can apply for a "vanity" call. Think after
Sept the rates are going to 12 bux or something. They will likely
be able to re-issue it since its not been issued and you are a
previous holder. Again the arrl.org has all this info for you.

Welcome back, but stay off of 75 at night and 20 in the day.

I like that, and wish I would have thought of it. Increase passing grade test scores on written tests from 70 to 90 percent. I think it's needed. Nothing pisses me off more than when I hear a couple of no code techs QRM'ing satellite operations because they're too stupid to realize they're transmitting FM in a satellite passband. If they studied harder they would be aware of these things. Current code requirements on upper class licenses are good because people generaly spend more time studying before they try and pass the test.

ARRL proposal is DOOM & Gloom for ham radio and the ARRL Idiot board members don't speak for me either.

Sounds like a Daylight Saving Time conflict. Your puter or the other guys has adjusted for it. Windoze mills use the zone description GMT rather than UTC in the system, BTW. Just do a time check on WWV or BBC at the top of the hourto make sure you currently use the correct offset. I use GMT on my machine, since I cross a lot of time zones with it at sea and GMT is used in SWLing, Hamming, and navigation. Set your clock, and select the option on control panel to NOT adjust for DST. This assumes you are running 95/98.

Hope this clears the fog.

Did you want to work on My airplane? Maybe that is the difference here. Many don't wish to operate OOK but are forced to learn Morse anyway. You were tested because lives did depend on you knowing your job. You also got paid for both learning and working. No one here gets paid for beeping nor learning to do so. Look again and you may actually see the problem and it has nothing to do with your chair.

What you've said is you have to try every frequency on your radio before
you used it to call the police - not what I would call reasonable
effort. I would refer to that as extraordinary effort. A reasonable
effort would be all that is necessary.

That would certainly be necessary for you and I, but to legally contact the
police, ALL FORMS of communication (including each frequency) must be tried
FIRST.

That's the way it is -- Part 97 states this.

2848. EMERGENCY POWER GENERATOR INFO

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-31 00:00:00 UTC
From: no-e-spam@thankyou.net
Message-ID: <35ed0477.9077592@news1.banet.net>
Source record: 163079

I recently put up a few pages on the subject of emergency generators. Included in the pages are tips on the different types of generators/fuel combinations, application charts to determine what size unit you need, safety, wiring up your portable, and over 50 links to engine and generator mfrs, and sales and service outfits.

The link is:

http://agitator.dynip.com/agitator/juice_page.htm

Check it out.

2849. J Pole Antenna Plans needed!

Newsgroup: rec.radio.amateur.misc

Source record: 163081
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc

Fred, is the antenna a helically wound 1/2-wave dipole ?

If so, use my program HELICAL3.exe to design a 1/4-wave helical antenna (intended to be fed against ground) and then put a pair of them back-to-back. Feedpoint impedance at centre of the dipole will be twice that of the quarterwave when the ground loss resistance is zero. Program computes wire size, winding pitch, number of turns for given length and diameter of the pvc drain-pipe helix.

Instead of feeding the helical dipole with a balanced feeder it would be better to connect the two halves directly together and use a coupling link of a few turns over the centre and feed it via coax.

Also available is program VERTLOAD which will assist with design of a 1/4-wave helix by appropriate proportioning the lengths of the mast, loading coil, and top rod. Put mast height = zero and use a very long coil former.

Should provide interesting results when installed in an attic.

Progs download in a few seconds. Not zipped-up and ready for immediate use. What-if design procedure. Click below and amuse yourself.

> How can you be threatening me when you don't even know who I am? HAW HAW HAW!!
It called a friendly warning. If you percieve it as a threat, then act upon it appropriately. Just be prepared for the consequences when it is proven who was doing what.

Besides, in your last posting, you said that you were going to cut me a break? Now here we see that you ahve already violated this annoucement (its called LYING). You are now proven to be a liar. So, your credibility is now damaged (by your own mouth, no less).

Slink away, O CBRambo, Slink away! We are done here and you have lost.

i NEED HELP IN SOLVING A TELEPHONE RFI PROBLEM-

I'M using an FT840 running to an antenna tuner and up to a 40 meter full wave loop antenna--i get out wonderfully but when I talk, I come thru the telephone in our apartment and also the telephone switchboard in the Motel where my wife and I live.

If you have any suggestions or have had a similar problem, please let me know how you solved it.

thanks, Dave, N1WAY

Yes it is. If you would like to take an exam simply go to the fire station at the intersection of Auto Mall Pkwy and Grimmer Blvd in Fremont, NH. Finding the session is the first element that you must pass. Good luck.

We had the same problem here where I live! I work at a TV station that did a story about a C.B. operator who was causing problems to his neighbor's TV's, radios, cordless phones, etc. The C.B. operator has a big antenna and a C.B. for the 70's, and he is probably running illegal power, although he claimed in the interview that he was running only 4 watts (If you believe that I have some oceanfront property in Arizona to sell you). Funny thing to me is that when our camera man asked him to turn on his wattmeter to prove to him that he was only running 4 watts, he claimed the wattmeter was broken. I would contact my local authorities, such as city council, etc. Good luck getting the FCC to deal with a renegade C.B.er, because it probably ain't gonna happen. Good luck though.

H I H I W A R N I N G

O F F I C I A L K 1 O I K N O T I C E

You have used the word "hi" or "HI HI" in an inappropiate way.
HI HI is properly uses on CW (code) to indicate something funny. In text
you can say "ha ha" and of course on voice you would sound like an idiot
if you say "HI HI."

Your punishment is to say 5 lines of HI HI, text follows:

HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI

That was on August 2, 1997, long before you became insulting.
I said challenging things about the hobby but you were essentially non
responsive to my challenge.

You are the one who wants to
> debate everyone so why did you not initiate a debate when you had the
> chance? You blew it and you have to take it out on others. Poor,
> poor Burt. HI HI

I did but I cannot talk when you were non responsive.

Why are you so
> adversarial Burt? Not with just me but with everyone?

Only as it relates to ham radio.

> It has come to the point that I enjoy heckling you on the net.HI HI.
> I know it bugs the ever living stuffing out of you.HI HI.

Not really. This is the internet, it means little.

You can
> dish it out but you can't take it. I have your goat tied up in my
> back yard and you can't stand it can you? HI HI.

The only thing that upsets me is false postings of fact.
As far as I recall you post opinions but you do not say
I killed anyone. Name calling is not a problem as long
as it looks like opinion.

Anyway, I have no rhyme or reason to
> even think about wanting to touch you. Ewwwwwwww! HI HI

Mutual.

> Whatever town my truck happens to drive to...mostly all of them.
> If I happen to see you you will get your due respect. If I don't see
> you I will just have to reserve it for when it does happen. Needless
> to say, no matter what you say or how you put it, you will not cause
> me to go out of my way. I have a life and it doesn't involve
> you...except for what I post here. If we do ever meet it will be a
> coincidental thing. You're just not that high a priority on my "Have
> to visit list."

My feelings match yours above.

> Is it because I have no guts? Not in the least. I could care less
> about peoples' guts...something you seem to be obsessed with. Do you
> frighten me? A little bit. You appear to be unstable and that does
> worry me somewhat.

Your guts is in question because you never will say the things you say here to
my face or on the air. And that really takes little in the way of guts.
Why would you fear me?

> Anyway, if you don't wish to be harrassed on the Internet....stop
> doing the harrassing...otherwise I can keep this up forever. HI HI

Please visit my World Wide Web Site, you have never seen a page like it.
You will see:

1. See Hillary do something naked.
2. A blond naked chic.
3. Attacks against Burt K1OIK's opinion of ham radio in a national publication
for broadcasters
4. Burt's opinion on the First Affair in the White House with a picture of the
new fist couple.
5. An actual picture of Burt on the throne.
6. The writings of me and others on ham radio, hear a typical ham contact.
7. The warm side of K1OIK, hear me speak, see me with famous people.
8. A test for your SVGA monitor

9. Pictures of me and my family.
10. Did common German's enable the holocaust?
11. See now the future of ham radio.

Well, whaddaya know? Someone has mysteriously changed the Web page that Covert62 made reference to last night (http://www.users.uswest.net/~proudhawk/.)

By sheer coincidence, the picture of the white male on the page has been removed, as well as the callsign reference. In addition, no mention is now made of the individual being an amateur radio operator.

Unfortunately, I was in a hurry to get somewhere last night and failed to save the original page. But I'm sure somebody has it and wouldn't mind posting it for our reference.

I tell ya what, OYE BOY. I've been thinking about it, and I'm gonna give you a break this time. I think I've proven my point with you...that you're still as gullible as you ever were. Within a matter of a few days, I flushed you out, got you to make baseless allegations, had you evade my questions, and finally...as you always do...threatened to report me to AOL and other such nonsense. Same old OYE BOY. Nothing's changed.

Here's a tip for being happy and successful in life, OYE BOY: learn how to IGNORE those whom upset you. Turn the other cheek. Look away. Do something else. And sheesh...get a life and STOP sitting on the Internet all day, waiting for someone to post something negative about you! There's a whole world out there, OYE BOY. Go enjoy it. Forget the past. Live for today. Smile a little. You'll feel a whole lot better about yourself.

Take my advice. Don't respond to this post. Don't respond to any of the others. Turn and walk away. That's it. You can do it. Keep repeating to yourself "It's just a computer...it's just a computer..."

Perhaps someone else wants to go a few rounds with you, but I'm done. Like I said, I have proven my point with you...and I'd like to thank you for providing me with good, cheap entertainment on what would have otherwise been a rather boring weekend here. But it's been fun and I gotta run. I have a real job I need to attend to and don't have time to play on the computer all week. Have a good life, OYE BOY, and remember what I said above...take deep breaths..."it's just a computer, it's just a computer..."

Bye, bye, OYE BOY!

"Where's that big 'ol CB RAMBO??"

> Hello Robin, Dan here. I have the MFJ 1025 and I say it is fantastic. My
noise is mainly a high intesity powerline noise. The MFJ totally wipes it
out. My level of crap is, at times, s9 (on a FT1000MP meter). That is
rather stout. I have not tried it with the noise you describe, however I
would say it will likely work, since all the MFJ needs is a steady noise
source to elliminate it.

In your apartment, I would recomend you get one with the built in pre-amp
and try it with a small indoor antenna. The MFJ must be able to hear
both the desired and un-desired signal.

Good Luck

The Comet SMA-503 is a much better performer than the stock antenna. It is available at Ham Radio Outlets nationally.

That ugly antenna that comes with the FT-50R isn't as horrible, say, as the stock VX-1R antenna...but the Comet SMA-503 is a better performer. You can use it, of course, on both your VX-1R and your FT-50.

So RS does not see it as advertisement and does not think of the sales potential when they sell the catalog?

> The monthly mailout that is targeted to customers who volunteer their names
> and addresses are significantly more effective advertising than the catalog.

> was the only year that RadioShack charged for the catalog at the RadioShack
> store. After that they have a policy that the exchange of name and address
> information for the mailing list was a fair price for the catalog.

If the latter is true, then why did I never receive anything from them? I once was stupid enough to give them my name and address when I spent a couple hundred of dollars that day. No free catalog, no mailing.

Besides, it's really not wise to give RS your name and address for the very simple reason that they are dumb enough to print your name on the receipt. When you pay by charge card and loose the receipt then a mean spirited finder can make some nice purchases over the phone or internet. All they need is name, credit card number and expiration date.

> Use what money to plant trees? The money that they earn from the sale of the
> catalogs? They don't make any money directly from the sale of catalogs.

Yes, the money for they get for the catalog. I think it would be a fair trade to give mother nature some trees back in exchange for sales.

> In
> fact the costs of the catalog are a lot greater than the profits made from
> selling them even if everyone produced were purchased.

That's an often used argument, which is not true of course. If the catalogs would not help the sales, then I'm sure RS would not be investing in them. If they really give them away to be nice to their customers, don't you think that's because they want to see the customer return to their store?

> If you are concerned
> for our environment then take your old NiCd batteries to them to be

You would have to try EVERY FREQUENCY before LEGALLY using the radio to
contact the police.

You may only contact the police ON THE RADIO **IF** there is life in danger,
AND you are a validly licensed amateur operator, AND you've tried EVERY
other type of communication, in this case, every frequency on every
transmitter.

I don't know when the first CW transmitters were used, but I do know that
CW didn't become routine for amateurs until the mid-1920s.

>I am pretty sketchy on the alternator method of generating CW, and had not
>realized that this was actual CW. I thought the first use of CW followed the
>inventon of the triode.

Yeah, the alternators produced CW. They were multipole, so they didn't have
to turn at the cycle rate, but of course it was still pretty low frequency stuff,
and was used primarily by commercial stations. Amateurs operating on 200
meters and down had to wait for vacuum tubes to become cheap and powerful
enough to let them operate CW. That started to happen after WWI.

Source record: 163134

"Michael Brown wrote in message
<27160-35EA628B-1@newsd-112.bryant.webtv.net>...
We had the same problem here where I live! I work at a TV station that did a story about a C.B. operator who was causing problems to his neighbor's TV's, radios, cordless phones, etc. The C.B. operator has a big antenna and a C.B. for the 70's, and he is probably running illegal power, although he claimed in the interview that he was running only 4 watts (If you believe that I have some oceanfront property in Arizona to sell you). Funny thing to me is that when our camera man asked him to turn on his wattmeter to prove to him that he was only running 4 watts, he claimed the wattmeter was broken. I would contact my local authorities, such as city council, etc. Good luck getting the FCC to deal with a renegade C.B.er, because it probably ain't gonna happen. Good luck though."

We have gotten the FCC on the ball. Congressman Peases forced them to help. Go to your congressman, make sure the complaint is in writing. The congressional offices can only do something if it is in writing. And they must respond in 24 hours!

Have several witnesses swear out a complaint to the US Attorney. It is no different than going to your local prosecutor. He will have to file a request for help to the FCC.

The more congress hears about the problems, the more likely they will fund the FCC to do something about it. Make the government take the CBers house the way they do for drug offenses. If there is money, they will come.

2904. Learning Morse to music - re-post

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-31 00:00:00 UTC
From: "Gary R. Hoffman" <gary@carcs3.wustl.edu>
Message-ID: <35EAB1DC.41C67EA6@carcs3.wustl.edu>

HAW HAW HAW!!!

Nice work, Covert!

Whoops...caught you again, eh, OYE BOY? God, if I looked like that, I'd be
embarrassed to post a picture on my Web site. Get a load of that FAT GUT...and
those BOOBS! Man, you're carrying around a belly of blubber like that and
wearing a "U.S. Swim & Fitness" T-shirt?! Obviously, you've never set foot in
the place. Lay off the Twinkies, OYE BOY, and get some exercise. It would do
you a world of good. Man, that's disgusting!

Hurry up, everyone, and take a look at this before OYE BOY removes the evidence
from public view. Maybe we should call you SOW BOY from now on. HAW HAW HAW!
You lose again, SOW BOY!!

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

We have had a problem with a certain CBer in our community.
He is operating a Galaxy CB that is supposed to only be sold
out of country. From what I have heard, he running nearly 1500
watts output.

What is getting him in trouble in that he has RFI into devices
all over his neighborhood. What makes it worst is that he is
very foul mouthed. That is were the city came into the mess.
The neighbors complained. So the city attorney (a friend)
went after him. The CBer even got his picture in the paper.
He said his station was "legal".

Well, the city found the FCC less than willing. So they go to
the local congressman (congressmen have to respond to any
complaint in 24 hrs if it is in writing). Now the FCC is interested.
A local Motorola shop is providing support to make the case. Of
course they do work for the police department and want keep their
business.

My suggestion was that once the case was made by the commercial
radio technicians (GROLs), that the packet be sent to the US Attorneys
office. That would put even greater pressure on the FCC.

When you calculate UTC from your local time are you taking into account
Daylight Savings Time?

>I go somewhere around 7.336 to get UTC time on my HF rig. What's the
>problem??

10 - 7.336 = 2.664 and 7.336 - 5 = 2.336 -- I wonder if you've got
a strong broadcaster in your locale operating on either 2664 or 2336
kHz? Another possibility: 15 - 7.336 = 7.664 -- maybe there is a
shortwave broadcaster at 7664 kHz whose signal is mixing with WWV's
15 MHz transmission and causing a spur at 7336 kHz in your receiver.

2928. mobile radio electrical system noise

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-01 00:00:00 UTC
From: Chris Ogren <cogren@east.sun.com>
Message-ID: <35EC3B0C.E0285781@east.sun.com>
Source record: 162887

I have an FT900 in my Jeep Cherokee. I am experiencing a fair amount of electrical system noise on the radio when the car is running. The radio is wired directly to the battery. Does anyone else have a similar problem and if so have you been able to clear it up or reduce the noise? It is as load as S5 sometimes. Sure can make weaker signals difficuly to hear.

TIA

Chris Ogren

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 01/2330Z SEPTEMBER 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 01 SEPTEMBER AND FORECAST FOR 02 SEPTEMBER - 04 SEPTEMBER
STATUS INDICATORS SOL:** YELLOW ** MAG:GREEN ION: GREEN

1A. SOLAR SUMMARY
Activity 01 Sep: Moderate

Flares Max Fadeout Begin End Freq. Sectors
M1/1F 0459UT Confirmed 0456 0510 lower Australia/East Asia

Observed 10.7 cm flux/Equivalent Sunspot Number for 01 Sep: 177/131

GOES satellite data for 31 Aug
Daily Proton Fluence >1 MeV: 2.4E+06
Daily Proton Fluence >10 MeV: 1.1E+05
Daily Electron Fluence >2 MeV: 2.70E+08 (moderate)
X-ray background: C1.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
02 Sep 03 Sep 04 Sep
Activity Moderate Moderate Moderate
Fadeouts Expected Expected Expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 02 Sep: 170/124
COMMENT: Potential for an X class event remains. Region is south
east quadrant continues growth, and is complex magnetic configuration.
Solar wind speed nominal. Bz northward.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 01 Sep: Unsettled to active

Estimated Indices 01 Sep : A K
Learmonth 14 3323 4332
Fredericksburg 10
Planetary 22

Observed Indices 31 Aug : A K
Fredericksburg 12
Planetary 22 3255 4432

2B. MAGNETIC FORECAST
Date Ap Conditions
02 Sep 10 Quiet to unsettled

03 Sep 15 Unsettled to active
04 Sep 12 Unsettled
COMMENT: Recurrence suggests mild increase in activity can be
expected 03-04 September, during local night hours.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
01 Sep Normal Normal Fair-normal
PCA Event : No Proton/PCA Event In progress

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
02 Sep Normal Normal-fair Normal-fair
03 Sep Normal Fair-normal Fair
04 Sep Normal Normal Normal-fair
COMMENT: Short wave fadeouts are probable on daylight HF circuits.
High latitude sites may have experienced mild degradation in
HF comms local night hours during interval 03-04 September. Generally,
HF conditions should be improving over next few days, with strong
solar flux and quiet geomagnteic conditions after 04 September.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
01 Sep 65

Observed Australian Regional MUFs:
Near predicted monthly values at northern region sites.
Depressed 20% southern region sites.
Spread F observed local night southern region.

Predicted Monthly T index for September: 89

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
02 Sep 85 near predicted monthly values
03 Sep 85 near predicted monthly values
04 Sep 85 near predicted monthly values
COMMENT: Southern region MUFs were forecast to recover
but remained unexpectedly 20% down yesterday. IPS HF
Communications Warning 52 was issued on 30 August and is
current for interval 31 August to 2 September (SWFs).
Short wave fadeouts can be expected on daylight HF circuits.

2930. Re: Question about aircraft using AM instead of FM

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-01 00:00:00 UTC
From: jstrohm@texas.net
Message-ID: <6sh31v$k6q$1@nnrp1.dejanews.com>
Source record: 162937

The most significant reason that AM is still used for aircraft communications is that when two AM stations key on top of each other, you can usually understand both signals -- or at least make out enough of both signals to know who was transmitting.

You don't have any of that with FM -- two signals of comparable strength will obliterate all intelligence on both signals.

You might compare the cacaphony of 11 meters (AM) with the cacaphony of 2 meters (FM) and see what you can make out when one station keys on another.

Jim N6OTQ

Your language lesson for the day:

caca-phony
caca- -- Spanish pejorative for feces
-phony -- of or relating to sound

They started this a few years ago. The original idea was to charge 3 bucks
for the catalog, then include a 3 dollar coupon with the catalog towards a
purchase.

I went in one day and spent like 300 bucks on a scanner and some other stuff,
and asked for a catalog. They refused to give me one for free!! I couldn't
believe it! I tried to reason with the guy but he said that they were
considered store inventory and had to charge for them.

AM is superior to FM for weak signal reception in the presence of
strong signals. The strongest FM signal captures the receiver thus
blocking out all other signals, ***even ones calling "Mayday".***
With AM, the receiver is not captured and a controller can hear a
weak "Mayday" or other urgent message in the background underneath
the strong signals.

>
>

The FCC can, assuming that quiet hours have been imposed as stated,
now issue a Notice of Apparent Liability, or suspend/revoke both the
operator and station license (operator is disregarding limitations on
station operation, station operated improperly), and then find a US
Atty in the proper region to take the operator to court. I also note
that if the station license is suspended, or quiet hours imposed, the
operator in question can't operate ala KV4FZ as there is no appeal
of the imposition of quiet hours implied in Part 97. I also note that
everyone forgets that every licensee agrees to allow FCC personel or
FCC designates inspect the station.

Jeff, on the North American mainland, CHU, a time and standards station operated by the Government of Canada operates on 7335 with a Carrier and the upper side band. I'm not quite sure how accurate the signals are in millionths of a second, but if he's checking his UTC against CHU, he can't be an hour off. BTW CHU is usually very easy to receive in much of the US, and I doubt that most people can get their clocks manually set more accurately with WWV or WWVH than with CHU.

Ryan - it does not say that. It says "when normal
communications system are not available". It is not
"normal" to try every frequency, channel, PL, etc. It is
not "reasonable", which would be the true legal test, to do
so since it would cause unnecessary delay in getting help.
Each case would have it's own circustances that would have
to be weighed.

> If nobody responds there, and you can't find a telephone or another human
> being, only then should you contact a PS agency -- IF you're a licensed
> amateur operator.

Again - not true. The rules go on to say make no provision
to prevent an amateur station from using any means of
communications to attract attention and make known it's
condition. It is often interpreted that "part 97 goes out
the window if you have an emergency" - you don't need a
license to make emergency transmissions.

Once again I'll ask. You stated that people are prosecuted
under these circustances regularly - can you give us ONE
example of prosecution of an amateur that used his radio
out-of-band in a bonafide emergency. Even that guy in
Southern California was never prosecuted - the local
authorities took his radio but he was never prosecuted for
anything and the FCC took no action against his license.
And that was certainly a questionable situation. (A bonafide
emergency but it was doubtful the amateur had made a
reasonable attempt to exhaust normal amateur communications
- THAT ended up being the issue, not the simple fact that he
called the sheriff on their frequency.)

Hello Dan,

You could try to put 10000 pH capacitor parallel to the phone. If it is not enough, you could add 680 uH RF chokes to the both wires between the phone and the line, also in this case a 10 000 pH capacitor parallel with the phone. Another way is to put ferrite beads in both wires between the phone and the line.

I hope some of these will help you.

New phones containing semiconductors can be quite difficult.

In QST in the back section there used to be an add for a company that sold little blocks that would plug into the modular jack for RFI suppression. I teach a class at the FAA Technical Center in New Jersey on RFI Identification and resolution and we have a section on audio rectification. This is most likely what you are suffering. You can also go to Radio Shack and they sell Ferrite RFI blocks that you can use to wrap the phone line around and this may help the the problem with the RFI to the switchboard.

Hello Mr Pedo.

I am a little curious as to how you determined the class of license held
by those who "pissed you off". Maybe you were so driven you copied down
the calls and checked the database. Maybe so. Was there a method by
which you could have just let them know they were screwing up your
efforts. In the good ol days, one of the real 1X2 guys would tell you
in a hurry when you stepped on somebodys toes.

Current code requirements on upper class licenses are
> good because people generaly spend more time studying before they try and pass
> the test.

And getting real good at Morse would have been all we needed to prevent
the offenders from doing so? I would like that explained a tad better
if you wish it to be believed.

>
> ARRL proposal is DOOM & Gloom for ham radio and the ARRL Idiot board members
> don't speak for me either.

I have problems believing you would acknowlege anyone speaking for you
unless they totaly agreed to every thing you happen to like. Who do you
suppose in todays world that would be?

Good luck but you are in a very narrow corridor and support of your
concerns will be spasmodic and short lived at best. Too bad we can.t
all think alike isn't it?

If you feel that way, e-mail your comments to the FCC. The more people that
speak against the ARRL, the better our chances of saving CW and maintaining
the current standards and our amateur radio bands won't end up like 11 meters.

ARRL Betrayed us!!! SAVE CW!

Hey I didnt think of that, but you and that other poster are probably
correct about why their still on AM mode. Really neat....Only problem
I have with that is this....why still send the carrier, why not use
scssb ?

Oh and another thing, I just knew you couldn't resist taking a snipe at my mentioning my nam time. Kinda pisses you off don't it. What....you dont know what I mean? Poor little puppet.

That's EXACTLY how I read that rule also.

The rule doesn't say someone can transmit out of band and it doesn't
say they can't. And if they decide to transmit out of band, then
whatever law get's thrown at them, it will not be a Rule 97
violation. So when they try to defend yourself, they needn't even
bother mentioning that you hold an amateur radio license, it won't
affect their case either one way or the other.

Hams have no better or worse rights than someone with no license,
when it comes to helping in an emergency by transmitting out of the
ham bands. But they may have have far more to lose if it's the FCC
who comes after them for violating the rules of another FCC Chapter.

Regards,

Subject: I want you, KC8JBO!
From: the_real_libnet@my-dejanews.com
Date: Tue, 01 Sep 1998 02:19:45 GMT

KC8JBO, my sweet friend! How I've wanted you! I was going out with
Andrew Cunanan. He two-timed me for all those victims. I know I'll miss him.
Let's not dwell on it, though. How about I stop by your house later tonight.
We can spend some time together.....maybe I'll give you one of those backrubs..
I'll be gentle. Not like I been on the newsgroup.
I'm sick of my Radio Shack boyfriend and that bitchy manager at Domino's.
Mr. Man don't treat me right anymore. I think he's seeing his boss on the side.
Call me collect if your interested, darling. I'll leave the pizza making outfit
on.
See you soon.

the_real_libnet said that!

Read what you wrote. It's silly on the surface. Even assuming that you
meant to say "a contact on one frequency does constitute a singular form
of communication" it's silly, as the FCC itself could not specify types
of communication such as A3A without a frequency attached.

To my knowledge, Karl is no more a lawyer than I am. The way it was explained to me, "these rules" in that context means 47 CFR 97. And yes, it was explained to me by a lawyer, who led me to believe that "this section" or "this Subpart" would have been used if only Subpart E was meant.

Text of the citation:

There are many instances where hams have used modified
HT's to contact police on *their* frequencies. In most cases,
the ham's HT is almost always confiscated and he/she is
charged with violating the laws applicable to transmitting on
their freqs. After many hoops and dodges, the charges are
dropped and the HT is returned because the ham *really* didn't
violate any laws. However; it should be noted the one should
always try to use *legitimate* means first, and transmit on *their*
frequencies as a last resort - you may cause more harm than
good. Of course, with the new trunking systems, I'm not sure
it would do you any good now anyway.

>
> How's that?

Poor. The first one says the writer thinks he recalls a case where the
ham might have been prosecuted, and the rest go downhill from there.

The Southern California Emergency Response Institute, a conference with valuable information for emergency responders in government, business, industry and volunteer service, will be held October 10-11, 1998, at the Ben Clark Training Center, March Air Force Base, Riverside, California.

Seminars, forums, exhibits and demonstrations are all a part of the Institute, which has been held for the past several years in Northern California, but is for the first time being held in a location convenient to Southern Californians.

Registration is $35 for both days; accomodations are available on-site or locally. ERI is sponsored by the State of California Governor's Office of Emergency Services Auxiliary Communications Service, and by the Riverside County Fire Department Radio Amateur Civil Emergency Service.

Further information and registration forms can be obtained from the web site: <http://www.qsl.net.races/eri/>.

2972. Marine SSB Rig OK on Ham Bands?

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-01 00:00:00 UTC
From: windbrkr@erols.com
Message-ID: <MPG.105668e4c2844e589896d0@news.erols.com>
Source record: 162979

A friend of mine just got an Icom Marine SSB rig for his boat. He has not yet gotten the permits for the rig, and in any case, his sailboat is in drydock just now. I believe FCC regs stipulate that boaters may only use their rigs (HF or VHF) when afloat. Although my friend will have his rig rig installed on the boat before the end of the year, he probably won't have the boat in the water until March or April, '99.

He's asked me to check the rig out to make sure it's OK, to use it on the air, if at all possible, and "burn it in" while the warranty is still fairly youthful.

I don't know of any problem with using a rig that is only type-approved for marine SSB use on the Ham bands (I understand that the reverse is not necessarily true), but I wanted to check with the collective wisdom here first.

Given that his rig is capable of transmitting and receiving SSB / CW / FSK on frequencies allocated to the Amateur Service (I don't yet know this for sure), should there be any problems? Any comments welcome.

Thanks, Bob K9CMR

http://x11.dejanews.com/getdoc.xp?AN=384661544&CONTEXT=904659991.95223835&hi
> tnum=9

A story from someone about "someone" that he thinks called the police
over "soemthing" and he thinks was prosecuted by the feds. It may have
been 15 years ago. I could make up a story like that. Would it be
fact?

http://x11.dejanews.com/getdoc.xp?AN=383365056&CONTEXT=904659991.95223835&hi
> tnum=10

This one sounds like the southern CA case. Apparently that ham did not
make a reasonable attempt to try something else first. And he was NOT
prosecuted. The story goes that he avoided prosecution by surrendering
his radio - I wonder what would have happened should he have chose to
take a chance in court, and if the local authoirties would have taken it
that far.?

No prosecution.

> http://x11.dejanews.com/getdoc.xp?AN=383370857&CONTEXT=904659991.95223835&hi
> tnum=20

Another story like yours that just says "it happens all the time".

>http://x11.dejanews.com/getdoc.xp?AN=383551810&CONTEXT=904659991.95223835&hi
> tnum=26

Not even close to an example someone someone being prosecuted.

http://x11.dejanews.com/getdoc.xp?AN=383596445&CONTEXT=904659991.95223835&hi
> tnum=27

An irrelavant story about a fireman that stole some 800 MHz gear.

> Other good article:
> http://x11.dejanews.com/getdoc.xp?AN=384002764.1&CONTEXT=904659991.95223835&
> hitnum=25

Great article - but it doesn't support your position.

> How's that?

Well Ry - it sucked. Any idiot could have told DejaNews to search for
the word "prosecuted" in a newsgroups and come up with a list of posts.
But if you want to use them make a point you should read them first.

Regards

I saw that one. It is worth noting that radio manufacturers have been using the phrase "today's crowded bands" in their ads since the mid-1950s. I have a Hallicrafter's promotional poster for 1959 that extols the selectivity of Hally receivers as a remedy for. . .:"today's crowded band conditions."

He wants to go the other way, so he'd need to tap into the microphone
circuit. Same idea though, you should be able to connect in the
transformer either in series with the mic element, or in parallel (with
a capacitor in series with the transformer). I think most phones use a
electret mic with a built in FET, but the same idea would work with a
carbon mic, too.

Another thought. This is the same sort of circuit as a "Music on Hold"
adapter where you can connect a radio or other source to the phone so
it plays when you're holding someone.

Well Mr. Photon phallic symbol,

I honestly do not know what studying code has to do with studying tech, but why not post it on the proper newsgroup. As for QRM'ing SatOps, which one? AO10, FO20, FO29, RS15? Can't be RS12, its back to mode KT, so you are hearing those high speed extra ticket folks walking on you.

Meanwhile, take your own advice and study.

You missed my point. You say he was first licensed in 1998; if that were so, the expiration date would be 2008. But the expiration date is 2002, so he's had to have been licensed prior to this year. Can you determine, from the data above, when he was first licensed?

I think we should go after jammers like we do drug dealers. If the
jammer is located on the property then all the property associated
therewith should be seized and sold to pay for future anti-jamming
efforts. That would provide a revenue source for the FCC enforesment
actions we want.
Just taking away someone's license is very minor with taking away
their home and cars and all items found on the property ... jewlry,
clothes, cash, etc.

>dimension (thanks to politicians and lawyers IMHO).
>
>Steve
>WB7PSD

Dear Steve,

Your comments here reminded me of a lecture on search and rescue
that I attended a few years ago in Sydney.
The lecturer went into great detail about how the search aircraft
followed tried and tested routines according to winds and tides
that could sweep the stricken ship into a particular area. This
search area would expand day by day requiring more aircraft
to cover the expanding search area.

I put my 2 cents worth into the discussion and said why not
call up the ship on ch16 VHF(marine distress and calling).
Cant do that. I was shouted down. Aircraft do not carry marine
VHF sets. OK then, take one with you , I replied.
Why waste time and fuel looking unnecessarly when you
can talk to the people you are looking for, I said.
I was shouted down again.
Someone yells out that there is a limit to what can be carried
on a hercules and caribou.
I am only asking for a hand held transceiver to be
used on ch16 marine fm vhf . I said.
No No No was the overall opionion of the experts,
it is against the law for an aircraft to use ships radio
channels.
But this is an emergency situation, I implored.
The Lecturer by this time was getting very annoyed.
Go and see a politician. I cant change the law, he said.

Years later, I was on a large Sweedish oil tanker doing
some work on the radar console next to the chart
bench. Neatly installed in the depths of chart table
cupboard was a aircraft vhf set, wired up and ready
to use. The captain saw my interest.
To Hell with the policians , he said,
There was no mention of politicians from me,
he had been down the same road and done
something about the safety of his ship and crew.

I have a lot of friends that are ex radio officers
and have never heard of any incidents where
a marine vhf fm set on channel 16 that was
being used in an emergency situation has been
blotted out by a stronger signal.
Perhaps due to less traffic in the marine environment
that capture effect is not a problem.

Hi!

SO when I get thsi straight, there is NO SENSE in using 2 equivalent antennas side-by-side as MFJ suggest would be the most ideal solution to use the MFJ???

It sound logic to me that, if you put the disired signal as well into the 'noise antenna', that this would be eliminatied as well.

But what does MFJ mean then with this 'ideal' situation??? And do i have to connect an antenna to 'every source of noise', let's say an antenna for my neigbours TV, one for the powerlines 2 blocks away... If you get my drift.

What's the truth here. Do they REALLY work, or must I take so much effort to solve several problems.. Or??? IS it ment to be for one very aggresive noise only, as these stories suggest?? SO that it cannot be used as an 'universal QRM killer' but one to kill a specific annoying QRM?

Any suggestion is very welcomed

Thanks!

Kees van Engelen (The Netherlands)

>thanks, Dave, N1WAY

Dear Dave,
I am in Australia and I have the same problem.
I posted a message in uk.radio.amateur on the
same heading INTERFERENCE TO Neighbours.
Some replies came in, but nobody with direct experience.

I had TELSTRA our phone company come out
and partialy fix the problem.
They have special RFI resistant phones for customers
that live close to airports and radio broadcast stations.
On my initial enquiries to my phone company they did
not want to have anything to do with the problem. They
considered the problem was all mine and did not know
about the special phones.
I spoke to the Australian equivalent of your FCC and got
good advice. It was: tell your phone company that a phone
is an audio device and it has no business acting like
a radio receiver, therefore please come and fix it.
That approach got some action and has fixed up
most bands. 14 MHz can still be heard slightly.
I still want a complete cure for my neighbour, so I am
still experimenting with the phones in my house.

The neighbours can hear me on their Hi Fi stereo set also
but they do not want me near it to try and fix it. They want
me to shut up.

I will keep in touch

Do you get storm surges there? Also a hurricane with 75 mph winds is a
weineecane.
Wait till you get one of your 150 mph t-storms and see how you do. We
had a hurricane here in Houston in 83, Alicia was it's name. It was a
pikercane at a measly 115 mph. Still it managed to do millions in
damage. Trees fall over like sticks. Have you had a tree split your
house in two yet? It's loads of fun. Then if you live on the coast , you
get that plus a wall of water that takes the rest off. In Alicia, in
downtown Houston windows were blowing out of the skyscrapers, and the
glass was falling stories down to the ground. Yep, thats right, raining
huge sheets of glass. Cut you in two like a machete. If we ever get a
BIG hurricane here , it will be a disaster like you've never seen. Just
in the pikercane of 83 , workers stayed busy for weeks just cleaning up
the fallen trees,windows, air conditioners, houses,etc. So it is a big
deal to the people that have to ride these things out. Also, tornadoes,
many will spawn in the hurricane area. As one who has ridden out many
tornadoes in Kansas, those are no fun either. So the combo of both is
quite a mess. Pound for pound the tornado worse, but the hurricane will
wipe out the whole town where the tornado might get a few houses. We get
those same strong thunderstorms here too, but really no comparison to a
big hurricane. MK

Well, 97.403 does specifically say "any means of radiocommunication". So
smoke signals would probably involve a one-time transmission. :-)

Multitude of possibilities.
1. Are you using coax or open wire line?
2. How far is the antenna/feed from ANY telephone wire?
3. What is the actual SWR without a tuner, if using coax?
4. Are you and the switchboard grounded properly?
This is just the beginning.

Baby Huey is ex KB2UEE, now KF3AB. David Casper. He showed up on 14313 and various 75 meter frequencies a couple years back. He was famous for his LOOOOONG monolouge type transmissions. His religious commentary, and outright jamming for hours on end reading from his "bible". He is a air traffic controller. Now you know why I refuse to fly anymore.

He also has (allegedly) agreed to participate in disrupting further the 3901 frequency. As if it need's anymore help.

In a blissful ignorant state <6sflhr$2vs$1@nnrp1.dejanews.com>,
the_real_libnet@my-dejanews.com pounces on planned typos and blubbers:

<nothing of any importance or relevance so
.....................................snip>

Hey Libnet, SPANK from Dejanews, huh, is that why you had to change your online handle? Pizza boy manger suckboy. All you deserve is the form:

Dear Moron:

What makes you think I give a rat's ass what you and your scummy loser, sick, perverted freinds think, not that you have any freinds. Your sort should be lined up and shot, or slowly roasted on a spit with snakes gnawing your balls, or buggered with a mutant vegetable while watching reruns of Oprah.

You think you're so SMART, don't you, you sad fag lover?
Now why don't you quit jerking off to Playgirl, rubbing up little boys,fondling the neighbour's cat and stop stinking up the bandwidth and bothering us REAL men. And while you're at it, get a life, buy a clue, change your diapers, ride a real horse and change the leaky rocker box on that rust-bucket you call a car, you sad, sick, scum-sucking son-of-a-bitch.

HTH, FO and Have A Nice Day...

I understand that the use of AM and not FM in aircraft is basically a "hold over" from the good old days, when everything was basically AM or CW. Why the aircraft industry has never changed over to a more compatable FM is beyond me.

The military also had a similar problem. Maybe they still do, I dont know. But in Nam when a combat air strike was called. The communications between the ground and the air Forward Air Controller was done by using a jurry rigged PRC25 Army backpack radio. Communications from the FAC and the jets was done on aircraft frequencies using AM. And commo from the FAC/JETS was either via a relay system from the FAC to the rear area, or at times if the strike was close enough directly from the FAC/ attacking jets to the DASC (Direct Air Support Center). I would hope that thing's are better now a days..hi.

Dropped by the local Shack today to pick up the latest flyer and
noticed the new 1999 catalog. The owner said he had to charge for them
because he was charged for them. I didn't get one. On the way back to
the car I thought "You probably have to pay rent for the store so why
don't you set up a turnstile and charge everyone a quarter to enter ?"

Oh well, there are probably other local stores who WON'T charge for
the catalog.

i have for sale an ASTRON RS-70M power supply.
it does about 57 amps continuious.
in great shape.

asking $235.00

also I have for sale a IBM Model P350.
it's contents are as listed: 3.2 gig hard drive, 64 mb EDO ram, S3 video,
18X cdrom, 3.5 floppy, 1serial, 1 parallel, 2 USB ports, Mouse, keyboard,
Manuals, software, just about 1 yr old. it's in mint shape cosmetically, and
runs like the day it was built by IBM, (sorry monitor not included)

$650.00

UTC/GMT knows no Daylight Savings Time. When we enter
daylight savings time and change back to standard time,
the UTC time stays the same. You DO NOT change the clock
you use for UTC.

> 'noise antenna', that this would be eliminatied as well.

That is true. Your signal receiving antenna is picking up signals and
some local noise. Your noise antenna is picking up a lot more local noise
than signals. When the noise is equal in magnitude and opposite in sign,
thus cancelling the noise, there will be some signal left over to be
received.

> What's the truth here. Do they REALLY work, or must I take so much effort to
> solve several problems.. Or??? IS it ment to be for one very aggresive noise
> only, as these stories suggest?? SO that it cannot be used as an 'universal
> QRM killer' but one to kill a specific annoying QRM?

It works on LOCAL noise only. It cannot separate far-field noise from signals.
However, if one's signal antenna is horizontal and one's noise antenna is
vertical, it can work well on vertically polarized noise, the most common
local QRM.

Quite true, Gary, but your computer doesn't know that, and a Windoze machine, just trying to be helpful, by default adjusts for DST. We know that UTC or GMT are never (actually they ARE adjusted but not an hour twice a year, and you will never notice unless you are an astronomer or a navigator) adjusted, but your computer does not know this, right out of the box.

From Karl Beckman:

... "97.403 applies ONLY to
"these rules," that is Subpart E entitled Providing Emergency
Communications. It does NOT allow operation outside amateur bands, and
it requires that normal communications be out of service due to natural
disaster before "Out of class" operating priveledges apply. Note that
we're not talking about the original Communications Act of 1933 - that
has long since been superceded by 47CFR, which is itself regularly
updated and modified.

Separate rules, NOT part of Part 97, apply to operating on the public
safety frequencies in question and the issue of type acceptance. They
ALL are binding!"

Rich, Part 97 states ALL FORMS OF COMMUNICATION must be attempted. This would mean repeaters, simplex, even packet/satellite/etc (if equipped), and would require trying ALL repeaters and used simplex frequencies (e.g., 6.52 and 6.55) in the area.

If nobody responds there, and you can't find a telephone or another human being, only then should you contact a PS agency -- IF you're a licensed amateur operator.

Believe all you want. You are wrong.

Do you believe HAM Packet is encrypted?

Ryan,

Did you read any of these, before you posted them? They are messages
from THIS thread, and none of them had any proof of the incidents.
(Although I am personally familiar with one, and it does nothing for
your arguement)

I think these people are asking for REAL instances!

I am considering buying an Icom IC-706 or 706mkII. Since my favorite mode is CW I would like to hear comments from anyone on how well this rig performs on cw. How is Icom's optional CW filters in this rig? Good S/N ratio ? I need something more portable to drag back and forth from my cabin and since I am currently lugging seperate rigs for HF, 6 and 2 meters the 706 would better fit my bill. Any comments at all would be welcome please.

Tim-

I cannot give you a fair reveiew on CW, as I do very little CW work. The IC-706 is an excellent rig though for all-around work. The MKII model has anumber of enhancements over the original model, and the current incentives from Icom make it almost a no-brainer as to which model to choose.

Portable, the 706 is very compact, rugged and a good performer on SSB and FM. The menu system does take some getting used to, but it grows on you. I have used mine now for several years, and have just bough tthe matching AT-180 for it. The separation kit is almost a must for mobile use if you are going to actually mount it. I use a Timewave DSP-9+ on SSB and don't miss the filters at all.

I would choose the IC-706 over and over again, but I have to admit I would have waited for the MkII if I had known it was coming.

Go buy one. You'll be hard pressed to find so many features in a small box like this.

AMATEUR RADIO IS MIGHTY
AND
WILL PREVAIL

This issue is dedicated to my favorite South-of-the-Mason-Dixon
gentleman, who keeps the spirit alive. Save your Confederate money...!!
You all know the drill, by now: if it's good, it's MY fault; if it's bad,
it's MY fault; if it's controversial, it's MY intent; if it's funny, it's
MY good fortune [& yours]; if it makes you think, it's Amateur Radio's
gain. HJ4F is published by HJ4F/Psychic Assembly Books. I forget the
ISBN number and the SAN [Standard Address Number] but they don't count,
here. For the electronic newsletter, the important # is: ISSN 1060-9245.
If you stain your copy, don't come [no pun intended] to me; see Bill,
when the bombers get back. Now THAT's what I call STAIN REMOVAL!!! But at
what price, in lives & ordnance, and why can't the highest - even if he
doesn't inhale - US political clown, handle his domestic messes - Hilary
not included - without foreign devastation????????

MEET ME IN St LOUIS, WF3W

While the proposal business runs amok, a very astute and prolific Ham publisher - who does the craft REAL pride - reminded me of a quirk in the system, new or old.
Internet and chat rooms and email aside, how fulfilling is it to have, only, ephemeral friends? No matter what mode you prefer, or switch from/to/among, how do we know when we've made friends [almost as pinning-down when we've made contact]? That's easy in the face-to-face world: you see each other again. You do things together.

But how many Hams consider an RST as 'making a friend'? Or even repetitive &/or protracted ragchews, as committed friendships? CAN you become friends without personal contact? Is there a threshold, in exchange of information, that qualifies as 'friendship'? Can you get to know someone hiding behind, whatever, technology? And would we want to?

Psychologists have studied the alone vs loneliness vs gregariousness trichotomy since Freud lit-up his first cigar [...& sometimes a cigar IS just a cigar]. I think technology is helping to foster a novel, not necessarily healthy, social intercourse - or lack thereof. I think it incumbent upon Hams, in times of crisis and jubilation, to look at what remaining behind a radio might be doing to them. I am NOT attacking the idea of a brother/sisterhood or the communal sense garnered from having an Amateur ticket. This is good. It's the old 'Marine Green' idea: every Marine is PART of something special - as are we - and can look to other Marines for help, consolation, advice, etc. But Marining is a face-to-face - if you've ever had a DI, it's more an IN your face - experience. And it's full-time. When you are in the Corps, you are in it 24 hours per day.

Part of the Amateur Code reminds us there are other facets to life. Exchange of RST is NOT making a new friend, per se. It's a QSO, a log entry, a thing accomplished but not a personality or spirit shared. Ragchewing is a little better. You acknowledge you wish to take SOME time to acquaint yourself with the peculiarities - and we got 'em! - and foibles of the other Ham. A sked, over protracted time, has many of the qualities of friendship, as far as learning about the other person. And, as Natira, leader of the asteroid-world Yonada said, "The joy is in the learning of each other." True enough. But humans were given senses other than hearing and speech - not necessarily connected to brain - for a reason. We were meant to be together, physically. Earliest archeological digs confirm this. Community was the hallmark of the very first Hominids; a physical relationship - no, not just sexual - with respect to territory, living-space, aid, comfort, support and expertise and protection.

Quite frankly, you can NOT get to know someone, completely, in the spirit of friendship, without face-to-face meeting, contact, sharing. There may be a future NPRM that redefines friendship, in electronic/Ham terms, but for now, we will have to stick with the accepted definition. And it's a good one. And it can be VERY good for Amateur Radio. Technology is fun. Talking through a satellite - launched by our 'community' - is something of which we all can be proud. But can we, each, say we participated in

the venture? Didn't most of us just pay dues or use the satellites as a relay station? Oh, we may have read Davidoff's book, understand satellites, orbital mechanics, propagation through an ionized, gaseous envelope, but we were not THERE, to help, to aid, to comfort, to assist, to BE within the milieu of the satellite's birth.

++
++

PAGE 3 HJ4F
AUG 98

OK, ATV, SSTV lets you see the other person, shack, et. al. But it still places us behind a controllable facade that electronics cannot penetrate. This technological shield, behind which we must be, by definition, to do Hamming, is becoming our raison d'etre. It COULD become the reason for our demise. The question of moment is: would we WANT to meet the other Ham? Why bother? We have this technology which makes our globe diminutive; it enable us to reach-out from our own home and sparkle the world with our RF. It brings us closer. It dissolves geo-political barriers. Who could ask for anything more?

We could. In fact, we should demand it. Amateur Radio does all the above. But it is stealing our desire to be with other humans. Experiments with neonatal - newborn - chimps, deprived of contact with their mothers, or others of their own specie - die, within weeks. They are fed, clothed - I know it sounds ridiculous - and provided a healthy environment. Yet they die. BUT, when stuffed models/dolls, resembling a chimpanzee mother, were placed in cages, the chimps thrived. Now, I'm NOT suggesting that Aunt Martha or your mother-in-law should be stuffed and it will serve the same purpose. I AM saying that even the primate closest to us - chimps share 98% IDENTICAL DNA with homo - requires companionship to LIVE. The authors hypothesize the same would happen to human infants [in certain, horrific circumstances, this has proved to be true].

I know you think those club meetings count. But they don't. Most clubs are lucky if 14% of the membership show up at meetings. And the contact that DOES occur, is short, superficial and abbreviated [there are exceptions, of course]. So, if chimps need companionship.... ASSUMING MOST Hams ARE human, it seems we are caught in a catch-22: we have to be behind the boxes to do Hamming but we need to meet face-to-face, to be real friends. There are many instances where Hams HAVE met. Lots of QST, CQ, etc., articles tell of the warm and deep friendships that can arise when US [Yankee, Bill] Hams meet Amateurs from other countries. THAT is putting your travel money where your friendship is.

I have been fortunate to discover wonderful people, over the air, and COMPLETE the process by visiting them. I have made more than 8 such, true, friends along this avenue. More than this, is the survival of our fabulous hobby, itself. If enough of us remain hidden, unseen, unheard, we will be carved-up like a document in Ollie's office. Getting together, to nurture mutual respect, knowledge about each other, seeing how we

express ourselves, feeling emotions reaching out to invite you closer, are all part of becoming friends. True friends have a way of treating each other that has inspired passionate poetry and epic movies. But, more important, it has a way of making us empathetic and sympathetic for, and with, each other. This is an unmovable object or an irresistible force, both of which postures have been necessary in Ham travails.

I URGE you to take pleasure in meeting and learning about other Hams AND other people. Laugh, cry, argue, debate, shout, discuss, be silly, have fun, go places - with other PEOPLE, other Amateurs [yes, Amateurs ARE people, in our, present taxonomy]. If you're close enough to get on the repeater, and you talk with someone you'd like to know, better, DO IT. You'll be a more complete person, a better Ham and give something to our hobby, and yourself, no IC will EVER duplicate.

MEASURING WITHOUT BEING MEASURED FOR A BODY BAG

As Lt. Cmndr. Montgomery Scott would shout at his ensigns, "Man, you have to use the proper tool for the job!" I wonder if Scotty ever got a shock, from a warp nacelle... It's good advice, along with honoring safety standards.

There's an old saying, in medicine, that when YOU have a disease, its incidence is 100%. Accident prevention and safety have been a concern for decades. But in the last 5 years, only, has safety been regulated, regimented and formalized. Learning to use a piece of test gear now includes safe use. And it seems to have arisen at a propitious juncture: though work places are safer, measuring environments have become more hazardous [tripping over the Miller cans...].
Instruments are now failing under conditions, under which they did not fail before. E.g., computers have made us, painfully - in the pocketbook - aware of overvoltage transients, on the mains. So we go measure the mains, and when we do, if we're Extras, the largest transient since the North-East Black-out hits. Distribution systems - power, data, feedback

- and the loads they must convey, are becoming complex enough to be analyzed, only, by computer [which is subject to voltage transients, which we go measure...].

Complexity invites glitches such as voltage transients. In the real world of amps and multipliers and tubes, especially when trouble-shooting, likelihood of aberrations occurring WITHIN test gear, DURING measurement, is very real. Test & measuring gear can no longer be judged apropos, solely on the grounds of voltage rating. You must consider the application and test environment.

IEC-1010 [International Electrotechnical Committee] is a product standard addressing application as well as voltage. Users must be cognizant of how gear will be used and, potentially, misused. Product quality is also at issue. ISO-9000 is the current standard.

We must choose an instrument designed for the application AT THE LEVELS for which that gear was intended. This applications-orientation of standards, can prove safe and least expensive [your HMO not included]. Voltage, under non-stressed, normal conditions, has been the main criterion for safety. For example, your DMM might be safe to 750-1000 volts DC or 450v AC. But the environments, into which you might introduce that DMM, can differ markedly, and dangerously.

++
++

PAGE 5 HJ4F
AUG 98

High voltage transients in a TV would never be experienced in your antenna tuner. IEC-1010 subsumes categories of overvoltage, to indicate levels of protection. Specifically, it calls for greater component spacing - inside the test instrument - to ward-off untoward effects of higher voltage transients. True safety, however, cannot be derived from a chart or standard. YOU must know product safety, your application requirements and how to operate a device safely. If your application includes load switching or significant inductance, you may experience overvoltage transients as high as 20Kv.

Our DMMs are NOT made to withstand this. Testing test gear is usually more benign due to filtering and voltage-limiting circuitry. As obvious as it should seem, most of us do not consider WE are part of the test/measurement circuit. We are, in fact, a circuit component - how'd you like to put Lt. Cmndr. Data into a circuit?
Our safety goal is to ensure NO current flows through the human IC - are we passive or dynamic? Capacitive or Inductive? - which can disrupt normal electro-physiology. Shock - electric - is the most prominent hazard but arcing, inside an instrument, with potentially high flow-through currents, presents a real danger. Don't assume an airline mentality: equipment is expensive, flesh grows back, i.e, it's cheaper to kill people. Again, the main danger manifests while measuring mains or

amplifier circuits. Imagine urself as: 1] a tank circuit [no, not tanked] of 1.5K, skin resistance, 0.22uF 2] a 500 ohm resister, representing subdermal - under the skin - or system resistance [cells => tissues => organs => systems]. If we work on a circuit with, say, a path of 10K, between us and the circuit, current will be:

voltage source
I = ----------
500 (body resistance)

In trauma/emergency medicine, we learn the greatest physiologic insult is ventricular fibrillation [VF], working with frequencies from 50 - 60 Hz. VF is a condition of dysrhythmia - without rhythm - wherein each part of the heart muscle beats independently [cardiac myocytes, muscle cells, are VERY irritable - react easily to - all of electricity's manifestations [current, voltage]. There are 2, specialized sites, that generate a pulse, if you will, of electricity, to which all OTHER heart cells respond, creating a rhythmic, coordinated beat [the beat is the contraction of the left ventricle which forces, oxygenated, blood into the body].

In VF, lack of rhythm results in little or no blood leaving the heart. If a patient in VF were not injury enough, there is, usually, the secondary insult of falling - from a ladder, for example - in an attempt to extract oneself from the source of electrocution. Thermal injury results from holding onto metal objects, heated by large currents, coursing their lengths. When a human bag-of-mostly-water, with some electrolytes thrown-in, comes in contact with any electrical source above 30 V RMS, 42.4 V peak or 60 V DC, where the external source is much dryer than the internal milieu of a living system, there is potential for shock. If ambient conditions are above 32% humidity or within 3.7 degrees of the dew point - the point at which atmospheric moisture condenses, i.e., the ambient atmosphere can be described as 'wet' - the voltage values, supra, can be halved.

++
++

PAGE 6 HJ4F
AUG 98

In case you have never goofed, inside a tube radio, the human body is an excellent conductor, vis a vis current. The amount of current, coursing through your veins or brain - these are particularly inviting moist structures - is dependant upon the voltage contacted and your physiology and electrolyte status. Your body's resistance - impedance, more accurately - to conduction of electrical current DECREASES as voltage INCREASES [I have always thought this is where Dr Frankenstein messed-up]. The circuit/component-model we constructed, above, of the human body, represents resistance values for about 1/2 of Hams [the others are so full of 'solids' and gaseous products, it is impossible to generalize] when voltage contacted is 75. Electro-physiologically,

internal resistance - that under the skin - stays constant. It is skin resistance/impedance that DECREASES as voltage - or frequency - INCREASES. This is why Galvani succeeded, so easily [GSR or Galvanic Skin Response, beloved measurement of ALL psych majors. It is the basis for the polygraph, also].

The threshold floor, for perceiving current, is 0.47 mA. In our body-circuit model, this is a mere 9.76 volts. The maximum value, of current, at which you can, CONSCIOUSLY, detach yourself, from a voltage source, is not well researched but assumed to approach 10 mA, a mere 200 volts across our human body model. 30 V RMS can be lethal. The equipment with which we come in contact - no pun intended - is very different for today's Ham [unless you seek to preserve our heritage]. Power conversion gear - e.g., switching power supplies - can switch large currents in millionths of a second, concomitantly generating large voltage transients, piggy-backed 'on-top' of voltages supplying, intended, loads. For those with towers, especially, we must include lightning.

ALL of us must contend with the local utility - our friend who wants us to save money by having freedom-of-choice (don't be fooled: competition is their direst enemy) - whose power is as free of transients as Bubba is of clean dresses. Consider a transient, causing a voltage spike, which causes an arc INSIDE a handheld instrument: your DMM's terminals connected to your - new, what else? - power supply's innards. Any protection circuitry and/or dielectric spacing, inside the handheld instrument, are shorted. All available short-circuit current flows through the terminal leads and the arc. We can approach currents 600% of full-load PLUS anything getting through fuses, protecting the gear we WERE testing. In short, current of 7,000 amps, or more, can flow for a period of milliseconds. The tips of the test leads super-heat. The handheld probes, themselves, melt away - if not vaporized - drawing an arc FROM the point of contact TO the tips of the probes. Usually, you will see - before your life passes in front of you in DVD or HDTV - a blue-white color; corona discharge or ionized air.
At this point your natural reaction is - well, your shorts are your own business - to pull-away. AS YOU PULL BACK, YOU CREATE TWO ARCS, one for each contact point. If they join-up, as you try to save what's left of your underwear, ONE HUGE ARC FORMS providing a LOW resistance/impedance path, with YOU cast as the 'Wire Man or Woman'. ALL energy in the electrical system-under-test fuels the arc, forming ball lightning - fire ball - that REACHES TEMPERATURES COMMENSURATE WITH THE ARC OF AN ARC-WELDER! Plasmas - corona discharge - are capable of movement through a non-ionized media, viz., the room you're in. It can be hot enough to BURN THROUGH STEEL.

You don't need to be George Clooney, on ER, or Julia Child, to figure you're going to have a closed- casket because you ended-up French-fried. Here's a simple way to become an Elmer: virtually the most common mistake, with handheld DMMs, is taking voltage readings with the test leads in the mA or A ports. If your DMM is UNfused - shame on the manufacturer & you - OR the internal fuse's [current interrupt] rating is

LESS than the available short-circuit current, an arc will propagate throughout the DMM. MANY DMMs are totally inappropriate for high-voltage work, because of low-current rating of the internal fuse &/or internal spacing of components, boards, etc., is too close, due to space limitations inside the instrument. So when it says to READ the manual, completely, BEFORE using... at least read the ratings & limitations - the specs - when you skip everything. You should also have a reasonable idea of what readings will be; into what range might they fall? Especially if you're working on modified gear, ensure you have a working knowledge of the high-voltage circuits, and can use your measuring device with confidence, vis a vis it's being able to handle what you are about to encounter.

++
++

PAGE 7 HJ4F
AUG 98

A COMPLETE list of precautions would go:
1} proper lockout procedures
2} safety glasses
3} standing on insulated matting
4} wearing insulated gloves
5} removing ALL jewelry or other, metal, adornments [especially emeralds]

6} use the HOLD feature: the LAST reading remains on the LCD screen
7} If you must make continuous readings or monitor readings, turn-OFF the equipment under test, connect the test leads, turn-ON the equipment
8} Do NOT hold the [hand-held] meter in your hand. They all come with hangers or stands or rests, so the display is quite in evidence

It wouldn't hurt to know what the right, measuring, instrument IS:
1) know what kind of signal you're going to measure
2) know the MAXIMUM voltage you can encounter
3) be cognizant of the MAXIMUM transient you might experience
4) buy Fluke in lieu of Radio Shlock

If you DMM is rated for 1,000 volts, you can't use it - safely - where you might encounter a transient of 15,000 volts.

GOODBYE TO A MORE MODERN PIONEER

Andrew Franklin Inglis, 78, a high-ranking RCA Exec, died 29 July.

Working for RCA, over 30 years, his last post, in the early 80s, was president of RCA American Communications, Princeton, NJ. Inglis was the guiding intellect on installation of a novel system of radio transmission, adopted by ABC, NBC & CBS. Producing major improvements in sound fidelity, the system was one of the first commercial uses of digital audio: Tony Bennett & Mel Torm broken-down into discrete 1s and 0s.

Computers were just beginning to become integral in phonograph record, TV and radio production. RCA American Comm. also operated RCA satellites. After birds were established in orbit, RCA Sats. sold rights to satellite use. Inglis developed and ran the satellite venture.

During the war, he worked at the Naval Research Center, in DC. After WWII, Inglis became, virtually, the first 'sales engineer'. Under Inglis, RCA divisions pioneered direct-from-satellite TV and RCA mobile radio. He began his RCA career as an engineer, in closed-circuit TV, in Camden, NJ. Inglis was the author of BEHIND THE TUBE: A HISTORY OF BROADCASTING TECHNOLOGY, SATELLITE TECHNOLOGY AND VIDEO ENGINEERING.

He was a prolific writer of technical articles, broaching development of satellite and broadcast technology. He served as editor-in-chief of the Electronics Communications Handbook.

3023. Re: Marine SSB Rig OK on Ham Bands?

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-02 00:00:00 UTC
From: "Robinson, AB5VH" <rmcrusoe@gte.net>
Message-ID: <6siili$a3o$1@news-1.news.gte.net>
Source record: 162896

Of course you can use the rig on the ham bands. As long as a licensed amateur is operating, and you are on amateur frequencies. The marine HF rig most probably meets all amateur emission standards. As an amateur operator you will be regulated by amateur rules.

If the vessel were required to have a marine HF radiotelegraph or radiotelephone station, certain other regulations would have to be considered also, and are clearly stated in part 80. A private yacht or any other uninspected, voluntarily equipped vessel can use the same rig for Marine and Amateur work, the same power supply, the same antenna and matching equipment, the same peripherals, etc.

You may find that operating on Amateur frequencies is not straight-forward, though. There may be no provision for CW, or it may require a separate module. The rig may be set up to use the estabished ITU channels, and you may have to individually program additional channels for ham use. Check the manual. Remember to make sure you are operating simplex. Simply spinning a dial might only be changing the receive frequency.

You are correct that you cannot transmit on marine frequencies when the vessel is not actually afloat. Get a copy of part 80 for the dull dry boring stuff. Find a copy of the General Radiotelephone exam question pool as well. Think of it as a FAQ with a bit of dead weight thrown in. It will answer a lot of your questions regarding marine HF installations and their use.

Hope this helps.

When you calculate UTC from your local time, you *DO* have to take
into account DST. For example, on the West Coast UTC = PST + 8 during
winter, while for summer, UTC = PDT + 7.

Here in Hawaii, we were placed on DST during WWII ("War Time"). After
the war ended the authorities failed to reset the clocks. We've been
on DST ever since.

> Communications.

Well, I'm not a lawyer *either*, but as a lawyer explained to me, if that
were true they'd have said "this Subpart" or "this section" instead of
"these rules". "These rules" is ambiguous, but though it might seem that
it could be stretched to mean the whole of 47 CFR (FCC regs), just about
any court would hold the narrowest logical interpretation, i.e. Part 97.

> It does NOT allow operation outside amateur bands, and
> it requires that normal communications be out of service due to natural
> disaster before "Out of class" operating priveledges apply.

It doesn't prohibit operation outside amateur bands, and it does say that
Part 97 doesn't prohibit same under conditions of emergency. It says
absolutely nothing about "natural disaster" or "operating privileges".

> Note that
> we're not talking about the original Communications Act of 1933 - that
> has long since been superceded by 47CFR, which is itself regularly
> updated and modified.

Nope again. We aren't talking about the Communications Act, true, but
that Act was not superseded by 47 CFR at all and could not be superseded
by anything in the Code of Federal Regulations (which basically consists
of "operating manuals" for Congressionally-created government agencies,
and rules by and for those agencies).

I believe it was the Act of 1934, but I'll chalk that up to key proximity.

> Separate rules, NOT part of Part 97, apply to operating on the public
> safety frequencies in question and the issue of type acceptance. They
> ALL are binding!

I said that. :-)

The SGC-2000 is advertised in Ham magazines. It is type accepted
for marine operations. That is the easiest way to make the point.
And, yes, the ICOM marine radio can be used on the Ham bands.
It meets higher standards.

Did you ever stop to consider that it takes much less effort to get along with everybody than it does to cause dissention? (dissention means angst, anger, etc.)
Have you ever attempted to befriend anybody? Have you ever thought that you could possibly make friends with folks if you would simply stop being so confrontational?
If you were to stop calling others "on the carpet" and admit to your own demons we could all let this pass and move on. Call it a draw if you will, but let it drop! As long as you continue to flaunt the failures of other Hams, they will continue to flaunt yours. Do you not see that this is a never ending cycle?
Get over it, Jimmy. Let it pass. Leave the skeletons in the closets alone...it does NOT make you a better person by pointing out the faults of others....especially since you have so many of your own.
You could be a better person than what you are...you have the intellect to do better. The choice is yours......

It's ok. I have used one at a field day that had a cw filter. It was pretty tight. But I wasn't overly impressed with the overall audio quality of the rig. Seems to maybe have a tad to much rf gain on the low bands. But I imagine this is due to catering to the mobile ops. It wasn't distorted or anything just kinda flat sounding. But heck, what can you expect from such a small radio, and also I'm spoiled on my 830 and other rigs. Good sensitivity on the high bands. Overall I'd say it's ok. Reliable with a decent track record. And small. I use a old IC 730 in my car, and has been a very reliable radio over the years. MK

It's OK. I have worked a few of them. Thought it sounds kinda of mushy above 35 wpm when in QSK mode. Like it's chopping some of the dashes or something. Don't know how well it RX's. Can only tell you what it sounds like over the air since I don't have one.

I can say, the faster you send, the better your signal must sound due to static and QRM. It's takes too much effort to guess what your trying to say... Best CW still comes from older rigs with a manual PTCW switch.

3035. SATELLITE SOFTWARE - HOW IT CAN HELP YOU!

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-02 00:00:00 UTC
From: emanuel.marques@NOSPAMmail.telepac.pt
Message-ID: <35ed2d06.6523483@news.telepac.pt>
Source record: 162908
Cross-posted to: rec.video.satellite.misc,rec.radio.amateur.space,rec.radio.amateur.misc,rec.radio.amateur.equipment

Many people don't know that the right software program can be of great help, even for the non professional dish installer (DIY). Others are reluctant to use satellite software because they think it's too complicated to use or even useless.

This is not a FAQ about satellite software, but an attempt on my part to try to better inform potential users about the benefices of using satellite software.

I. WHAT IS SATELLITE SOFTWARE?

II. ABOUT SKYSOFT SOFTWARE.

III. IS IT USEFUL FOR ME?
A) I AM A PROFESSIONAL DISH INSTALLER.
B) I AM NOT A PROFESSIONAL.

IV. SKYSOFT SOFTWARE AND OTHERS

I. WHAT IS SATELLITE SOFTWARE?

There are several types of "satellite television software". Some are dedicated to help professionals and DIY dish installers to setup satellite systems. Others are meant to emulate viewing cards used by encrypted channels. Another more recent type of software is meant to replace the original software of some satellite receivers in order to add new features.

II. ABOUT SKYSOFT SOFTWARE.
Skysoft is the name of my project dedicated to satellite software tools. I am only interested and dedicated to developing engineering software (dish aiming , downlink budget, etc.).
Currently I have three software programs available; EASYSAT, PCSAT, and ARQSAT.

You can find more information about Skysoft and the software at:
http://www.sat-net.com/skysoft/

III. IS IT USEFUL FOR ME?
A) I AM A PROFESSIONAL DISH INSTALLER.
The true professional plans receptions systems. It is hard to imagine someone doing all the required calculations one by one. Nor is it acceptable to use the trial an error method or go by the word of mouth to determine minimum dish size, for example.
A good software program can save you time and money!

B) I AM NOT A PROFESSIONAL.
If you are planning to buy a satellite system EASYSAT (just 25 USD!) can be a great help:
- Find what satellites you will be able to aim to.
- Find what satellites/channels you will be able to receive.
- Find the optimum dish size for your location and for the channels you want to receive.
- Help you better understand how satellite television reception works, and how individual components and parameters affect system performance.

If you already have a satellite dish system:
- Help you diagnose reception problems (satellite signal is too weak, dish is to small, deficient dish aiming, etc.)
- Help you decide on equipment upgrades (how much bigger the dish should be, will a lower noise Lnb "do it", etc.)
- Help you better understand how satellite television reception works, and how individual components and parameters affect system performance.

IV. SKYSOFT SOFTWARE AND OTHER SOFTWARE PROGRAMS.
There are other software programs that perform similar tasks, in what ways are EASYSAT and PCSAT different?

Being a long time user of satellite software myself, I have found that available satellite software falls into two categories:

1) Programs with many functions, but unfriendly and too technical for most users.

2) Programs easy to use, but with few features, "over simplified", and easily outdated. These are usually free programs sponsored by satellite equipment manufacturers and therefor are designed to work with only a particular brand of equipment (dishes).

Having practical knowledge of satellite systems design and installation. I have been integrating really useful functions and features to my software programs. Some of them are exclusive of my software, which makes them arguably the most user friendly and useful software for the typical professional and DIY installer.

For more details, please go to the Skysoft Web Site at http://www.sat-net.com/skysoft/

Thanks for reading this posting...I just bought a new FT-10R hand-held & I am have trouble in receiving anything outside of the ham band. In the specs, Yaesu claims that the rig will receive from 140Mhz to 174Mhz yet after getting home & reading the instruction book that comes with the rig it states 144-148 Mhz. coverage. I have tried to reset the upper & lower settings to expand the coverage by attemping to reset the lower to 140Mhz & the upper to 174Mhz. but NO LUCK. I have called the dealer but they can't help me...these rigs are very hard to program. I should have gotten the program & cables to do the programing on the computer & then down loaded it to the radio. Does anyone have a FT-10R which they have gotten it to cover these portions of the band. I wanted to use this rig to listen to the WX Freqs. & also have 2 meters for communications when we go camping or hiking. My wife & two daughters are also hams.
Thanks for any & all info!!

>responsive to my challenge.

I sure wish you would provide a verbatum transcription of our QSO. If I had been "unresponsive" then why did you hang in on the QSO? To me it was just a regular chat. Contrary to popular opinion I do not get on the air that much so don't have that many on-the-air chats nowadays. I'd filled a stack of logbooks up until about '93 and never had to "respond" so someone's wishes to debate unless they came out and said so. If you want someone to debate you on the air, why beat around the bush? Say something. In that respect, you were pretty passive during the QSO and your first posting afterward stated that "Someone finally had guts to meet you on the air." Then in later postings you began to say how I would not debate you. That is when I saw what appeared to be your true colors and is when the harrassing began. And the newsgroups is where perpetual threads belong, correct?

>I did but I cannot talk when you were non responsive.

That's funny. For someone whom you claimed was non responsive, you hung around a little while and chatted and even asked me to QSY to 75m which I did and we chatted there. I think you have a different dictionary than the rest of us and have a gross misconception of what "responsive" means.

> Why are you so

>What do you think about it?
>
>Hawke

The problem with SSB use at VHF in an aircraft is that the frequency tolerance of the channel selector must be very very good or all you get is Donald Duck. Remember that pilots generally aren't trained radio operators, and that they usually have their hands full flying an airplane. Asking them to pay attention and carefully tune in SSB signals is probably asking too much. Plus, they might miss the meaning of a short transmission because they couldn't get it tuned in before it was over. (HF SSB aircraft use is a bit different in that the contacts usually aren't so time and safety critical, so a bit of fussing with the tuning is acceptable, and stability requirements are less at HF too, so less fussing is required.)

The problem is that all the SSB radios would need to be on the same frequency to within about 1 part per million in order to assure that they could be understood without some sort of manual tuning. That's about 10 times closer frequency tolerance than good VHF equipment has. AM and FM are much more tolerant of mistuning. They can work with a 100 parts per million tolerance on VHF. But FM has capture effect, which could mask a weaker Mayday call, so we're left with AM.

One possible solution is to adopt ACSSB. That uses a pilot tone which can be used with AFC in the receiver to solve the tuning problem. But ACSSB didn't catch on, and there's a pseudo-capture problem with it too in that the signal with the stronger pilot tone will capture the AFC.

Another advantage of AM over SSB is that it *does* have a constant carrier. That makes it easy to DF, and ATCs have automatic DFing equipment for that purpose. That wouldn't work with SSB.

Realize too that the entire aircraft fleet, and all ground stations, would have to convert over to any new modulation technique *simultaneously* to preserve interoperability. So any new method has to have an overwhelming advantage before it would be worthwhile to make that massive effort. So far, the authorities have judged ordinary VHF AM to be "good enough",

and have resisted the idea of changing over to another method.

This is not strictly a ham question, but its sort of in the area
of RFI, so I thought I'd ask here...

I have an 19in Sony TV that is fed by cable through a VCR tuner.
One local VHF television station has a very strong signal at
my QTH so I get severe ghosting on that station which I believe
is due to the mixing of the cable signal with the broadcast
signal. I do not have rabbit ears installed on the set; is
there any way to filter out this signal? Yes I can get a clean
picture by just using the broadcast signal, but its a hassle.

The C510a is a superb dual band HT with wide band RX. The CPB510a is a 50w power booster with extra filtering for enhanced in-band intermod rejection. When used together, the power booster provides power to the HT along with external connections for an antenna and speaker. The power booster also has a cable that connects easily to the HT. It's basically like a mobile rig with a full function mic!

I acquired the rig at the last Dayton Hamvention. The HT (with case) is in perfect condition and the power booster has never been powered up or even unpacked (I just haven't had the time to get to it).

Asking price for all three pieces is $595 (I paid over $750 last May).

Please feel free to contact me at bfranki@frontiernet.net.

There is no definition of "amateur station" in Part 97. (at least in my copy dated March 19, 1996)

You also won't find mention of SWR meters, microphones, tables, chairs, CW keys, power supplies, etc. in Part 97. Is it your contention that these are not permitted to be at the disposal of an amateur station?

My copy (10/01/97 edition, Subpart A - General Provisions- Part 97.3
"Definitions, " Section 5 says:

Amateur station. A station in an amateur radio service consisting of the
apparatus necessary for carrying on radiocommunications.

>You also won't find mention of SWR meters, microphones, tables, chairs,
>CW keys, power supplies, etc. in Part 97. Is it your contention that
>these are not permitted to be at the disposal of an amateur station?

Those items would probably come under the "apparatus" part of the above
section.
I don't know for sure, but that's how I would interpret it.

3059. Re: Marine SSB Rig OK on Ham Bands?

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-02 00:00:00 UTC
From: windbrkr@erols.com
Message-ID: <MPG.1057b5d51342c4d49896d1@news.erols.com>
Source record: 162932

Thanks to the folks that responded here and by email to my question concerning the use of a marine rig on the ham bands where it is capable of transmitting.

I got my hands on the instruction manual for the rig today, an Icom IC-M710 HF Marine Transceiver. It has receive coverage from 500 KHz to 30 MHz, and transmit coverage basically on the marine bands. One of these fully overlays the 17 meter WARC ham band. So given that I can get my antenna to tune on that band, I should be able to check the rig out on the air. It has SSB, CW and FSK capabilities.

If nothing else, it will be interesting to compare the "look & feel" and general quality of an Icom marine rig with the other Icom ham products of which I am the proud owner. ;-)

We've "inherited" a Telrex BIG BERTHA tower which creaks while rotating.

Was the tower supposed to run dry or were the bearing surfaces supposed to be oiled/greased? I note on our blueprints the 1/2" drain pipe which runs to base of the tube. Was this to drain or oil the tower?

Does anyone have any additional info / materials regarding these beasts?

Thanks

SB QST ARL ARLB066
ARLB066 Gulf Coast hams bracing for Hurricane Earl

Upgraded from a tropical storm September 2, Hurricane Earl has changed direction, prompting hurricane warnings along the Gulf Coast from Mississippi to Florida. Hurricane or tropical storm warnings extend on either side to New Orleans and to the Florida Keys.

Northern Florida District Emergency Coordinator Nils Millergren, WA4NDA, reports Bay County, Florida, already has opened two shelters for possible evacuees. The shelters, the Bay County Sheriff's Office, and Bay Medical were said to be using Amateur Radio Support. The telephone system is ''clogged.'' Wind and rain had reportedly picked up in the Florida Panhandle this morning. Schools in the Florida Panhandle and in Alabama coastal areas closed early.

Weather forecasters say the storm surge near the storm's center could be 5 to 7 feet above normal tides, and 10 inches of rain is possible.

Before the storm changed course, voluntary evacuations already had begun along the Louisiana coast.

SB QST @ ARL $ARLB065
ARLB065 FCC issues errata on streamlining NPRM

ZCZC AG65
QST de W1AW
ARRL Bulletin 65 ARLB065
From ARRL Headquarters
Newington CT September 2, 1998
To all radio amateurs

SB QST ARL ARLB065
ARLB065 FCC issues errata on streamlining NPRM

The FCC has issued some corrections and clarifications to its recent Amateur Radio rules ''streamlining'' proposal, WT Docket 98-143. The 13-page Errata document addresses most of the questions and confusion raised by the original NPRM, released in early August.

The FCC said the corrections were issued ''to conform the proposed rules to the proposals discussed in the text of the Notice.'' The FCC noted that in some instances the NPRM included sections of rules they did not propose to change. These have been deleted, and only sections of the rules where changes have been proposed remain.

A major change from the original rulemaking proposal was to effectively reinstate the language in Section 97.505(a)(10)--the provisions for a physician's certification that an applicant is unable to pass a 13 or 20 WPM telegraphy examination. In the NPRM text, the FCC invited comment on this issue and on an earlier ARRL proposal, RM-9196. The ARRL had asked the FCC to require anyone applying for an exemption pursuant to a doctor's certification to first attempt the higher-speed test before getting exam credit.

The Errata also clarify the Commission's intention to retain the current 365-day time limit for a Certificate of Successful Completion of Examination (CSCE) to remain valid.

The FCC also has added the words ''Element 1(A), 1(B) or 1(C)'' to Section 97.301(e), referring to the 5, 13, and 20 WPM code examination elements, respectively. While this clarifies the need to at least have credit for the 5 WPM Morse code examination to gain Novice/Tech Plus HF privileges, neither the original NPRM nor the Errata list Element 1(A)--the 5 WPM code test--as a specific requirement for any license class. The FCC appears to be proposing to provide that a Technician licensee could gain HF privileges by

passing a 5 WPM code test, but how this would actually be done in practice remains unclear. The FCC describes elsewhere in its proposed rules how applicants may claim credit for Element 1(A), however. A proposed change at Section 97.507(d) that would have substituted the words ''no less than 5 WPM'' has been dropped. The current wording says ''no less than the prescribed speed.''

The FCC also addressed apparently inadvertent rules changes in the NPRM to Section 97.305. Under the Errata, no changes are proposed. Language in the NPRM would have eliminated Extra class phone and image privileges in the 20 and 15-meter Extra class phone subbands and data privileges in the 20 and 15-meter Extra class CW subbands. In addition, the NPRM would have dropped data privileges from Novices and phone privileges for current Tech Plus operators on 10 meters. The FCC also eliminated all proposed changes to Section 97.307, including wording that seemingly would have limited Novice CW operation to ''only messages sent by hand.''

The FCC's Errata also indicate that the Commission intended to retain the current 200 W PEP power limit on the current Novice/Tech Plus HF bands (and on the 30 meter band and on 7.050-7.075 MHz within Region 1 or 3) in Section 97.313. The NPRM had proposed imposing the 200 W PEP power restriction on HF only when the control operator is a Novice.

The FCC also made it clear that someone holding a Technician class license granted before February 14, 1991, could get examination credit for written Element 3(A). The Errata also add Element 1(B), the 13 WPM code test, to the elements that may be prepared by an Advanced class Volunteer Examiner.

The Errata also correct several apparent typographical errors and make other relatively minor changes to the original NPRM.

The Errata fail to address another discrepancy in the NPRM that was raised by the ARRL. The NPRM gives an applicant who held a Technician license (expired or otherwise) granted before March 21, 1987, examination credit for written Element 3(B). But the proposed rules do not extend similar credit to an applicant who had held a General or higher class license, once the grace period is past.

Well I've got an Icom IC-706MKII in my '86 Chevy S-10 pickup.
It's mounted in the space below the AMFM/cassette player.
Don't run mobile CW with it as I only use it for SSB & sometimes FM.

It also makes a great SWL reciever

Antenna is a Bugcatcher. Don't use any kind of antenna tuner.

Each part which deals with a specific radio service begins with
definitions. For the ARS, the definitions are found in S97.3.
You're supposed to know Part 97 forward and back, Mickey.

>You also won't find mention of SWR meters, microphones, tables, chairs,
>CW keys, power supplies, etc. in Part 97. Is it your contention that
>these are not permitted to be at the disposal of an amateur station?

You'd be a miracle-worker if you were able to transmit with a table.
This discussion is in regard to legal definitions; if folks are
going to quote from Title 47 they need to know the FCC's definition
of each and every term that appears in what they're quoting.

Message-ID: <35EE13B1.8F230DBF@fox.nstn.ca>
Source record: 162796

I am a graduate student studying the early years of World War II. In connection with this work, I have come across specs for a wireless station as follows:

Wireless apparatus: powered by one 50 kilowatt diesel Astor triphase unit producing 2200 volts, alternating current, reduced to 220 and 120 volts in 50 cycles. Unit is also supported by twin diesel Astor motor units supporting direct current for some of the apparatus.

The apparatus can be operated:

- As a marine radio, on 600, 620, 640, 660, 680, 850 and 900 meters, with a power of 500 to 2,000 watts.

- As a radio broadcasting station, on 492 meters with a power of 250 watts.

- For international radio communication on 16800, 11200, 8400 and 5600 kilocycles with a power of 500 watts.

Can anyone tell me, assuming that this apparatus was on the coastline ... how far out to sea would the unit be able to communicate ... as a marine radio and as a broadcasting station?

Any observations would be appreciated ... this unit was in operation in 1941. What difference would it have made for international communication

if the station had been able to broadcast at 11200 and 6400 kilocycles at a power of 5,000 watts?

Thanks in advance for any help.

Surprised you don't also have 10 meters.

Check and see if you can program new frequency pairs. Most marine SSB rigs
can do this. Then simply program a few freq pairs, using the same freq for
both TX and RX. There isusually a work-around of some kind. You might also
ask te dealer who sold it, or the mfgr how to go about defeating the channel
masks.

How many of us are ARRL members? If the truth be known, the ARRL members are in a minority and their membership is falling. Where therefore has the ARRL been given the right to propose rule changes to the very basics of Ham Radio operations? I can understand the radio manufacturers wanting to usher or "grandfather" in more Ham operators....this will result in increased sales for their already over priced radios.
I have to wonder about the agenda of the ARRL....do they wish to increase sales of their already lagging magazine and increase membership in their myopic cause? If the ARRL gets their way, they could well soon be publishing a magazine called "Ten-Four Good Buddy". Perhaps QST could get a jump on this and begin advertising Astatic "Echo Master" mics along with an approved list of the latest "ten" codes.
If this comes to pass, we will soon be hearing phrases such as "I heard that, I did." and "Rogo" on the HF bands.This is a sad reality and it is currently rampant on the 2 meter FM freqs. Give a CB'er a Ham ticket and he will still be a CB'er. Perhaps the ARRL could offer special sales incentives in QST for echo boxes and other idiotic noise making devices for their new members.
Meanwhile the malicious interference will increase on all the bands with nary a whimper from the ARRL or the FCC.
Sorry, guys......I just cannot "buy" your latest proposals. They just do not hold water. When one no longer has to "earn" a Ham license, when a license is handed to him/her this hobby will slide even faster down the slippery slope it has begun.

Source record: 162804

For sale: That hard-to-find power plug for Yaesu VX-1R radios.

Price, including first class postage to 50 states and Canada:
1 connector for $3.00
2 connectors for $5.00
3 connectors for $6.50
(add $1.50 for each additional connector)

We also have 7806 regulators for an additional $0.50 each when
you get one or more connectors.

Add wire and a couple bypass caps and you can have a 12-volt
adapter for under 5 bucks. Compare that to the $38+ that Yaesu
wants for their's. (At the Rochester hamfest it was "only" $35.00.)

Send a note saying how many you want along with a check or M.O.

This dislusional thesis has been trotted out so many times it has become boring. Most of these jammers give their callsign from time to time. Several folks with the equiipment and the smarts have fingerprinted the tranmitter startup and voice printed the operators. The guys doing this are HF licensed, mostly above general. Just look at the NALs for the past few years--license class with the most NALs EXTRA wooops.

You can trot that "Codeless Tech" dog out if you want but it ain't gonna hunt. BTW I notice a lack of callsign on your posts what class operator are you? I recognize you don't need a callsign to post on the internet, despite what you procodetest folks try to tell Len, but I just wondered.

I recognize that it is part of the procodetest mantra that code is a filter but like many cult beliefs it can't stand the light of truth.

Pray flame away don't let those pesky facts bother you after all; You said it, You believe it, and That settles it.

Hey folks,

I live in Finland, where the power is 240VDC at 50Hz and I have a really nice American 1500W step down transformer, 240->120VAC. Unfortunately, it was designed to be used in the US at 60Hz, as a house transformer, and it gets too hot at 50Hz (I figure the wires are not a large enough gauge, or the core is not optimal, for use at the lower frequency).

How difficult would it be to build a device which converted 50Hz 240VAC to 60Hz 240VAC, for frequency matched input to the step down transformer?

Such large transformers are very expensive here and I'd love to be able to put the one I have to good use cheaply and safely...

Cheers,

Patrick

If you are going to go the trouble of converting 50 Hz to 60 Hz why not just convert from 240 v to 120 v (which is what the transformer does anyway). I think that the circuit would be quite complex and that you would loose a lot of efficiency in the conversion. Let me think. You could convert 240Vac directly to DC if you wanted. Then run it into a Dc to AC inverter, which would require a 60 Hz transformer anyway (which I suppose could be the one you have). [No, I do not have a schematic.]

Does your transformer get hot with no load? If so, it is probably the core. If not, just derate it, perhaps to 1000W (or what ever).

I have read about this problem, but never actually seen it. I guess you can go one direction (50 Hz transformers on 60 Hz) but not the other, as you have discovered.

If we have that level of data and expert witnesses, why hasn't it
been presended to the FCC? If they will not do anything then
hand it to your congressmen (in writing). Also present it to the
US Attorney's office even if they have to go back to the FCC.

> Adios Jerry
>

It has been long evident that much of our problems are coming
from the higher class hams who feel they own amateur radio.
If the Federal government would go after the jammers, the neo
nazis, the bad language guys like they do drug users we would
see much less problems.

3091. ARRL VEC PROBLEM 1 (repost)

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-03 00:00:00 UTC
From: zeus98@my-dejanews.com
Message-ID: <6smnlm$2ur$1@nnrp1.dejanews.com>
Source record: 162818

I was getting emails from those who saw the following posts but still
Didnt read the post that started it all..
Enjoy

SOMETHING SMELLS IN WEST PALM BEACH A very puzzling story is emerging from the West Palm Beach area of Florida in which irregularities are alleged to have occurred at a February ARRL Amateur Radio License test session. The controversy centers around an individual who suffers a degree of mental disability, who through the efforts and dedication of good friends and mentors, was able to acquire his Technician license and 5 wpm code. The nature of this gentlemen's disability is similar to attention deficit disorder however his ability to learn and retain information, albeit difficult and time consuming is satisfactory, but his ability to "process" information quickly is severely hampered and higher speed code ability is beyond reasonable expectation. This fact has been attested to and certified by the appropriate medical authorities under all the regulations set forth by the FCC. The man has gone on to get his extra-class license without the code certification. This person we are speaking of is Andre Lavigna W3UH, according to sources close to this situation W3UH is always eager to participate in activities and willing to lend assistance for just about anything no matter how trivial or menial. Some people find dealing with W3UH intolerable while others view his situation in a positive light.

One of his closes friends Joe W8WW, one might call him a protector, elected to become a VE and naturally Mr. Lavigna wanted to do the same. Both of the men studied the material and became certified VEs by the ARRL. It is customary for newly certified VEs to observe during test sessions and essentially receive on the job training. They are encouraged to ask questions and receive counseling to prepare them fully for the responsibilities of a VE.

At the February 21st test session that has been called into question, Manny Papandreas W4SS assumed the reins of head VE. Mr. Lavigna W3UH, Joe Keller W8WW and another new VE showed up at the session to become familiar with the procedure of that particular site. Mr. Lavigna friend Joe Keller, who I noted had also recently been certified, did not have his "official" badge, which had mistakenly been sent to his address up north. He had, however, an e-mail certification from ARRL HQ attesting to the fact that he was indeed a certified VE. When presented with the e-mail affirmation, the head VE would not accept it implying that "anyone could have written it" Mr. Keller was not allowed to test. The ARRL manual states that e-mail accreditation is quite common and is perfectly acceptable. Earlier that week Mr. Nichapor W2QX requested an e-mail authenticity letter be sent to Mr. Keller W8WW confirming that he is a legitimate ARRL VE. Mr. Nichapor confirmed to the head VE at the test session that the e-mail letter was authentic and within the

guideline of the ARRL regulations.

Mr. Levigna W3UH was placed in the number one spot by Manny Papandreas W4SS and announced to everyone in the room that nobody was to provide any help to Mr. Lavigna W3UH. The action of placing W3UH in the number one chair is highly irregular since the responsibilities of the position demand someone with experience and certainly Mr. Lavigna W3UH, in his first ever test session, had none. To add insult to injury, others in attendance were instructed not to assist W3UH Mr. Andre Lavigna. In the course of the test session, another newly certified VE Joanne Schoefein AF4GX was afforded an abundance of assistance and advice. At one point, Andre requested a pencil and the request was denied. "ONE WOULD ASSUME AND MANY OF THOSE IN ATTENDANCE AGREED, THAT THERE WAS A CONCERTED EFFORT TO DISCREDIT ANDRE BY INSULATING HIM FROM THE CUSTOMARY GUIDANCE AND ASSISTANCE", (as well as seating him in the number 1 chair for his first ever test session), allowing him to make error and then be found unqualified to be a VE. Several individuals have stated that Manny W4SS had made a statement previous to the test session that Andre W3UH would become a VE "Over his Dead Body". And W4SS, Manny actions at the February 21st test session appeared to be a flagrant effort by him to sabotage the efforts of AndreW3UH to become a VE. These actions are not within the guidelines of ARRL VE Handbook.

Andres friend Joe Keller W8WW and Harold Felton W4UJ were denied participation in the VE team, (COULD IT BE THAT IF W8WW AND W4UJ WERE ALLOWED TO PARTICIPATE IN THE TEST SESSION THEY WOULD HAVE HELPED ANDRE IN VIOLATION OF MR. PAPANDREAS W4SS ORDERS?).

Mr. Lavigna W3UH attended another test session on April 18, 1998 and was subjected to verbal abuse by Walter Peace WD4IUD. His words to Andrea were something in the order of YOU'RE A PIECE OF SHIT, I DON'T EVER WANT TO TALK WITH YOU AGAIN, YOU'RE A LIAR YOUR JUST SHIT. This incident was witnessed by W2QX Steve Nichapor, W4UJ Harold Felton, and many of the people being tested. It was loud, embarrassing and humiliating and also depressing to Mr. Lavigna. These words still trouble Andre today and he has a difficult time wanting to

participate in Amateur Radio activities. It is certainly a disgrace to have negated Andrea's desire and willingness to be one of the boys. These words would be difficult for the average person to accept and should never have been used against a handicapped person. It would appear that there was a clear-cut effort to deny Mr. Lavigna W3UH his right to become familiar with the testing procedures through OJT. Did Manny Papandreas W4SS, discriminate against Mr. Lavigna by denying him assistance while allowing it for others? The fact that Mr. Lavigna is mentally challenged makes the allegation even more serious while at the same time sparking contentious debate about ARRL policies concerning disabilities.

Maybe the ARRL (who are charged with the duty of monitoring the VE test teams) should take appropriate action and should suspend the accreditation of Manny Papandreas W4SS, and Walter Peace WD4IUD.

WOULD YOU LIKE TO SEE ANY OF YOU'RE FAMILY MEMBERS OR YOUR FELLOW AMATEUR BEING TREATED IN THE SHAMEFUL AND EMBARRASSING MANNER? THIS IS A TRUE

EMBARRASSMENT TO AMATEUR RADIO.

I ask that you write your ARRL director, your ARRL Executive Vice President K1ZZ Dave Sumner at League Headquarters, your Senator and your Congressmen and let them know your true feelings.

ONE CAN REALIZE THAT THE ACTIONS OF W4SS AND WD4IUD WERE A MISUSE OF POWER AND A DISPICABLE ACT. PLEASE TAKE A MINUTE TO EITHER WRITE OR EMAIL YOUR FEELINGS TO, WD4IUD AND W4SS. THEIR ADDRESSES CAN BE FOUND IN QRZ. WD4IUD CAN BE EMAILED AT wd4iud@magg.net

WHATEVER IT IS THAT'S GOING ON IN WEST PALM BEACH SURE DOES SMELL FUNNY!

The originator of this letter holds an ARRL position and does not want to jeopardize it. It has been brought to my attention that many people have called league headquarters with questions, only to have their questions fall on deaf ears. I ask all of you who read this to Call Mr. Bart Jahnke, at 1-800-927-7583 and ask why they have not taken action in this matter. Please do not let Mr. Jahnke brush you off with were looking into this, or this is not are area of responsibility. If you do not get a satisfactory response from Mr. Jahnke then direct your Questions to Rodney Stafford at League Headquarters.

THANKS FOR TAKING THE TIME TO READ THIS.

ANNOUNCING THE
"MANNY SCHOOL OF HOW TO TELL LIES"

Yes starting soon in Palm Beach County will be this unique and informational school of HOW TO TELL LIES.

You will learn WHITE LIES, THE ART OF FIBBING, BULLSHIT LIES, AND HOW TO LIE AND BELIEVE IT YOURSELF.

These techniques have been show to be proven by many politicians BILL CLINTON, TED KENNEDY, SADDAM HUSSEIN and many other world leaders.
You will be given first hand instructions from Palm Beach's finest liar.

We already have people signed up and the seating is limited.

We have Walter wanting to learn on how to lie about the distribution of County equipment.

Manalapan Dick wants a refresher course on how to lie about taking payola and how to certify improper building records. He also will be given instructions on how to lie about getting an upgraded license.

Graf wants to know how to worm his way out of the improper ARRL VE test sessions.

Manny will also teach you on the art of telling lies to your boss, the ARRL, your girlfriend, your boyfriend, your co-workers, and anyone else who will believe your lies. A special course will tell you how to lie at Sunday morning breakfast, right before going to church. Manny has all bases covered so you won't want to miss this educational opportunity.

It's easy to sign up, just get on the 147.360 traffic net at 7pm and tell Manny that "YOU ARE READY TO LEARN FROM THE PRO" or call the Palm Beach County EOC. He is generally there, that is if he has not lied to his boss about his whereabouts.

I assume that you mean it gets hot with no load. The problem is that
the primary reactance is too low for use at 50 Hz. If you could increase
the primary turns by about 12%, it ought to run cool. But you'd need to
increase the secondary turns too in order to still get the same voltage.
There probably isn't room on the core to do that.

>How difficult would it be to build a device which converted 50Hz
>240VAC to 60Hz 240VAC, for frequency matched input to the step down
>transformer?

Well, you don't have to convert it to 60 Hz exactly. Anything 60 Hz or
greater will do. So all you need is a chopper circuit in the primary which
operates at any convenient rate. A pair of SCRs driven by a free running
multivibrator (555 chip) would suffice, but would generate some nasty
hash. Lots of shielding and bypassing are required. That's easier at higher
frequencies, so chop at a 1 kHz or higher rate. Then the lowpass filter you
need on the output of the transformer won't need to have such a sharp cutoff
to get rid of the switching hash.

Of course if your *loads* need 60 Hz (motors, clocks, etc) then this won't
work. You'll need sinewave 60 Hz in that case, and that's much more work
than the transformer is probably worth.

>Such large transformers are very expensive here and I'd love to
>be able to put the one I have to good use cheaply and safely...

It may be worth your while to consider rewinding it, even if you
have to use smaller wire, and thus have to derate it a bit.

Complaints have been filed on many of these operators. That's
the easy part. Getting any action on the complaints is the hard
part. The FCC first kicks you back to the ARRL, then after the
AA refiles, they ignore it. Try to approach a federal prosecutor
and they'll toss it on the stack and proceed to ignore it while
they work on the backlog (currently more than 3 years worth
in most districts) of more important cases. Complain to your
Congressman, and a staffer will fire off a letter to a FCC
bureaucrat who'll reply that its been referred to the "self-policing"
amateur radio group for action. Yawn.

>It has been long evident that much of our problems are coming
>from the higher class hams who feel they own amateur radio.
>If the Federal government would go after the jammers, the neo

>see much less problems.

Well, the feds might make a case against jammers and bad language
use if a big enough fire were lit under them, those things *are* against
the regulations, but they can't touch unpopular political speech. That's
a First Amendment issue. The neo-nazis, and other political radicals,
are in the clear as long as they don't utter the seven deadly words on

the air. (It seems that it is mainly their self-appointed censors who do most of the swearing and jamming.)

There's much more money and political mileage to be made by prosecuting cases under the War on Some Drugs, however. Most federal prosecutors have their eyes on elective office and are out to make a name for themselves. A major cocaine bust, or bringing down an organized crime figure, plays better to the public than jumping on some guys who swear on a hobby radio. So it's pretty clear where they're going to expend their limited resources.

Of course at 1kHz, you might be getting into the area of too high a freq
for the core. Also...commutating SCRs can get tricky; IGBTs these days
probaby would make a lot more sense. 240 volts at 1500 watts is only
about 6 amps, which should be very easy for IGBTs... but read on...

: Of course if your *loads* need 60 Hz (motors, clocks, etc) then this won't
: work. You'll need sinewave 60 Hz in that case, and that's much more work
: than the transformer is probably worth.

: It may be worth your while to consider rewinding it, even if you
: have to use smaller wire, and thus have to derate it a bit.

An alternative is to supplement it with a small transformer or two.
If you can come up with a 50Hz transformer with a 30V 6A and a 15V
12A secondary, and 240V primary, you can hook the primary to

your line, then connect the 30V secondary in series with the primary side and the 15V secondary in series with the secondary side of your big transformer, all properly phased, so you get 240V-30V = 210V into the big guy, and 105V out of the big guy, plus the 15V from the little guy, for 120V output. If you don't need isolation between primary and secondary, only stepdown, there may well be another way you can hook things up to have them work well, perhaps not even requiring a second transformer if the one you have has a split primary.

|>
|> Each part which deals with a specific radio service begins with
|> definitions. For the ARS, the definitions are found in S97.3.
|> You're supposed to know Part 97 forward and back, Mickey.
|>

OK, it's there. I missed it because I was searching for "amateur station"
not "Amateur station". I gotta change my default to be case insensitive
on searches.

I was wrong on the "no definition" part, sorry.

" (5) Amateur station. A station in an amateur radio service consisting
of the apparatus necessary for carrying on radiocommunications."

It seems to me that a transmitter that can transmit on any frequency
falls quite nicely into this definition. How do you read into this that
other equipment is forbidden? If I "roll my own" transmitter out of
components, I don't think there is a requirement in Part 97 that it be
physically incapable of transmitting outside the ham bands. Is such a
"roll your own" transmitter forbidden to be part of an "amateur
station?"

What about all the people who have radios that can transmit on the old
220 MHz band. The FCC reduced the size of this band a while back. Do
the hams with radios still capable of transmitting on the frequencies
that aren't part of the ham bands any more have to throw their radios

away? Is such a radio excluded from the definition of "amateur station?" It is capable of out-of-band transmission.

Even if you can somehow read into this that out-of-band capable equipment is excluded from the definition of "Amateur station", the relevant paragraph does not discuss equipment that is included in the definition of "Amateur station", it discusses "any means of radiocommunication at its disposal". If other equipment is "at its disposal" even if it's not "part" of the station, it's permitted per 97.403.

"S 97.403 Safety of life and protection of property.
No provision of these rules prevents the use by an amateur station of any means of radiocommunication at its disposal to provide essential communication needs in connection with the immediate safety of human life and immediate protection of property when normal communication systems are not available."

As a sappy example, if you come upon an unconcious policeman in need of immediate medical help, who has had a car wreck, and "normal communication systems are not available.", you may use his police radio to call for help per 97.403, even if this radio is not included in the definition of your "amateur station."

|>
|> >You also won't find mention of SWR meters, microphones, tables, chairs,

|> This discussion is in regard to legal definitions; if folks are
|> going to quote from Title 47 they need to know the FCC's definition
|> of each and every term that appears in what they're quoting.
|>
|> Jeff KH2PZ

What do you mean when you say,

"Again I ask, at an "amateur station," just what equipment would be at one's disposal? (You might want to look up the definition of "amateur station" in Part 97 prior to answering. You won't find any mention of out-of-band gear.)"

Are you saying that an amateur station may not have an out-of-band capable station "at one's disposal" because it doesn't fall within your interpretation of the definition of "amateur station"? The things I mention aren't part of the definition either. Why am I allowed to have these things "at my disposal" and not a radio capable of out-of-band transmission? Please provide a quote from the rules that differentiates between an out-of-band capable radio and other equipment that's not part of the definition of "amateur station".

Do you contend that a radio that is capable of out-of-band transmission is not allowed to be included in the definition of "amateur station?"

Please quote the rule that forbids this.

Do you contend that an amateur station is forbidden to have equipment other than that included in the definition "amateur station" at its disposal? Please quote the rule that forbids this.

For ham radio communications, the distinction is "messages in codes or ciphers intended to obscure the meaning thereof,". There are some slight restrictions, embellishments, etc., but the "intent to obscure" is the key point. You can see the FCC Ham radio rules at

http://www.arrl.org/field/regulations/news/part97/

I REALLY have to wonder. I mean, if I were buying $10 worth of parts,
and they refused to give me the catalog, I'd just walk out.

I stand by my un edited statements. What other proof is needed?
By this response alone, it proves stumpers are braindead.

3104. Wanted: Syntor UHF manual

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-03 00:00:00 UTC
From: mfunaro@worldnet.att.net
Message-ID: <35eeef2f.56669729@netnews.worldnet.att.net>
Source record: 162831

Hello, looking for a manual for a Motorola Syntor X uhf radio.
The model is T74VBJ7D04AK
Please email me if you have one for sale.
Thanks, Mike N0XD
mfunaro@worldnet.att.net

3105. Easy to become a Stumpjumper

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-03 00:00:00 UTC
From: richwhiten@aol.com

Notes
=====

The abbreviations used in the propagation mode column are:

Tropo Tropospheric
Aurora Auroral
Spor-E Sporadic E
Meteor Meteor scatter
EME Earth-Moon-Earth (Moonbounce)
F2 F2 propagation
TEP Trans-Equatorial Propagation
Au-Es Auroral sporadic E
Iono Ionospheric scatter
FAI Field Aligned Irregularities

Rainsc Rain scatter

The distances were calculated using the International Ellipsoid of
1924 (polar radius 6356.912 km, equatorial radius 6378.388 km).

A description of the method used to calculate distances, with C source code,
is available can be downloaded as a 225k Word 6 file from the Internet at
http://www.kirsta.demon.co.uk/radio/dxrechow.doc.

Propagation modes are those reported by the stations concerned.
However, it can sometimes be very difficult to distinguish between
propagation modes. This is especially so on 50 MHz, where mixed-mode
QSOs are common, and to a lesser extent it applies on 144 MHz. The
propagation information should be read with this in mind.

Station positions were taken from the best available information,
in the following order of preference:

1. Exact latitude and longitude where known
2. Locator sub-square center if given
3. Approximate latitude and longitude from geographical location.
4. Distance as claimed by the QSO participants.
5. Corner of locator square nearest to QSO partner

Calculated distances may change if better information on station
location becomes available.

If you have any information on a possible record or exceptionally long
distance QSO please send it to the IARU Region 1 VHF/UHF/Microwave DX
record co-ordinator:

John Morris, GM4ANB,

via packet: GM4ANB@GB7EDN.#77.GBR.EU
via e-mail: john@kirsta.demon.co.uk

An on-line copy of the latest version of the table is at:

http://www.kirsta.demon.co.uk/radio/dxrec.htm

Other records tables
==========

The Swiss ATV association is collating a list of world ATV DX records.
See their web page at http://www.cmo.ch/swissatv

Please let GM4ANB know if there are any other international
DX record tables which could be listed here

3107. Wanted: GP-350 Walkie Talkies

3109. Satellite tracking software?

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-03 00:00:00 UTC
From: wseward@megsinet.net
Message-ID: <6sn5do$k6n$1@nnrp1.dejanews.com>
Source record: 162836

Does anyone know of any satellite tracking software for the PalmPilot? Or does anyone want to program one for me?...hehe. But seriously, I'm looking to be able to track satillites for QSOs with my HT while I'm out on the road or vacation. If you know of any I'd love to know. Thanks and 73!

Only 20 posts under the complete archive. Why _is_that? Perhaps it has something to do with your lack of testicles to post under your true identity.

>Care to discuss the content of your "back-up" bro's posts? I didn't think so.

Um, I have excellent writing and communication skills, unlike the ill-educated, sophmoric stumpjumpers. Why so many unavailable articles? Looks like you've been doing some damage control to cover your ass. That is why you post under an alias, isn't it, cowardly dolt. I'll bet you couldn't even pass the Novice exam.

>You are caught in yet another drug-induced lie, Vietnam Moocher. KC8JBO, a
>Stumpjumper? Something's wrong with that picture, eh?

Stupid, He was talking about the Stumpjumpers, period. And not what I post. Isn't it odd that only the stumpjumpers think they're perfect. It's _you_saying I am one of the evolutionary dead-end stumpjumpers, not Dan. But, I suppose the lack of having a father around during your formative years might explain your hatred of older men.

>Better file that story with your Secret Medal of Honor yarn.
>That's another tall tale you refuse to explain or even discuss. It's getting so you >are running out of topics for discussion.

Unlike yourself, who trots out the same tired, lame diatribe with each and every post. How did such a talentless clod, who has probably been in more foster homes then he can count.

>Liar, prove it. Who posts these "garbage" posts that you are referring to
>and what are their call signs? And prove that, too.

Mainly they come from posters like the trenchmouth@hotmail.com, a coward who won't let anybody know his name.

> Your dope has you
>imagining that every post in here that challenges you or "Spank Me" Roderick
>(KC8JBO) comes from a Stump Jumper. You've even got Ms. Cluck-Cluck calling
>NF3I a Stump Jumper "suck-up" and Scott has never once discussed his
>affiliations with that group.

Oh, do you presume to speak for the rest of the posters, you pompous ass?
Go back to the pizza oven, flunky.

> I doubt that Scott ever even heard of the
>Stump Jumpers except through what he reads in here.

The next time you're on your knees in front of him, ask in between your "jobs."

> I am pointing a finger
>at a couple of the real garbage posters. And one of them is you, Vietnam Dan.

Fine, point two fat, unwashed fingers, however, you have some pointing back at yourself, catamite.

You ever notice how much the stumpjumpers parallel the Germany of 1938-1945?
They have their leader(fz), minister of propagnada (fqf), chief of Gestapo
(tr), fat Hermann (oka), and lots of inarticulate flunkies to do their hatchet
work. Maybe "Marion" of Marietta, GA, is their Ernst Rhoem, he sounds a little
effeminite over the air. He must have a dildo on his operating chair from the
pitch of his voice. History does repeat itself, hey , maybe they'll all take
some cyanide, while their leader blows his head off down in the bunker.

The stumpjumpers' theme song should be Lou Reed's " Take a Walk on the Wild
Side."

That was a Morse code exam. CW requires an RF transmitter and
receiver. Did they use an audio device to generate your
Morse code exam? If so, it was not CW.

A "Morse Code exam?" Probably from tapes generated by computer and recorded over a patch-cord. If I read Mr. Coyle's remark right, he's pointing out that it was not an exam based on an on-off keying of continuous-wave RF. That the majority of hams who work CW and enjoy it have conflated the terms "CW" and "Morse Code" should, of course, make the meaning of "CW exam" sufficiently obvious.

I agree with the original post in some ways, but the inference that "if you give a CBer a ticket he's still a CBer" is ridiculous. It's only a half-truth, as ANYONE who is a dim-bulb will be so regardless of token awards or licenses.
I know a lot of hams who should not be on the air at all, and I know lots of CBers who should.
The bottom line is that if you're a complete moron, like many amateurs AND CBers to be heard every night on many bands, than it doesn't matter if you're a CBer, a ham, or a plumber, you're still a moron.
Both the CB and ham communities have a lot of which to be proud, and a lot of which to be hotly and angrily ashamed.
There IS no better hobby between the two factions, it is PEOPLE who raise the standards or lower them.
Listen to parts of 75-80 mtrs, and 14.300's... 2mtrs ain't lookin' so great lately, either... and then tell me that hams are any better, because of a lousy CW test and a ticket, than any other idiots out there! :-)

Have you considered what the bands would be like *without* the code having
been in place? You gonna insist that all those fine, happy, people on 11
meters just wanta have fun there, no ambitions to come on down and play in
our turf? And you say they won't leap at the opportunity for no-code,
no-real-test HF ham licenses?? Dream on.

Message-ID: <MPG.10590cc8ba7ce7be9896d2@news.erols.com>
Source record: 162863

R.C., thanks for the comments. There is indeed no 10 meter, nor any
10MHz. coverage. A closer look at the manual indicates that transmit
frequencies other than those specified *cannot* be programmed into the
rig, so I'm left with only the 17m band to play on...

There may indeed be a way to work around the published limitations,
but since this is a friend's brand-new rig that I'm just checking out
as a favor, I'd like to leave it as "pristine" as I can when I'm done
playing. All I'm really trying to do is confirm that it's basically
OK, and maybe burn some of the Cosmoline off the output stage.

I'll do some QSOs on 17 meters if I can, and try the rest of the bands
with a dummy load, low power, a freq. counter, and perhaps the XYL
listening on an HF receiver nearby for an RST report.

So, if I get on the radio tonight, start jamming the local two meter repeater,
and give "my" callsign as "KC5EGG JAMMING" then it is really you doing it,
right?

>Just look at
>the NALs for the past few years--license class with the most NALs EXTRA
>wooops.

Nothing surprising there at all. 1) extras are supposed to know the rules
and shouldn't break them; 2) HF is far easier for the FCC to monitor than
"local" VHF communications.

As part of a Master's thesis in English literature, I am compiling a bibliography of novels, plays, short stories, and poems in which radio communications (not MW or FM broadcast, though HF SWL is acceptable) figures prominently. By this I mean that the use of ham, military, and commercial long-range two-way radios is an important part of the plot or main idea. It doesn't have to be the central point, but just prominent rather than incidental.

Please tell me of any titles you know of, either recent or long ago. I am interested in all aspects of radio, but invention, early experiments, CW operation, and use of tube equipment particularly. I know that a number of spy/intrigue/adventure novels have been written specifically for a ham audience, and I want to know about those too, but am more interested in what is considered serious literature (man, am I going to get flak for saying that!).

So, email me your radio reading list! Please include as much information as you can: author, title, publisher, year of publication, place of publication, and ISBN if available. When I get a respectable list, and check all the info, I will be posting the bibliography to newsgroups, and if you want an email copy, let me know in your response. Thanks, 73

Assuming adequate written exams, a lot better off than they are
today. The reason that the written exams are so dumbed down is
that some people think Morse code skill can be substituted for
knowledge of electronics.

I have learned that the catalog price will be changed to $0.00 in the point of sale system at RadioShack. I would imagine this would happen as soon as the programmers can download the new price into the store's computers.

So all your complaining was heard by the powers that be at RadioShack.

Now, can you find something else to whine about?

Yaesu FT-2400 45 Watt 2M Mobile

Radio Hard Reset
CPU RX/TX re-program Instructions

This will be nescessary after completing the out of band modification and
from then on if one of the following happens:

1) Loss of power to the CPU occurs. This will happen if the internal
lithium battery is dead and or has been replaced.

2) May also be nescessary after a sudden power drop, ie. starting your
vehicle while it's battery is very run down.

3) An accidental Hard Reset occurs.

Hard Reset - Push D/MR and Rev/Skip while turning power on.
Display will read: 28.00

Program RX range - Tune Display to read: 138.00
Push D/MR

Tune Display to read: 174.00
Push D/MR
Display will read: 28.0

Program TX range - Tune Display to read: 138.00
Push D/MR

Tune Display to read: 174.00
Push D/MR

*Please note after hard reset default repeater offset is 000.
You must change offset back to desired number, ie. 600.
Of course all programed memories are lost.

2.1 Comments on Solar Activity.

Solar activity was significantly higher this month. Flare activity
during the month of August was dominated by one solar region.
This region, SEC active region number 8307, rotated onto the visble solar disk
on 18 August. The region produced four optically correlated X class
flares, and was the likely candidate for another X class event, which
was optically uncorrelated and occured as 8307 was rotating into
view. The region produced an X1/3B flare at 2212UT on
24 August. A proton/PCA event was associated with this flare,
beginning at around 0100UT on 25 August and ending near 1230UT on 29 August.
This solar event produced a significant geomagnetic disturbance.

==========

3. GEOMAGNETIC DISTURBANCES (for Learmonth, WA)

DATE COMMENTS
1 Aug 98: Active periods observed local during local night hours.
This was decline of activity observed on 31 July.
06-07 Aug 98: Major storm periods observed during local night hours on
06 August. Active periods observed 07 August as activity
declined.
19-20 Aug 98: Active to minor storm periods observed during this interval.
22-23 Aug 98: Active to minor storm periods observed during this interval.
26-28 Aug 98: Sudden impulse observed near 0700UT on 26 August. Field
reach major to severe storm levels on 27 August. Activity
declined on 28 August, with active to minor storm periods
observed.

The largest event for the month occurred on 27 August with the local
geomagnetic A index reaching 54. The planetary A index reached
112, with severe storming observed at some sites. Solar wind speeds
rose from pre-shock values of around 400km/sec to over 850km/sec on
the 28 August. The last time the Ap index approached 100 was on the
4th of May 1998, when it reached 96. Activity on 06-07 August was
due to a coronal mass ejection of uncertain origin. Activity during
19-20 August is believed to be associated with a coronal hole. The origin
of activity during the interval 22-23 August is unknown.

==========

4. IONOSPHERIC DISTURBANCES (for Australian Region)
01-03 Aug 98: Mild depression of 15-20% observed at some sites in the region,

with spread F observed during local night hours.
06-07 Aug 98: enhancements of up to 70% observed during local night hours at
Darwin on 06 August, then depressed 15-30% at times local day
on 07 August. Spread F observed southern region during local
night hours during this interval.
21 Aug 98: depressed 30% southern region
22 Aug 98: enhancements of up to 120% observed during local night hours
at Darwin in association with geomagnetic activity. Spread F
local night hours southern region.
25 Aug 98: PCA Event began 25/0100UT and ended 29/1230 UT.
27-28 Aug 98: depressed 50% southern region after local dawn on
27 August. Continued depressions of 50% observed 28 August.

The deepest depression for the month was observed on 28 August
in association with geomagnetic storm activity. High latitude/polar
HF communications were severely degraded by the polar cap absorption
event (PCA).

To all radio amateurs

SB PROP ARL ARLP036
ARLP036 Propagation de K7VVV

We just experienced a new high in solar flux for the current cycle. On Monday, the last day of August, the flux was 178.5, which is the highest solar flux since it was 179.6 on February 10, 1993 during the downside of the last solar cycle.

Now that August has passed, it is time to look at the average solar flux for the month and compare it with previous months. Average solar flux for August was 136, which is a nice increase over May through July, which were 106.7, 108.5 and 114.1. The average solar flux for the past week was 157.6, so the trend continues. Compare this with the same week last year from ARLP036 in 1997, which had an average flux of 92.7, and the increase is almost 65 points. The average solar flux for the previous 90 days increased from 117 to 121 this week, and the solar flux was above these values on every day. All of these observations point to a strong upward trend in solar activity.

Solar flares produced some tremendous geomagnetic disturbances, with the planetary A index hitting 112 on August 27 and the K index rising as high as 8.

Here is the forecast for the next few days and beyond. Solar flux for Friday through Sunday is predicted at 160, 160 and 155. For the same period the predicted planetary A index is 12, 12 and 10. Solar flux is expected to go below 150 after September 8, below 140 two days later, then bottom out around 125 from September 12 through 14. It is expected to rise again above 140 after September 17, to 150 two days later, 160 by September 24, and above 170 after September 26. Geomagnetic conditions could be unsettled around September 5, and stormy around September 18 and 19. All of this is based on activity during the previous solar rotation.

VE3BSJ asked a question that deserves coverage again, and that concerns the significance of the A and K indices. He wanted to know if HF operators should hope for high or low A and K numbers. My answer is, that unless you are looking for VHF auroral propagation, low geomagnetic indices are good. The K index is updated every three hours and can be heard on the WWV at 18 minutes after each hour. A one point change in the K index is quite significant, and generally conditions are better if the K is below three and are worse if it is higher. When the K index hit 8 last week, that was extremely high.

The A index represents the K indices for the previous 24 hours, and a few points on the A index scale are not very significant. If the you had 24 hours of K at 1, the A would be 4. Likewise, K of 2 corresponds to A of 7, K of 3 corresponds to A of 15, K of 4 means A of 27, K of 5 means A of 48, K of 6 means A of 80, K of 7 means A of 132, K of 8 means A of 207, and K of 9 means A of 400. Of course the K index rarely stays the same for 24 hours, so the resulting A index is somewhere in between these values. For example, on Wednesday the planetary K index was 2, 1, 1, 2, 2, 3, 3, and 3, and the resulting A index for the day was 8. Last Friday the Boulder K index was 5, 4, 3, 2, 5, 4, 3 and 3, and the Boulder A index was 26.

KH6BZF reminds us that as we head toward the Fall equinox in a little more than two weeks, good openings toward Europe before noon local time should be common, as well as to the southern hemisphere later in the day, with South America first, and the Pacific later. Ten and twelve meters should be getting better as the days get shorter and the solar flux rises.

WM7D has a nice graph on the web showing the increase in solar activity at http://www.wm7d.net/hamradio/flux.html.

In last week's bulletin the packet and email addresses for the author were slightly garbled with the omission of the sign in some versions. The author can be contacted via email at tad@ssc.com, or via packet at K7VVV @ N7FSP.WA.USA.NOAM.

Sunspot Numbers for August 27 through September 2 were 153, 167, 128, 136, 133, 129 and 116 with a mean of 137.4. 10.7 cm flux was 135, 139.2, 146.5, 163.3, 178.5, 177 and 163.4, with a mean of 157.6, and estimated planetary A indices were 112, 25, 18, 15, 22, 18, and 8, with a mean of 31.1.

SB QST ARL ARLB068
ARLB068 New vanity address for paper filers

Effective September 14, there's a new address at Mellon Bank for
vanity call sign paper application filers who submit Form 610V and
FCC Fee Remittance Form 159 with the vanity fee via the US Postal
Service.

The new address is FCC Wireless Bureau Applications, POB 358130,
Pittsburgh, PA 15251-5130.

Electronic Form 610V Vanity Call Sign filers will continue to send
Form 159 with the vanity fee to FCC Amateur Vanity, POB 358994,
Pittsburgh PA 15251-5994.

A reminder: The vanity call sign filing fee drops from 50 dollar(s) to 13
for dollar(s) applications filed on or after September 14, 1998.

The FCC in Gettysburg reports it has processed vanity applications
received through August 14.

ARRL Bulletin 67 ARLB067
From ARRL Headquarters
Newington CT September 4, 1998
To all radio amateurs

SB QST ARL ARLB067
ARLB067 Earl downgraded; some ham activity continues

Hurricane Earl has been downgraded to a tropical storm after coming ashore in the Florida Panhandle. The storm is moving northeast toward Georgia with winds of just 45 MPH. The storm dumped nearly two feet of rain. Two fishermen are reported missing in Florida. Trees were downed, some street and residential flooding has occurred, and some areas were reported without electricity.

Hams in Northern Florida deployed at shelters and emergency operation centers in anticipation of the storm. ARRL Northern Florida SEC Nils Millergren, WA4NDA, reports the Northern Florida Emergency Net on 3.950 MHz has been closed but is ready to reactivate if needed.

In Florida's Capital District, a VHF emergency net was active and weather spotters were posted. Other hams are assisting at shelters, at the county EOC, and at the National Weather Service.

EOCs and shelters in Jackson, Walton, and Washington counties also have Amateur Radio support, and a VHF net was active in Jackson County.

IN THIS EDITION:

* +FCC fixes goofs on NPRM
* +Florida hams respond to Hurricane Earl
* +LMCC quietly backing off 70 cm request
* +Question Pool Committee puts changes on hold
* +Miquelon operation ends as Air Canada strike begins
* Solar update
* IN BRIEF: This weekend on the radio;
* SARL HF Field Day Contest; New address
* for vanity call sign paper filers; Amateur
* Radio Awareness Day; N4FK leaves the FCC
* for State Department; New ATV records?;
* ARRL Audio News recording mystery solved!
* W4Z operation set; TAPR DSP interface
* boards and enclosure kit

+Available on ARRL Audio News

FCC ISSUES ERRATA ON "STREAMLINING" NPRM

The FCC has clarified most of the questions and confusion raised by its recent Amateur Radio rules "streamlining" proposal, WT Docket 98-143. The Commission this week issued some corrections and clarifications in a 13-page Errata to the original NPRM, released in early August. The FCC said the corrections were issued "to conform the proposed rules to the proposals discussed in the text of the Notice."

A major change from the original rulemaking proposal was to effectively reinstate language providing for a physician's certification that an applicant is unable to pass a 13 or 20 WPM Morse code test. In the NPRM text, the FCC invited comment on this issue and on an earlier ARRL

proposal, RM-9196. The ARRL had asked the FCC to require anyone applying for an exemption pursuant to a doctor's certification to first attempt the higher-speed test before getting exam credit.

The Commission also clarified its intention to retain the current 365-day time limit for a Certificate of Successful Completion of Examination (CSCE) to remain valid.

The FCC also added the words "Element 1(A), 1(B) or 1(C)" to proposed Section 97.301(e), referring to the 5, 13, and 20 WPM code examination elements, respectively. While this clarified the need to at least have credit for the 5 WPM Morse code examination to gain Novice/Tech Plus HF privileges, neither the original NPRM nor the Errata list Element 1(A)--the 5 WPM code test--as a specific requirement for any license class. The FCC appears to be proposing to provide that a Technician licensee could gain HF privileges by passing a 5 WPM code test. Just how this would happen in the real world remains unclear.

The FCC describes elsewhere in its proposed rules how applicants may claim credit for Element 1(A), however. A proposed change at Section 97.507(d) that would have substituted the words "no less than 5 WPM" has been dropped. The current wording says "no less than the prescribed speed."

The FCC also addressed apparently inadvertent rules changes in the NPRM. Gone is language that would have eliminated Extra class phone and image privileges in the 20 and 15-meter Extra class phone subbands and data privileges in the 20 and 15-meter Extra class CW subbands. Also gone is wording that would have dropped data privileges from Novices and phone privileges for current Tech Plus operators on 10 meters. The FCC also eliminated wording that seemingly would have limited Novice CW operation to "only messages sent by hand."

The FCC's Errata also indicate that the Commission intended to retain the current 200 W PEP power limit on the current Novice/Tech Plus HF bands. The NPRM had proposed imposing the 200 W PEP power restriction on HF only when the control operator is a Novice.

The FCC also made it clear that someone holding a Technician class license granted before February 14, 1991, could get examination credit for written Element 3(A). The Errata also add Element 1(B), the 13 WPM code test, to the elements that may be prepared by an Advanced class Volunteer Examiner.

The Errata also correct several apparent typographical errors and make other relatively minor changes to the original NPRM.

The Errata fail to address another discrepancy in the NPRM that was noted earlier by the ARRL. The NPRM gives an applicant who held a Technician license (expired or otherwise) granted before March 21, 1987, examination credit for written Element 3(B). But the proposed rules do not extend similar credit to an applicant who had held a General or higher class license, once the grace period is past.

The FCC Errata document is on the ARRLWeb at
http://www.arrl.org/news/restructuring/98-143/errata.html

FLORIDA HAMS RESPOND TO HURRICANE EARL

Hams in Northern Florida responded this week as Hurricane Earl paid a visit to the Florida Panhandle. Northern Florida District Emergency Coordinator Nils Millergren, WA4NDA, reports that hams served as weather spotters and provided communication support at shelters and emergency operation centers in several counties. As the storm approached, the Northern Florida Emergency Net on 3.950 MHz was activated.

Hurricane Earl was downgraded to a tropical storm September 3 after lashing the Florida Panhandle with high winds and torrential rains. The storm dumped nearly two feet of rain. Two fishermen were reported missing in Florida. Trees were downed, some street and residential flooding has occurred, and some areas were reported without electricity.

In Florida's Capital District, a VHF emergency net was active, and weather spotters were posted along coastal Highway 98. EOCs and shelters in Jackson, Walton, and Washington counties also had Amateur Radio support, and a VHF net was active in Jackson County. In Bay County, the Sheriff's Office and a medical center also used Amateur Radio Support after the telephone system became overloaded.

AAA SAYS LMCC "BACKING OFF" 70 CM REQUEST

An official of the American Automobile Association says the Land Mobile Communications Council is backing away from its request that the FCC reallocate 420 to 430 MHz and 440 to 450 MHz from the federal government to the Private Mobile Radio Service (PMRS). And the AAA's Gary Ruark says he doubts the FCC will ever agree to the request in the face of strong support for continued Amateur Radio presence on the band. Amateur Radio has a secondary allocation on the band. The AAA is an LMCC member.

In an August 31 letter to San Diego SEC David Doan, KC6YSO, Ruark, said that strong support for ham radio from the Association of Public Safety Communications Officials-International (APCO) and the National Telecommunications & Information Administration caused the LMCC to back off its demand to reallocate the 70 cm subbands it had requested last spring. Because of that, Ruark said, "it is doubtful that the FCC would ever agree to that portion of the LMCC petition addressing sharing with amateur radio operators."

In June, AAA asked the LMCC to file supplemental comments with the FCC to withdraw the request to share the 70 cm band with Amateur Radio. The LMCC declined. "The decision was based on the perception that to change the language now could undermine the rest of the petition," Ruark explained. Ruark, the AAA's emergency road service technical communications specialist, said the AAA would be unable to get the LMCC to reverse its position "because there is not enough support to win a vote on the matter."

But Ruark said it was his understanding that the LMCC "would not continue to actively seek access to the amateur radio spectrum, and would forfeit that language during FCC negotiations in exchange for more important spectrum allocations."

A copy of Ruark's letter to Doan is available on the ARRLWeb page, http://www.arrl.org.

QUESTION POOL CHANGES PUT ON HOLD

Citing "almost certain and imminent restructuring of licensing," the Question Pool Committee--the group that formulates the questions that show up on Amateur Radio examinations--has put further changes to the question pool on hold until restructuring issues are settled.

ARRL/VEC Manager Bart Jahnke, W9JJ, says the decision includes postponing the Advanced class question pool update, scheduled for revision and release this year for implementation next July 1.

The Committee says restructuring could cause anything from making a few rules questions unusable to "total deletion of one or more question pools or even combination of two or more of the present question pools into a differently configured question pool."

The decision to put further revisions to the question pool on hold had majority support of the National Conference of VECs. The QPC will postpone its current question pool review schedule "until the direction of such restructuring is more certain," QPC Chairman Ray Adams, W4CPA, said in a statement.

Adams said the QPC would announce when it's decided to resume alterations to the question pools. "The action required by that decision could range from a simple resumption of rewriting of the question pools much in the same manner as we have in the past to issuing any necessary supplements containing the changes to each of the question pools in use to combining certain pools in whatever manner may be dictated by the Commission," he said.

FP/N9PD OPERATION CONCLUDES SUCCESSFUL WEEK

The FP/N9PD operation from Miquelon Island--the first DXpedition to provide near-real-time logs via the Internet--wrapped up operation this week. "We are shutting down," Rick Royston, KF9ZZ, announced September 2 at 0200 UTC on the group's Web site, http://www.prairiedx.com. The FP/N9PD operation logged slightly more than 10,000 contacts, about 80% of them on SSB. The group logged contacts with 128 DXCC entities.

The seven-man team from the Chicago-based Prairie DX Group battled Murphy in its efforts to keep up the QSO count from the remote French island off the coast of Newfoundland. First plagued by practically nonexistent HF propagation due to solar flares, the FP/N9PD operation later lost one of its amps. Hurricane Bonnie also blasted by producing 60 MPH winds at one point, but no antennas fell.

Ultimately, it appeared that the team might have problems getting home. Air Canada and Northwest pilots went on strike as the FP/N9PD team planned to depart St Pierre et Miquelon by air for Halifax, Nova Scotia. However, team member (and ARRL RF Safety Committee Chairman) Greg Lapin, N9GL, reports everyone got home safely--even if a day or so later than planned. On September 2, Royston said the complete FP/N9PD logs would be posted on the group's Web site as soon as possible. The DXpedition team had posted near real-time logs on the Internet during its weeklong operation from Miquelon Island. Lapin said the group's software still had a few bugs, and the Internet logging connection had trouble keeping up with the QSO rate. This meant some stations could not find themselves on the Web log.

QSLs for the FP/N9PD operation go to N9PD, Prairie DX Group, 1206 Somerset Ave, Deerfield, IL 60015 (SASE, IRC or $1 encouraged) or via the QSL bureau. For more information, contact Fred Levinson, KF9YL, e-mail efl@interaccess.com.

SOLAR UPDATE

Propagation prognosticator Tad Cook, K7VVV, Seattle, Washington, reports: We just experienced a new high in solar flux for the current cycle. On Monday, the last day of August, the flux was 178.5, which is the highest solar flux since it was 179.6 on February 10, 1993 during the downside of the last solar cycle.

Now that August has passed, it is time to look at the average solar flux for the month and compare it with previous months. Average solar flux for August was 136--a nice increase over May through July, which were 106.7, 108.5 and 114.1. The average solar flux for the past week was 157.6, so the trend continues. Average flux during the same week last year was just 92.7, so the increase is almost 65 points! The average solar flux for the previous 90 days increased from 117 to 121 this week, and the solar flux was above these values on every day. All of these observations point to a strong upward trend in solar activity.

Solar flares produced some tremendous geomagnetic disturbances, with the planetary A index hitting 112 on August 27 and the K index rising as high as 8.

Here is the forecast for the next few days and beyond. Solar flux for September 4-6 is predicted at 160, 160 and 155. For the same period the predicted planetary A index is 12, 12 and 10. Solar flux is expected to go below 150 after September 8, below 140 two days later, then bottom out around 125 from September 12 through 14. It is expected to rise again above 140 after September 17, to 150 two days later, 160 by September 24, and above 170 after September 26. Geomagnetic conditions could be unsettled around September 5, and stormy around September 18 and 19. All of this is based on activity during the previous solar rotation.

VE3BSJ asked about the significance of the A and K indices. He wanted to know if HF operators should hope for high or low A and K numbers. My

answer is: Unless you're looking for VHF auroral propagation, low geomagnetic indices are good. The K index is updated every three hours and can be heard on WWV at 18 minutes after each hour. A one-point change in the K index is quite significant. In general, conditions are better if the K is below3 and are worse if it is higher. When the K index hit 8 last week, that was extremely high.

The A index represents the K indices for the previous 24 hours, and a few points on the A index scale are not very significant. If the you had 24 hours of K at 1, the A would be 4. Likewise, K of 2 corresponds to A of 7, K of 3 corresponds to A of 15, K of 4 means A of 27, K of 5 means A of 48, K of 6 means A of 80, K of 7 means A of 132, K of 8 means A of 207, and K of 9 means A of 400. Of course the K index rarely stays the same for 24 hours, so the resulting A index is somewhere in between these values. For example, on September 2, the planetary K index was 2, 1, 1, 2, 2, 3, 3, and 3, and the resulting A index for the day was 8. Last Friday the Boulder K index was 5, 4, 3, 2, 5, 4, 3 and 3, and the Boulder A index was 26.

KH6BZF reminds us that as we head toward the fall equinox in a little more than two weeks, good openings toward Europe before noon local time should be common, as well as to the southern hemisphere later in the day, with South America first, and the Pacific later. The 10 and 12-meter bands should be getting better as the days get shorter and the solar flux rises.

WM7D has a nice graph on the web showing the increase in solar activity at http://www.wm7d.net/hamradio/flux.html.

Sunspot numbers for August 27 through September 2 were 153, 167, 128, 136, 133, 129, and 116, with a mean of 137.4. The 10.7-cm flux was 135, 139.2, 146.5, 163.3, 178.5, 177, and 163.4, with a mean of 157.6. The estimated planetary A indices were 112, 25, 18, 15, 22, 18, and 8, with a mean of 31.1.

Contact Tad Cook, K7VVV at tad@ssc.com.

In Brief:

* This weekend on the radio: The All-Asian DX Contest (SSB), the North American Sprint (CW), and the LZ DX Contest are on tap this weekend. See September QST, page 103, for details. Just ahead: The ARRL September VHF QSO Party is September 12-13. See August QST, page 103, for the rules. Also that weekend, the Worked All Europe (SSB) Contest, the North American Sprint (SSB), and the Ohio and Indiana QSO parties. See September QST, page 103, for details.

* SARL HF Field Day Contest: The South African Radio League conducts its annual HF Field Day Contest this weekend. Listen for ZS5HAM, operated by the Highway Amateur Radio Club, on all bands. QSL to The Highway Amateur Radio Club, PO Box 779, New Germany, 3620, South Africa.--thanks to

Edwin Musto, ZS5BBO

* New address for vanity call sign paper filers: Effective September 14, there's a new address at Mellon Bank for vanity call sign paper application filers who submit Form 610V and FCC Fee Remittance Form 159 with the vanity fee via the US Postal Service. The new address is: FCC Wireless Bureau Applications, POB 358130, Pittsburgh PA 15251-5130. Electronic Form 610V Vanity Call Sign filers will continue to send Form 159 with their vanity fee to: FCC Amateur Vanity, POB 358994, Pittsburgh PA 15251-5994. A reminder: The vanity call sign filing fee will drop from $50 to $13 for applications filed on or after September 14, 1998. The FCC in Gettysburg reports it has processed vanity applications received through August 14. On September 2, it granted 52 new call signs; another 87 applications landed in the work in process (WIPs) pile for further processing.

* Amateur Radio Awareness Day: September 19 is Amateur Radio Awareness Day (and IARU World Amateur Radio Day)! It's time to promote Amateur Radio and elevate public awareness of the hobby by writing an article for your local paper, establishing a "Field Day" type station in a local mall or park, or perhaps making a presentation before a civic group. Take time to acquaint the public with Amateur Radio. For publicity kits and ideas, contact Jennifer Gagne, N1TDY, at ARRL HQ; tel 860-594-0328; e-mail jgagne@arrl.org.

* N4FK leaves the FCC for State Department: Francis K. Williams, N4FK, departed the FCC August 29 to accept an international communications and information policy position at the US State Department. Williams had been with the Commission for 32 years, starting his career there in 1966 as an electronics engineer. Williams has played a major role in preparing for, and representing the US at international conferences. Currently, Williams is in charge of US preparations for conferences related to regulatory matters within the ITU Radiocommunication Sector. He now heads all US preparations for the Special Committee for Regulatory and Procedural Matters, developing international consensus for WRC2000.--FCC

* New ATV records? New distance records for fast-scan ATV on 10 and 24 GHz were claimed this summer. HB9AFO and colleagues report a new world's record on 10 GHz ATV involved a contact between TM2SHF on Corsica (JN42hf) and EA5/HB9AFO/P on Monte Pego in Spain (IM98xu). The distance was 821 km (approximately 510 miles), beating the prior record of 701 km. P5 signal levels were exchanged over a more-than-two-hour period at power levels of between 1 and 20 W. A new European ATV record was broken on 24 GHz. A successful one-way transmission was made from TM2SHF in JN42hf on Corsica, to F/HB9AFO/P in JN23we, Mont Caume, France, a distance of 248 km (approximately 154 miles). The transmitter was running 200 mW. A photo of the HB9AFO crew is available at http://www.cmo.ch/swissatv.--Michel Vonlanthen, HB9AFO; John Jaminet, W3HMS

* ARRL Audio News recording mystery solved! A few users have reported consistent problems recording certain RealAudio clips from The ARRL Audio News. ARRL Webmaster Jon Bloom, KE3Z, experimented with RealPlayer Plus--the $30 program that allows a user to record RealAudio clips onto a computer. He discovered that if a user accepts the clip's "title" string as the default file name and that title contains the "/" symbol, either RealPlayer Plus or Windows (we're not sure which) thinks the part of the string before the "/" is a directory path, and RP+ can't save the clip! To eliminate this problem, we've removed the "/" symbol from the title field in the program's open, ID break, and close files.

* W4Z operation set: Special event station W4Z will operate from the International Jewish Arts Festival on Long Island, New York, on Labor Day weekend, Sunday, September 6, and Monday, September 7. Operators will be members of the Great South Bay Amateur Radio Club. The W represents the US and the 4Z represents Israel. W4Z will make contacts with amateurs in Israel to demonstrate the capabilities and goodwill of Amateur Radio. General contacts also will be made. W4Z is expected to operate on SSB between 14.240 and 14.270 MHz. QSL direct only with an SASE to Rich Tygar, AC2P, 5 Chelmsford Dr, Wheatley Heights, NY 11798.--Tom Carrubba, KA2D via The Hudson Loop

* TAPR DSP interface boards and enclosure kit: TAPR will take orders until September 15 for its first round of EVM56002 DSP interface kits with enclosure. The kit provides all parts, including screws and standoffs, schematics and documentation (assembly and operation), and software. It does not include a Motorola EVM56002 (DSP) interface board. The price is $135 for TAPR members; $150 for nonmembers (plus shipping and handling). TAPR kits can be complex, and the interface kit does require some knowledge and experience to successfully go from a kit to a finished, usable unit. For data radio applications (ie, 9600-baud FSK), modifications must be made to your radio for proper operation of the EVM interface. In addition, the interface kit requires that you have a Motorola EVM56002 interface unit, available from several electronic distributors. Payment must be made with each order (credit card, check, or money order). Orders will be taken for the first 200 units. If more than 200 units are ordered, then a second or third batch will be done as soon as additional parts inventory can be purchased and kitted. Send orders to TAPR, 8987-309 E Tanque Verde Rd #337, Tucson, AZ 85749-9399; tel 940-383-0000; fax 940-566-2544. For more information, see the TAPR Web site, http://www.tapr.org/tapr/html/dsp56002evm.html.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide essential news of interest to active amateurs promptly and efficiently, and in advance of publication in our official journal, QST. The ARRL Letter strives to be fast, accurate, concise, and readable.

Material from The ARRL Letter may be reproduced in whole or in part in any form, including photoreproduction and electronic databases. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, ARRL members should visit the League's Members Only Web Site at http://www.arrl.org/members/ and follow the registration instructions. Registration also provides access to The ARRLWeb Extra, a news and feature magazine.

For members and nonmembers alike, The ARRL Letter also is available free of charge from these sources:

* The ARRLWeb page, http://www.arrl.org/arrlletter/. NOTE: The ARRL Letter will be posted each Friday as soon as possible after publication.

* The Netcom listserver operated by volunteers from the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list". (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via the Netcom listserver.)

* The HIRAM BBS: 860-594-0306. The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published Fridays). For example, to request The ARRL Letter file for Friday, September 4, 1998, type "send ltr0904.txt". Then, on a separate line, type "quit". The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

You misspelled "cry." It's supposed to be
-.-. .-. -.--
And your spacing is inconsistent.

>-... .- -... .. . ... -.. .. .
>

And with that, I think you've proven that you're not proficient enough
with the code to be REAL.

I'm a real ham. I have held my Extra Class license for over 20 years.
I can still run 25 WPM CW and in contests I can manage bursts to 35
WPM. Yet I don't see the point of mandating CW as an entry
requirement.

Your argument is indefensible, pointless, and infantile. What's more,
you're not even using your own name. If this is the best you can do,
we no-code proponents will have an easy time making our case.

How about a reasoned debate instead of this ridiculous name calling?

Hi Dick,

That prospect doe not worry me for two reasons.

First of all I don't believe the no-real-test strawman. IMHO that is
just a small communist fish(aka red herring)to divert attention from
the lack of real reasons for continued code testing.

Secondly I don't find the airwaves above 50MHz to be befouled by these
barbarians you so fear. I have read tales on the newsgroups of the "out
of control 2M bands etc." but I have never really heard it for myself
on the air. I don't think it's just where I live since a travel a great
deal in my profession and always carry some VHF/UHF equipment.

Fact is that the people most upset by a local 75M jammer are the
codeless techs. They apparently took the rules they learned to pass
their examinations seriously and they wonder why the "higher qualified"

HF licensed hams would act this way. Fact is some of the best operators I hear have very new callsigns. People in general want to fit in and they listen and learn and seem to still remember the rules both FCC and Golden it would be nice if the more venerable among us would do the same.

As I travel throughout the country I find more often than not the codeless folks are the presidents of the local clubs, organizing the hamfests and in general contributing to the hobby. Since I do a lot of speaking and demos at club meetings and hamfests I do have an idea of who is doing what.

There are some very serious folks in the no code ranks and they deserve better than they get on these newsgroups. You should try satellites some time, no one there gives a rat's behind what class you are and we even do CW. I have to admit it get through better than SSB in some cases. Why I even operate CW both on the birds and weak signal I just don't think it should be a pass/fail testing element and I really don't think it is much of a filter.

[...]

Watch out for the inrush current - you can easy blow your ammeter if you
connect directly to the lne voltage.

Use a variac and slowly adjust the voltage from zero. Monitor the current
and shut down if it becomes excessive.

I agree with John - I think the transformer may be faulty, or you might
be confusing "warm" with "hot".

Best Regards,

Mike

Cecil is living proof why we don't want to 'dumb down' amateur radio anymore
than has already been done.

Cecil doesn't mind displaying his stupidity in public (He'd make a fine
ARRL board member.)

In article <35EF166A.2033@ibm.net>, w6rca@ibm.net wrote:
>That was a Morse code exam. CW requires an RF transmitter and
>receiver. Did they use an audio device to generate your
>Morse code exam? If so, it was not CW.

Hey Cecil,
Sound is a wave and a steady pitch is a Continuous Wave.

>the definition in Part 97. Maybe you ought to take a glance at it Jeff.
>I had hoped to settle the issue when I provided the reference last time
>this discussion came up.

97.3(c)(1) defines CW as an RF emission having a designator of A, C,
D, H, J, or R as the first symbol, 1 as the second symbol, and A or B
as the third symbol. In other words, it is On Off keyed amplitude modulation
of an RF carrier using the Morse code.

97.503(a) says elements 1A, 1B, and 1C are tests of the ability to correctly
send by hand and receive by ear texts in the International Morse code. No
mention of RF emissions is included in this section. It is not a CW test.
It is merely a Morse code speed test.

I would imagine no more than a handful of hams would be able to muster
that kind of power. They probably wouldn't do it for very long, either;
the operating costs would be prohibitive.

And what effect would they have on broadcasters with >10 dB more power
and as much as 20 dB more ERP?

Does anyone know if this radio can support CTCSS decode
like it's FRS cousin?

It really makes me mad that the FRS version encodes and
decodes but the ham version only encodes.

It's quite a neat little radio but I'm thinking I should
have saved my pennies and bought a pair of the VX1Rs.

Hi Steve,

I have an Icom 775DSP (I know there was a model 775 [without DSP] but I don't think many were sold).

In any case, if you mean 775DSP, it is a great radio! Don't know what your particular area of concern might be in a new rig, but mine is always receiver performance, and the 775DSP receiver is absolutely superb. I've had mine about 18 months now, and have compared it side-by-side with other fine radios like the FT1000D, FT1000MP, 950SDX, etc. In my opinion, it is the best of the current crop of HF rigs.

you asked for it. wrote:
> Sound is a wave and a steady pitch is a Continuous Wave.

Sound is a transverse wave. CW is defined as an electromagnetic
wave mode.

Also, a steady pitch cannot contain any information and therefore
cannot be used for a Morse code test.

Hi:
Is there anyone out there that has some sort of
programming software for this radio.

I know that the radio is EPROM controlled and you
need the dedicated programmer from the manufacturers
but, if you remove the EPROM only instead of the
whole board I imagine that it can be programmed
with some software especially written.

Any comments or suggestions are apreciated

My FT-900 is installed in a 1995 Cherokee. It is wired directly to the battery, and the power leads are routed thru shield braid. The braid is bonded to the body in (3) places, and to the engine block at the firewall.

The rf deck hangs on the rear seatback. A short braid runs from the gnd lug to the caego floor. The coax trails out the hatchback, and the antenna is mounted on the hitch ball mount. From the ball mount to the bumper there is 2" braid, and from the bumper to the body the same braid at (3) points. Smaller braid (11/2") connects the tail pipe to the body, the hood to the body, each door, and the hatch back in the same way. Noise with the blanker on is on 80,40,20, and only slightly higher on 15 and 10m. With the blanker off, there is about an S5 level as you have found. The biggest culprit remaining is the AC fan motor, but I have not yet tackled that.

Who would the "big boys be"? As you know, the FCC has been rendered
useless in controling behaviour on the Amature bands by our ACLU
friends. Most of what goes on, however obnoxious, is now considered
their right to do under free speech, freedom of expression, and there
are 100s of lawyers lined up to represent them in making the FCC just a
lonley band of eunochs with frustration on their minds. The only case
the FCC can make stick now days would be someone slopping over the edge
of the band or just totally out of band operation.

You of course can prove this unrealistic number to be factual right?
How bout 10,000 meeting the criteria you claim for the 100. No I have
no idea either but my figure is just as apt to be right as yours in this
case.

100 out of 500,000 HF-eligible hams suggests to me
> that we have a pretty good filter. All I have to do is tune my HF radio
> down to 27MHZ to hear I'm right.

One, if a filter only kept out 100 over 500000 and also kept out the numbers of good people we know of then maybe the cost is too high for the return. That is my contention.

Two, What makes you think what you heard on 27mz was only CBers? You obviously have no idea how many of your brother hams hang out down there to get away from elitists on the Ham Bands. Yes even HF rated folks.

You can plot primary current versus applied voltage (no load on secondary) and get a really good idea of what's going on. If it goes up linearly at a very reasonable current, then rather quickly starts going up at a much steeper slope, it's likely that you've hit the core saturation point. But if the current is always excessive, and you get a pretty straight line of current versus voltage, then the transformer probably has shorted turns (or you are using it at a grossly incorrect frequency). Often shorted turns are also "noisy" in that the current at a fixed input voltage will suddenly change or jump around.

One good thing is that the transformer under load will have slightly lower core magnetization than with no load. But be sure that the load has no DC component! That makes things worse instead of better.

David is now in the Pittsburgh Area, with callsign KF3AB.
He is quite an "interesting" character... Complete with
breaking into Skywarn nets on 2m just to make a call, and
disrupting actual "emergency" weather nets.
I for one, wish you all from New York would have kept him!
Oh, yeah, HE is an AIR TRAFFIC CONTROLLER!
geesh...

I have a question I know someone can answer. I'm a newbie to HAM, and am interested in getting on the air ASAP. I have a need to transmit RF signal approx. 25 miles. What sort of output power would I require, on which band, and what would be a good rig for starters. I'm interested in transmitting voice & packet. The sharing of your knowledge would be greatly appreciated!

Thanks,
David

Hello Tom and Patrick,

Thanks Tom for pointing out the in rush current and chance
of blowing Patricks multimeter if on low ranges.

Patrick if you do not have a variac as Tom suggests, then you
can use a 1 ohm resistor of at least several watts in series with
the primary winding. Then you can use your multimeter on the
AC voltage range to calculate the primary current .
current = voltage measured across the resistor/1ohm.

Put your voltmeter on a high range to start with.

Let us know how you got on.
Remember you are dealing with a lethal supply
no rough lash ups.

Really Ed? Do you happen to have the relevant cite of Someone Vs. USA
where an amateur filed suit against the FCC?

>The only case
>the FCC can make stick now days would be someone slopping over the edge
>of the band or just totally out of band operation.

If these operators are "so bad" (e.g. causing intentional interference
with others, etc., as is claimed by some here) then the 'content' of these
offending users shouldn't even be an issue.

>You of course can prove this unrealistic number to be factual right?
>How bout 10,000 meeting the criteria you claim for the 100. No I have
>no idea either but my figure is just as apt to be right as yours in this
>case.

Errr, no, your figure is one picked out of thin air. We, on the other
hand, are more than capable of counting the number of inbred rednecks on
14.313 and 3850. Even then, all one has to do is visit rram and count
the callsigns of the 'libnet' morons that now consume that newsgroup.

>One, if a filter only kept out 100 over 500000 and also kept out the
>numbers of good people we know of then maybe the cost is too high for
>the return. That is my contention.

There is no evidence to suggest what the number of "good people" (what
defined a "good" person?) are that are 'kept out' is.

>Two, What makes you think what you heard on 27mz was only CBers? You
>obviously have no idea how many of your brother hams hang out down there
>to get away from elitists on the Ham Bands. Yes even HF rated folks.

I'm sure. But, you can easily identify them. They're the ones with the
strong signals, running 100 watt HF radios modified for use on 27mhz.

Gary,

You may want to investigate the Koch method of Morse training. I read a
little about it earlier today, and it seems as though it is very effective.
Check http://www.arrl.org for information on the Koch Morse training method,
and other methods of Morse training.

Cheers,
David

Easy answer.

The ARRL has the same right as you or I to PROPOSE rule changes to any FCC rule.
Unfortunately, their proposals will be given a whole lot more consideration than
those from
individuals or organizations "representing" a smaller membership.

I do agree with your assessment of the direction in which the service is headed!

Gil

3203. Re: How to transmit on police frequencies? Reply to Torres

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-04 00:00:00 UTC
From: wcarc@hotmail.com
Message-ID: <35ef8311.3401889@news.itcanada.com>
Source record: 162738
Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner,alt.ham-radio.vhf-uhf

Well, I guess the question of why comes up.
If you want to transmit on Police frequencies, you first have to know what the frequencies are!.
You then have to get a commercial radio which can cost in excess of 2 thousand dollars. Then find someone to program the radio (good luck :-)).
Even after that, get ready to spend thousands on Lawer fees, and/or Fines, as it is VERY illegal to own a radio that will TX on police bands and even more illegal to do it!

Later

3206. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-04 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6snt93$3l6@news.Hawaii.Edu>
Source record: 162741
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and the contents of such a thread drift further and further away from being "on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

Jeffrey Herman (KH2PZ / KH6)

I must have missed it. Tell us again what the Continuous Wave exam
is all about. When I went before the FCC examiner in 1976 I only
had to pass a written exam and a Morse Code exam. The only continuous
waves that day were on the San Francisco Bay.

Jeff KH2PZ (WA6QIJ back then)

Well, yes...that WOULD be an important consideration.

>You then have to get a commercial radio which can cost in excess of 2
>thousand dollars. Then find someone to program the radio (good luck
>:-)).

That depends. Many smaller cities and rural areas are still using standard 150 or 460 Mhz repeater systems. Amateur equipment for 2m/70cm is easilly modified to cover these frequencies.

>Even after that, get ready to spend thousands on Lawer fees, and/or
>Fines, as it is VERY illegal to own a radio that will TX on police
>bands

Wrong. Possession is very much legal.

>and even more illegal to do it!

Correct. Again, the act of transmitting is illegal. Possession of the radio is not.

Any pointers to actual circuits? I'm able to build based on a circuit
but not quite skilled enough to build based on just a general description
of what to do ;-)

>Of course if your *loads* need 60 Hz (motors, clocks, etc) then this won't
>work....

No problem. I mostly will be running DC "battery eliminators" off it,
plus a few pieces of Ham gear with their own internal AC/DC converters.
How about an old Tektronics O-scope? Would that need 60Hz?

>It may be worth your while to consider rewinding it...

No can do. The actual transformer core and windings are encased
in a sort of plastic/epoxy which fills the entire metal enclosure.
I wouldn't think of trying to exhume it.

Any pointers on that chopper circuit would be greatly appreciated.

Cheers,

Patrick

The ARRL has the right to propose,NCI has the right to
propose, you and I have the right to propose anything, IF we choose to
do so. If they or you want they could even propose nocode notest.
The FCC will then take such action as it deems proper on the matter.
That is the rule of law and the Constitution of the US

>operations? I can understand the radio manufacturers wanting to usher or
>"grandfather" in more Ham operators....this will result in increased sales for
>their already over priced radios.

The grandfathering the ARRL was proposing (and FCC chooses not
to do it seems) affects only hams allready licenced on HF, and so may
well already own those radios.

>I have to wonder about the agenda of the ARRL....do they wish to increase sales

>handed to him/her this hobby will slide even faster down the slippery slope it
>has begun.

No one has proposed a handout license not the ARRL not NCI,
nor me for that matter. The ARRL acted as it did in an effort to
premtively act against what it was widely rumored the FCC was planning
(and may still be planing the NPRM reads like a strangely edited
document to me), which was in their judgement and mine for that matter
about the best way of saving as much of their Code Code uber Aless
attitude as was posible.

>primary and secondary, only stepdown, there may well be another way
>you can hook things up to have them work well, perhaps not even
>requiring a second transformer if the one you have has a split primary.

The transformer is a standard US residential house transformer for
converting the 240VAC line coming into the house to 120VAC (the
kind in a grey metal box that mount outside the house). Beyond that,
I am relatively ignorant. It was already wired up with a cord and
European grounded plug and a metal outlet box with 4 US type grounded
(three prong) outlets. The internals are unknown to me. I wish I
was both more knowlegeable and experienced all around...

I think I'd opt to try the chopper circuit first. So any circuit
diagrams and tips would be very much appreciated.

Thanks,

Patrick

Hello Patrick,

Frequency is not the problem.

Your transformer could be faulty.
When you say "too hot" does that mean" warm" or
" burn your hand" if you left it there.
Warm is OK at no load.
Check the primary current with no load on the secondary.
100mA to 400mA is fine for a big transformer.
If you measure more than 2 amps of magnetising current
then it will feel very hot and is definately faulty.
The transformer should work on 50 or 60 Hz it is
not that critical. American equipment with mains transformers
are sold throughout the world, working happily at 50Hz.

Let us know how you get on with the primary alternating
current measurements, on the 240 volt (AC) side.

As an addendum to my post earlier, I would also like to hear about titles in the categories of memoir, autobiography, autobiographical novel, and "creative non-fiction" (i.e. articles that are heavily personal in point of view). BTW, as a number of replies have commented on the subject of my master's thesis, just thought I should say that radio literature is a large part of the project, but not the whole thing. Academia seems a bit silly, I know. I know of one person who did a doctoral dissertation with the title: "The Semiotic Rhetoric of Bob Dylan's _Blonde On Blonde_, or Para-hermeneutics for the Masses." He he.

>and regularly give their calls.

Well, if it is so cut and dried, why aren't they off the air? Why haven't
the 'big boys' confiscated all their gear? Perhaps because it isn't as
cut and dried as you've made it sound?

>The procodetest mantra clearly states code is a filter so I must be wrong.

You are wrong. There is no perfect sieve. Some 'foreign matter' always
works its way through. Kind of like the parts-per-million of rat feces
that work its way into our processed food supply. There are, at most a
hundred morons on HF. 100 out of 500,000 HF-eligible hams suggests to me
that we have a pretty good filter. All I have to do is tune my HF radio
down to 27MHZ to hear I'm right.

>Please explain your point here, if indeed you have one.

Given the FCC has closed most of their monitoring stations, it would be
really difficult for a monitoring station in VA to monitor Joe Schmuck
in Kentucky who is jamming a 2 meter repeater. On the other hand, it is
fairly easy for that same monitoring station to monitor that same ham on
20M or 75M HF frequencies.

>BTW why didn't you take me up on my offer of the 465 manual,

I wasn't aware you made one. Turns out I didn't need it anyway.

>

Please Mr. Extra Class operator tell you you're not really this stupid. Here let me explain some technical stuff to you. Operator "A" get on and says "blah blah blah" etc. You characterize his transmitter startup. Discrete components make each transmitter just a bit different. You record the "blah blah blah" and voice print it. At some other time the jammer comes on on the same rig with the same voice and voila you have a match. You can also go to the subject operators station and make near field measurments while he is jamming that pretty well ties it up also. You know Robert you really ought to put that key away and learn something about this hobby.

As to someone jamming using KC5EGG why don't you do a little homework
and find out why that is not of any concern to me.

>: Several folks with the equiipment and the smarts have
>: fingerprinted the tranmitter startup and voice printed the
operators.

The Findlay Radio Club will hold its 56th annual HamFest
and Computer Show on Sunday, September 13, 1998 at
the Hancock County Fairgrounds in Findlay, Ohio.
This is the best and biggest Fall season 'fest that we know
of in the Northwest Ohio area. We hope you can make it.

Check http://www.bright.net/~kanga/w8ft/hamfest.html for
details, or if you don't have web access contact hamfest
chairman Dave Hoxworth at 419-423-5792, or as a last
resort you may contact me.

Dear "Real",

You can't even send good code at a measly 12WPM! Go back and practice
awhile, then find the error in the 4th line.

..
: >Of course at 1kHz, you might be getting into the area of too high a freq
: >for the core. Also...commutating SCRs can get tricky; IGBTs these days
: >probaby would make a lot more sense. 240 volts at 1500 watts is only
: >about 6 amps, which should be very easy for IGBTs... but read on...

: Can you elaborate on the IGBT's (I'm quite out of my depth here...).
: Perhaps a circuit diagram is available somewhere...?

IGBT's are "insulated gate bipolar transistors," kind of a cross between a power MOSFET and a bipolar power transistor. They are fairly inexpensive, and can handle a lot of power, especially in the few-hundred-volt range.

The basic idea: bridge-rectify and filter your line voltage directly from the line into big capacitors. That gives you something like 340 volts DC. Then use an "H-bridge" arrangement to drive the transformer primary. The H-bridge consists of a switch (i.e., IGBT) from each end of the transformer primary to each side of the power supply DC voltage. So the four switches are connected like this:

switch connects between
A trans. 1 and +340V
B trans. 1 and common (- side of 340V)
C trans. 2 and +340V
D trans. 2 and common (- side of 340V)

Then, cycling at 60 times a second, you turn on switches A and D for some milliseconds, turn off switches A and D for a short time, turn on switches B and C for some milliseconds, turn off switches B and C. The "on" time for A,D is the same as the "on" time for B,C. And the two "everybody off" times are also equal. You can adjust the total "on" time percentage so that the output waveform has the same RMS value as a sinewave of the voltage you want, and the peak value is nearly the same as well.

But ... warning!!! ... in practice, you're dealing with a lot of power here, and you need to be careful about things like inductive kickback when you turn off the current in the transformer winding. At least a start is to parallel each switch with a fast-recovery diode, anodes toward common and cathodes toward +340. And you must use switches--IGBTs--that are rated at plenty high enough a voltage...I'd probably opt for 600V parts. Then you

are faced with driving the gates of the switches, which requires
some circuit that can follow the 340-volt excursions of the upper
transistors. It's not a trivial exercise.

: >An alternative is to supplement it with a small transformer or two.
: >If you can come up with a 50Hz transformer with a 30V 6A and a 15V
: >12A secondary, and 240V primary, you can hook the primary to
: >your line, then connect the 30V secondary in series with the primary
: >side and the 15V secondary in series with the secondary side of your
: >big transformer, all properly phased, so you get 240V-30V = 210V into
: >the big guy, and 105V out of the big guy, plus the 15V from the
: >little guy, for 120V output. If you don't need isolation between
: >primary and secondary, only stepdown, there may well be another way
: >you can hook things up to have them work well, perhaps not even
: >requiring a second transformer if the one you have has a split primary.

: The transformer is a standard US residential house transformer for
: converting the 240VAC line coming into the house to 120VAC (the
: kind in a grey metal box that mount outside the house). Beyond that,
: I am relatively ignorant. It was already wired up with a cord and
: European grounded plug and a metal outlet box with 4 US type grounded
: (three prong) outlets. The internals are unknown to me. I wish I
: was both more knowlegeable and experienced all around...

: I think I'd opt to try the chopper circuit first. So any circuit
: diagrams and tips would be very much appreciated.

I'd guess the little transformer would be cheaper than the capacitors
you would need in the switched circuit. And wiring it up would be
easier than messing with the switched thing, too. But...you're
welcome to do it either way or not at all, as you wish.

paraphrased from an AP report:

Today North Korea denied that it launched a missile, saying instead that
it successfully fired into orbit its first artificial satellite.

According to the North's official Korean Central News Agency,
the satellite, ``is now transmitting the melody of the immortal
revolutionary hymns `song of General Kim Il Sung' and `Song of
General Kim Jong Il' and the Morse signals `Juche Korea' in
27MHZ.''

comment:
I'm sure that most of the readers of this group as well as the
majority of U.S. Amateurs will support this action to reform the
targeted frequency.

Another newsgroup? Yeah, I believe this subject has come up before, but I like the name: "rec.radio.amateur.moderated" better than anything with "flame" in it. Since I dropped aol I have been able to filter my subscribed groups pretty well, but those still using proxy servers often cannot, and newbies with questions don't yet know who or what to killfile. A lot of kids and people easily offended by profanity and such are interested in Amateur Radio, but there is no family oriented group for them to post their questions on.

Some people actually enjoy flame wars. I don't mind firing a salvo or two myself at selected individuals at times, when I see them being really ignorant. (I don't see it much now, thanks to filtering). The open forum is the place for that. But a group is needed where this stuff isn't posted, and where flame-free help and information is available to any who need it.

In the spirit of fairness to mental midgets who count on r.r.a.m. as a venue for venting their spleen at the world and just general trolling, I think this group should remain an open forum. A moderated group should be a NEW group, not an existing one. If "competition" from a moderated group dries up one or more open groups, then so be it. That just demonstrates general preferences of the users. There will be some crybabies who will be bitter over not having anybody at which to expel their nasty little squirts of bile and rot, but nobody will stop them from trying... on the unmoderated groups. Those who don't like seeing filth and ignorance on UseNet can go too the moderated group and enjoy free interchange of ideas and information in a serious and purposeful environment.

I don't think so. I've used power transformers as high power audio
transformers for years. They roll off above about 10 kHz due to
parasitic capacitance, but they're fine out to 5 kHz or so.

ANNOUNCING THE "UNIVERSITY OF PROPAGATION"

A couple of days ago I thought "wouldn't it be nice to have a reflector dedicated solely to HF propagation matters", so I established the "ELayer@egroup.com" reflector. I invited several hundred hams to join.

Within hours I found out that another propagation reflector, "prop@lyris.digimark.net" has existed for sometime. This made me feel a bit foolish, having set up a duplicate service which need not exist.

This morning, however, ELayer has nearly 200 subscribers (in just 48 hours) from around the world (W/K, VE, G, JA, DL, CT, BV, BY, OH, YV, PY, SU, PA, XE, HB, VK, DL, EA, and some others I can't determine). Clearly the idea of "ELayer" has some interest, and maybe I should not shut it down.

So what to do? Yesterday I asked the subscribers of "ELayer" for their opinion. Many have responded, and all said "keep ELayer in operation". The general tone of the responses was that there is a place for a new reflector with an "educational" focus, and not so much toward day-to-day developments, an area already well served by "prop@lyris.digimark.net".

Fortunately, our initial list of subscribers contains more than one genuine "world class" propagation guru. A couple of them have volunteered to be "visiting professors", and I hereby accept their services! We have inadvertently created an environment ready-made for "Propagation 101, 201, and 301".

Accordingly, "ELayer" will remain in operation, and I will try to steer it in an educational direction. We will not try to duplicate the good services of "prop@lyris.digimark.net", but rather fill a different niche.

If this sort of reflector appeals to you, and you can accomodate YADEMR (Yet Another Darn E Mail Reflector) on your mail list, you will find a subscription form on my web site at:

Message-ID: <35F02467.2A98AFB@cpmx.saic.com>
Source record: 162784

I just found this news article on another newsgroup. Thought it might be interesting/useful.

Pyongyang, September 4 (KCNA) -- The Korean Central News Agency Broadcast
a report today over the successful launch of the first artificial satellite in the DPRK. The report says: Our scientists and technicians have succeeded in launching the first artificial satellite aboard a multi-stage rocket into orbit. The rocket was launched in the direction of 86 degrees at a launching station in Musudan-ri, Hwadae county, North

Hamgyong Province at 12:07 August 31, Juche 87 (1998) and correctly put the satellite into orbit at 12 hours 11 minutes 53 seconds in four minutes 53 seconds. The rocket is of three stages. The first stage was separated from the rocket 95 seconds after the launch and fell on the open waters of the East Sea of Korea 253 km off the launching station, that is 40 degrees 51 minutes north latitude 139 degrees 40 minutes east

longitude. The second stage opened the capsule in 144 seconds, separated

itself from the rocket in 266 seconds and fell on the open waters of the

pacific 1,646 km off from the launching station, that is 40 degrees 13 minutes north latitude 149 degrees 07 minutes east longitude. The third stage put the satellite into orbit 27 seconds after the separation of the
second stage. The satellite is running along the oval orbit 218.82 km in

the nearest distance from the earth and 6,978.2 km in the farthest distance. Its period is 165 minutes 6 seconds.
The satellite is equipped with necessary sounding instruments. It will contribute to promoting scientific research for peaceful use of outer space. It is also instrumental in confirming the calculation basis for the launch of practical satellites in the future. The satellite is now transmitting the melody of the immortal revolutionary hymns "Song of General Kim Il Sung" and "Song of General Kim Jong Il" and the morse signals "Juche Korea" in 27 mhz. The rocket and satellite which our scientists and technicians correctly put into orbit at one launch are a fruition of our wisdom and technology 100 percent. The successful launch

of the first artificial satellite in the DPRK greatly encourages the Korean people in the efforts to build a powerful socialist state under the wise leadership of General Secretary Kim Jong Il.

This is correct, well written material and tests could perform as an adequate filter and thereby insure well-run bands well into the future. The filtering function performed by CW needs to be taken up by some other means possibly demonstration of proper (safe) station operation since that is what the license is for. When you pass your driving test they don't make you crank the engine to start it!

Hi, does anyone know how the "standard" issue
Tandy Clone / Uniden scanners (early) can be modified to
Rx below the 406.000 Mhz barrier ?

Any relevant info would be appreciated, I already found the
29-54 OR 64-88 Mhz mod, c;lip lead and a lot of guts, and
there it was !

Have checked most of the Web-sites under "Mods .. " etc etc.
but no go.

If not I need a simple converter circuit to shift 400-405Mhz up or
down into what this scanner WILL cover.

(For tracking Met' Balloons - in case you wondered).

Thanks - hear from YOU soon.

Glen - VK5ZCF (yes from Australia).

I have said it before and I will say it again... the code test is a filter, but not a very good one. It works... sort of. The real filter is not testing, but USING CW. Compare the content of the average CW ragchew with the average phone session. The CW OPERATOR is by and large a considerate, respectful, and skilled operator. Just learning to pass the test does not a good op make. He has to learn good habits. These can be learned operating fone if one truly wants to be a good operator, but they are forced upon the CW operator due to the unique characteristics of the mode. Compliance is a matter of course.

Where Morse testing helps the most is ensuring that the new ham or new upgrader has the pre-requisite skill necessary to get started learning PRACTICAL CW operations. Conversational CW typically has ZERO profanity, ZERO weird sound effects, ZERO insulting diatribes, ZERO rudeness, and lots of just plain old politeness. The ham who has passed a Morse Code exam, at whatever speed, is more likely to try using the mode on the air than the op who has not passed the test.

Doubters, give it a try. Listen to the low ends. If you can't copy by ear, let your computer do the hard stuff for you. You will be surprised how well a really good setup can copy even hand sent Morse Code at times. Stop listening as soon as you copy the "F" word off the air. I bet you will listen a long time.

Well I don't want this to turn into another post that properly should be posted only to policy, so that's all I got to say about that.

it,
>right?
>

One of your more stupid statements of the week. In fact it's stupid
twice. As an exercise for the student why don't you figure out why.

The guys who are doing most of the jamming are proud of their behavior
and regularly give their calls. The procodetest mantra clearly states
code is a filter so I must be wrong. It's done Mike stick a fork in it.
I'd love to lambast you further but I have something to do in the best
interests of amateur radio. Obviously nothing of interest to you.

Grow up

Please explain your point here, if indeed you have one. Or are you just
taking a shot at me because I won't supplicate to the "Great God
Morse". BTW why didn't you take me up on my offer of the 465 manual,
dislike my position on code so much you woud cut off your nose to spite
your face? Most impressive Mike.

And how Mr. Wideman, would you know what I sound like on the air? But sure, if you want an article that explains how "idiotic" I sound on the air ... just write one. I will be more than willing to submit it. Like I said before, I am always looking for people to contribute to the site.

So, Mr. Wideman, sharpen up those English skills of yours and compose a nice, elegant article. You will be famous. Imagine all of those people reading your work. It should make your ego expand beyond the confines of this little newsgroup.

Cecil, you can't see that you have completely lost site of the
CONTEXT
which is amateur radio communications, not electrical
engineeering.
It would bother me not the least to have an codeless path within
ARS
for people such as your friend, I'm sure he knows far more about
ELECTRICAL ENGINEERING than I ever could. But---I'll put him to
the test on the subject of COMMUNICATIONS, including morse code
communications. That's the difference. He had shown no such
communications qualaifications-even though he may posses them.
If a waiver took care of part of that, I sure have no problem
with it.
Maybe there should be an Engineer's Waiver-naw, that wouldn't be
"fair".

With a 5wpm General test in a ARS where Extra's exclusive
privileges are
a small slice of CW at the bottom of the HF bands, he shouldn't
care either.

HUSH Ed!!!!! You'll have all those Extras coming to CB in hoards! We
probably won't notice them tho. I don't think even CW/Morse can get
through those 10kw+ rigs.

Dick, IMHO, electronic experimentation has a magnitude more to do with amateur radio than Morse code. One doesn't have to have a EE degree to do electronic engineering. Electronic experimentation can advance the amateur radio "art". The Morse code requirement actually retards the advancement of the amateur radio "art".

In terms of how much you get for how much of an upgrade, the General class ticket is the real bargain. In one jump in license class, the ham gets an incredible expansion of priveleges. The General gets priveleges on the biggest portion or the whole deal on EVERY amateur band, including the coveted (not by me) 20M phone band. He can run full legal power. The Advanced gets another 25 kHz here and there for passing another written element. The Extra gets a few more 25 kHz slices for passing another written AND the 20 WPM code test, and so delivers the least bang for the buck.

That is not to say there are no reasons at all for upgrading to Extra.

How about pride of accomplishment? Granted, for some getting the Extra class ticket is a no-brainer, but for many others it represents a lot of hard work. Also, the low ends reserved for Extras are where all the high speed CW takes place, and for DXers, a lot of serious DX. Also, it is kinda nice not to have to remember all the sub-bands where you have no priveleges, cause you got 'em all. It is very handy for VE's, too, since with any lesser class of license, you cannot adminsiter all exam elements.

If it is no biggie, sure, don't bother. No sense doing the work for something that isn't important to you. But a lot of hams take some pride in having earned the highest class of Amateur Radio license issued in the U.S., and many more are working hard trying to achieve that goal. Personally, my only disappointment is that there is not a higher class of ham ticket to aspire to.

Ham Radio in Japan - Success.

I just went back to my home for my vacation and came back... well... about two weeks after the vacation though.

Well... the repeaters are set up very well. Every 2 km or so... even more... there are repeaters. The most handheld sold in Japan are a couple of hundred watt rigs... (i.e. two AA batteries) and believe or not... you can bring up tens of repeaters with it... Well... the repeaters are in 440, 1.2 and 2.4. 1.2 Ghz has been one of the most busiest freqs in Japan while no-coders can use HFs instead of VHF and above.

Learn something... Here... ham radio is dying and there... ham radio is improving.

Now... coders will follow up my articles and say no code = no ham. HEEEEEEE........

Guilty conscience, Vietnam Dan? I didn't "say it", I simply stated that IF If someone loaned me money to go see my ill mother and I spent it on a HAM RADIO instead, I wouldn't have the nerve to show my face in public.

And regardless of where the money came from, who would spend $3800 on a HAM RADIO? Sheesh, get a life!

Gotta make you happy as an American taxpayer...this guy sucks off the public teat to the tune of $24,000/year and spends $3800 on a freakin' ham radio! Do you get it now, Vietnam Dan? Do you understand now why people like myself...people who don't even know you personally...cannot stand you and your mooching ways?

> Now that is libelous.

How so? Are you not barely holding a minimum-wage, low-level/class job as a bread truck driver? Hey, it's such a success story, flunky. You don't even have a high school education. And you, a thrice-convicted drug dealer, were so stupid to sell crack to a sheriff's daughter. You have no room to cast aspersions about anybody else, imbecile. I noticed you dodged the GMAC issue. First, you say I work there, and threaten to have me fired, now you say I don't work there. Which is it, psychopathic liar?

> I wonder how you will afford an attorney without a job?

Funny, I just received a raise. They commended my efforts to boost office morale by passing around your inane babblings. Even customers were amused by your sophmoric whines.

>Go get spanked some more.faggot.

Hell, Dimbulb, I haven't gotten spanked the _first_time. And the homo lame as well. Well, prove I am, "Perry Mason." You are incapable of doing anything except at the base level, O' Brainless. A loser who lives in a condemned house, with some fat, ugly, hermaprodite with terminal herpes and god knows what else. No wonder you live in the Atlanta area. The CDC must be watching the both of you as an public safety experiment. Tell us about your prison days, Dimmy!

Give it up, you loser. Nothing you can do - nothing you can say - will
EVER be able to cause me to try to avoid you; your cries of "He's spamming!"
are nothing more than you trying to hide the knowledge that you are, indeed,
less than nothing. You are like a mosquito; at the VERY worst, a mild
annoyance - but oh-so-easily slapped down...

I know, Drew, your moonshine addled, oxygen-starved, genome-mutated brain _cell_tricks you into thinking you are doing something interesting here. Nothing could be further from the truth. Now go back to cleaning rest rooms and shouting "Y'all come back now, y'hear?" to the customers.
It's so much fun lashing the boil-encrusted shindles of a slobbering sub-moron like you.

With his autographed picture of RuPaul looking on,
<6srs1e$84a@news.voyager.net>, "Daniel Hicks, Jr." <w8mmq@juno.com> writes:

>And how Mr. Wideman,

Oh, a name lame, whatever shall I do? Some people leave a mark as a record, but _you_leave a blot, a dirty, discolored blemish to document your undistinquished sojourn among your _betters_.

>would you know what I sound like on the air? But sure,
>if you want an article that explains how "idiotic" I sound on the air ...
>just write one. I will be more than willing to submit it. Like I said
>before, I am always looking for people to contribute to the site.

You seem to have an oversized ego mixed with an undersized talent. Why would I want to contribute to a undistinquishable, functional illiterate's pathetic web site? I told you, I don't tip the drooling, homeless urchin trying to hawk stolen merchandise on the street.

>So, Mr. Wideman, sharpen up those English skills of yours and compose a
>nice, elegant article. You will be famous. Imagine all of those people
>reading your work. It should make your ego expand beyond the confines of
>this little newsgroup.

First, and most satisfying of all, my little pet cbrambutt had thought that a flood of
messages across my bow might work in favor of his minuscule talent after he realized that he couldn't shine my shoes, let alone answer an incisive and proficient posting from me. He tried his best, slaving away for hours after school let out, and even overslept the next morning (boy! was mom ever mad!).

But all this effort went for nigh as Daniel Hicks aka Junior, not missing a beat, continues to remind us of his status as a sub-human is _each_ and _every_ insipid post.

>Dan/W8MMQ
>w8mmq@juno.com

There are times when you need the touch of a llahma, no?

The stumpjumpers are the only radio club where all members hold the office of villiage idiot. Besides, it's fun to see them chase their tail.
I'd rather talk about antennas, though.

Like my dipole for instance. I have one leg of it oriented 120 degrees, and I receive well from Europe and the Northeast/southwest from it. The other leg goes part of the way at 320 degrees and zigzags to 180 degrees to fit my property. Even though I'm in a valley, sort of, I can pick up fairly well. The height is 30 feet as an average.

SB QST @ ARL $ARLB069
ARLB069 Question pool changes put on hold

ZCZC AG69
QST de W1AW
ARRL Bulletin 69 ARLB069
From ARRL Headquarters
Newington CT September 5, 1998
To all radio amateurs

SB QST ARL ARLB069
ARLB069 Question pool changes put on hold

Citing ''almost certain and imminent restructuring of licensing,'' the Question Pool Committee--the group that formulates the questions that show up on Amateur Radio examinations--has put further changes to the question pool on hold until restructuring issues are settled.

ARRL/VEC Manager Bart Jahnke, W9JJ, says the decision includes postponing the Advanced class question pool update, scheduled for revision and release this year for implementation next July 1.

The Committee says restructuring could cause anything from making a few rules questions unusable to ''total deletion of one or more question pools or even combination of two or more of the present question pools into a differently configured question pool.''

The decision to put further revisions to the question pool on hold had majority support of the National Conference of VECs. The QPC will postpone its current question pool review schedule ''until the direction of such restructuring is more certain,'' QPC Chairman Ray Adams, W4CPA, said in a statement.

Adams said the QPC would announce when it's decided to resume alterations to the question pools. ''The action required by that decision could range from a simple resumption of rewriting of the question pools much in the same manner as we have in the past to issuing any necessary supplements containing the changes to each of the question pools in use to combining certain pools in whatever manner may be dictated by the Commission,'' he said.

Just about any HT with 12V and a decent antenna will do the trick if there are no hills or tall buildings in the way. A brick type amplifier is a cost effective and versatile tool to icrease your power to 50 or 100 or even more watts for enough extra punch to make a big difference. You want your antenna up as high as possible... for true line of sight path over level ground or over water with no obstructions, the combined height of the antennas at both stations must equal about 346 feet. Luckily, radio waves do not exactly follow the rules. A reasonably strong signal will actually bend to follow the curvature of the earth to a degree. You should be able to make contact fairly well with both antennas up around 30 or 40 feet, assuming good antennas. You could try hitting a local repeater for short contacts, but remember others will be using the repeater too, so try not to tie it up during peak traffic hours.

If you have an HF license, you should be able to work the other station just fine on the low bands. Review the material you had to study for your license. I am assuming you are either Novice, Tech, or Tech Plus, so figure on working CW on HF. 80 meters will be open for groundwave propogation over such a short path anytime. During the day there will be practically no skywave propogation and so no traffic, and so a sked will be easy to keep.

BTW, what is your call?

It's a pity you had to look the word up in a dictionary, Mark. I recall
encountering it on a grade-school spelling test.

In any technical field (e.g., amateur radio), definitions are of vital
importance. Slang and street-talk have no place and use of such label one
as not having any depth in the field.

Source record: 162659

By all means feel free to have your attorney send me a letter such as was sent to your nemesis. Your attorney charges big bucks per hour...I figure that if he sends me a "letter" from you, it will cost you a minimum of $50 and probably more for his time.....you can ill afford it. You'd better get new glass in your car windows first.....it is gonna be a cold and wet winter. Fix your cars first and worry about having your attorney contact me later.
If you feel that I am worth such a high dollar letter, please go right ahead and do it! It will be money out of your pocket and will not cost me a cent!
In the meantime I will send your atty. a copy of the libelous statements you made about me on your now defunct web page. I think he should know about your past activities and statements about many of us Hams.....smart money says you have only told him a one-sided story here but he will soon be finding out the rest of the story.

Well , not sure about the ITU, but reading from my private pilot ground school manual it say's the pilots initial callup should be mayday,mayday,mayday, if he is in distress. If he is not in immediate distress or is uncertain he should preface his message with pan,pan,pan. Also would set transponder to 7700. I AM replying to this thread from the amateur radio ng. But on this one I'm gonna trim the cross overs down. MK

Hey everyone, I've just figured out Drew's problem (s). He isn't
stupid or ignorant. He just cant read. No matter whay you say to
him his response is the same. Or maybe he is a rock after all. What
do you folk's think? Is Drew really a rock named rearguard?

In the days before the feds, amateurs managed to make a hash of broadcast
reception. That's one of the main reasons we have the feds involved today. If an
interfering signal is down only 10 db from the broadcast signal, the broadcast
receiver only has a SNR of 10 db. While hams may put up with that, broadcast
audiences won't. And since amateurs represent a dispersed source, their
signals are often stronger than the broadcast signal at a given location regardless
of whether they are running broadcast power levels or not. You should know that,
Ed, from your work on RFI.

East Coast hams were making Radio Moscow move off frequency forty years ago with pairs of
250THs.
No big trick.

Raw power means absolutely nothing unless you (roughly) spend the same bucks on the
antenna. Hams
normally don't even start to have the broadcasters investments in antennas.

Cecil this is the most lame statement you have made yet. The reason that the exams are so dumbed down is simply because our government in it's infinite wisdom chose to abandon real responsiblity for testing in favor of a farce which they can point to and claim that all hams have been adequately tested, knowing full well it is not true. Abandoment of responsibility. No other reason.

Source record: 162684

I bought a "adms-1d" software with serial cable (Version 1.04 I believe), and the instructions kept talking about a "second" cable to "adapt" the serial cable for the VX 1-R Receiver. The cable that I received was simply a db9 to "Stereo" mini plug. (IE: 3 conductors, tip-ring-sleeve.) No other cables. nothing with 4 conductors (Tip-ring-ring-sleeve) or anything.

Is this correct? Is the cable suppose to only be a 3 conductor cable? Or am I missing a crucial part?

I would appreciate if you could get back to me and let me know if I need to obtain a 3 conductor mini to 4 conductor mini or something like that?

P.S. If I have the VX 1-R receiver with Firmware version A106, will your software, or any other software open up the 800MHz frequencies?

Also, Does anyone know if you can open up the 42.00-43.00 MHz frequencies for recieve? I noticed that the unit starts higher than that, and I would like to be able to hear the 42-43 MHz freqs!

I really appreciate any help on these subjects...

Sincerely,

Steve Ross

Except in the military, there is something strangely un-American
about putting forth hard work and sweat and getting nothing of
value in return. The extra class privileges offer nothing of
value to me - why should I lift a finger to be an extra?
If only extras were allowed on the WARC bands, I'd be one in
a minute.

America is a pro-capitalist economy. Capitalists believe in
Return On Investment. There is next to zero ROI for any effort
on my part to become an extra class licensee. Besides, I don't
want to expose myself to the delusions of grandeur with which
so many extras have become infected.

> Cecil this is the most lame statement you have made yet.

No it isn't. :-) I've made it many times before. Dick, take off you blinders and consider just how dumbed down it automatically makes the ARS when the Morse code skill test is given equal importance to all other tested aspects of ham radio combined. Morse code skill is primary for HF access. The written tests are predictably just an afterthought for rabid procoders. You guys look down your nose at my tech friend Tom, N7SZP, with a PhD in EE. That's the result of the dumbing down of the ARS. You guys are so dumb you don't realize just how dumb you are. Morse code is more important to making a good HF ham than a PhD degree in EE? Give me an everloving break!

Get your act in gear, tubby. I am still awaiting the much feared missive from your vaunted attorney! If you must make threats, at least have the testicles needed to follow through with them!!
Pehaps the term "testicles" has thrown you for a loop....ask your attorney what that word means!

You make like I'm suppossed to be ashamed of being a service connected
combat veteran. Well I'm not. I have no problem at all looking myself
in the mirror. I am not ashamed of one damn thing. I am proud of having
the balls to go into the military, and not run off to Canada or Sweden,
or college for the sole purpose of avoiding military service. Like our
lovely president did. So, no matter what you say, it is irelevant. When
you walk in the shoes of one of us, then you may have something to say.
But since you haven't, and never will, you can take your opinion's and
shove them up ur backside.

>geoplus account?) and ^_^

Neuron, you are as poor at trolling as you are at flaming. Your
Average Bob flames thus far have been far too contrived for any
sentient person not too notice your in-built hatred of certain people
who have posted here.over the past few years.

It's plainly obvious that you had some kind of thing against Roger
Wiseman. I've been on alt.flame for nearly a year now and I never saw
a single post from him. Why on earth would some newbie hate someone he
has never met? I guess you'll say you read it on some web page, but
that poor excuse won't wash with me. "I" know you better than that,
"I" know you hate Roger because he kicked your sorry behind up and
down the flame pits for quite some time.

Then there was the Palmer thing. Palmer hasn't been around for quite
some time, apparently he was spanked off Usenet by Roger Williams.
Probably a good thing, my modem is on it's last legs and can't take
much more hammer. I do hope Roger comes through with some proof of
Palmer's spank, I'd really like to read what he wrote. We all know
you've hated Palmer for years, again, he's another one who has kicked
your sorry arse up and down alt.flame when the mood takes him.

The there was poor little Xixlezit, what on earth has he done to Average Bob? He hasn't harmed anyone in alt.flame, except for a war with you some time back. You got tired of being trolled by him and unsuccessfully dumped the guy amid many posts proclaiming "I'm not flaming you any more" or some such rubbish. I kinda like xixlezit. He got a heads up from me a while back. He's known it's you for quite sometime also. I was let this run a little longer, but I'm just an impatient soul. I can't resist humiliating you.

Then there is HFW. Your hatred of us is legendary. We've beat you up badly plenty of times. You've made an ass of yourself many a time in front of us. The now famous "It was a typo and I meant to spell it wrong" stuff was just hilarious. I still laugh about it now.

Oddly enough, your present web page includes all of the above people with the obligatory derogatory comments. Strange that?

Then there were the two posts I sent your way. I dropped some large hints that I knew it was you hiding behind that address. You didn't even dare answer them for fear of giving the game away. The thing is, you still went right ahead and post a couple of bogus SPANK claims on BDZ and Cuch. Silly move, you must have known I pursue you further.

Then there is your spelling. I see you found a spell checker this time. I'm quite glad you took a little of my advice. It made it a little harder to spot you, all of an extra day. But your appalling spelling shines through like a lighthouse in the fog.

Your headers gave away another clue. MST3K was a group you invaded in October / November (?) last year.

A few things in your posts made me look twice. You mentioned Neuron quite a bit in them. bad move. Why is a newbie concerned with someone who hasn't posted here for quite sometime? You also mentioned quite a bit of his material in your recent threads. Again, you could have read it off web sites and Dejanews, but "I" know you better than that. You just can't resist having a sly dig at people who have flamed you so much that you just had to take a different alias. You even went so far as to TELL us you'd be coming back under an alias, silly boy.

It's good to see that you've at last admitted your links with the nosers. I knew you were never an independent and called you on it several times. Why don't you and Thacker restart the DMV and give us someone to flame? This HFW UIP is getting a little boring now.

The good people in alt.fan.backstreet,boys can take a look at your record. Checkout neuron96@ix.netcom.com at Dejanews for the full history of this poster. He's known for trolling certain groups.

Neuron, don't even try and deny it. I "know" it's you. You're too bleeding obvious.

Oh, incase you missed it last time...

SPANK, again.

Thanks. I'll take it to an electrician and have him
re-check the connections. I didn't set up the transformer,
which was already wired up with a European plug and US
receptical -- but it very well could be wired wrong.

Thanks for the tips.

Patrick

> shove them up ur backside.

Your past military service is irelevant to your present situation. Yes, Vietnam Dan, I commend you for having the courage to stay and fight for our nation. This war was a useless, politically-motivated situation which we should have never been involved in...but that has no bearing on the fact that you served your time and did your duty. Again, I commend you for this.

I also have no problem with you personally. I have never met you, nor have I ever spoken to you or with you on amateur radio.

What I and others of like mind on here have a problem with, though, is that you appear quite capable of holding down a job and supporting yourself...yet you choose not to. I've read literally hundreds of your posts. They are well written and articulate. Certainly, you would be able to hold down any one of a number of available jobs where you would be doing a duty similar to what you do for several hours a day here on USENET: typing information into a personal computer. You appear to be sharp and intelligent; I'm sure you could easilly move into a more advanced position within a short period of time. If you were truly disabled and not capable of being employed because of your service-related disabilities, I would have no problem with you collecting a government check every month. I support those who have become injured while fighting for the interests of our country. But from what I have seen of your abilities firsthand, you are quite capable of becoming self-sufficient yet choose not to do so. It's not a matter of whether or not you are legally entitled to the money and are legally classified as "disabled"; obviously you are, and these are not points of contention. Rather, it is that you could become a self-supporting member of society and yet you choose to accept a government stipend each month in lieu of working for a paycheck. Make sense?

Clearly Japanese battery technology has surpassed the United States, even with a Nickle Hydryde battery I can only get a couple watts from two of them, not like the couple hundred watts they're getting in Japan. Are they having any problems with RF heating of brain tissue while running these couple hundred watt HT's?

>Well... the
> repeaters are in 440, 1.2 and 2.4. 1.2 Ghz has been one of the most

If 1.2 GHz is the busiest band what difference does it make whether they have no code HF access, our license structure in the US permits no code operation on all the bands you listed above, does not appear to me that HF has anything to do with it. Although I'm sure your twisted thought patterns will make some rationalization for it.

To quote Oris:

My recon vehicle just returned, and the mission was successful.
James O'Brien
3910 Hiram-Sudie Road
Hiram GA 30141
Said dwelling appears to be an old one story farm house with very faded red paint. The dwelling appears to have been the victim of a highway widening project several years ago, as it now sits approximately six feet from a very busy two-lane highway. Residents of this dwelling apparently enjoy the sounds of heavy traffic, day and night. Two very long and deep skid marks were observed in front of the dwelling, as if someone left or arrived in a hurry. There is no garage, only a rusty carport shelter. Antennas of every description are on and around the house, verticals, long-wires, etc. At least two antennas appear to have been pulled up in trees by means of rope, where they swing in the wind. A DBS dish was in the back yard. The grounds were very poorly maintained and need of landscaping. Two vehicles were in the rusty carport, one red Ford T-bird and one black T-bird. The black T-bird has a busted out passenger window. Both vehicles appeared to be in poor condition.

I am selling a MOTOROLA GP-68 UHF 20 Channel Keypad Programmable HT.
Covers 430-470 MHz. This radio is like new. Original box, manual and
accessories. Also Includes a desktop rapid charger, two 1100 mAH battery packs
and a leather case with a swivel type clip. As I said, this is all like new.

Here are some of the features on the radio:
-Keypad/ Field Programmable
-20 Channel & Scan
-PL/DPL
-5w/1w Selectable Power Settings
-Receive signal strength indicator
-VFO
-Frequency Coverage 430-470 MHz
-DTMF Keypad and memories for phone patch
-Has more......
Selling all for $280 (Includes Shipping & Handling)
Will only accept PrePayment in the form of a Postal Money Order.

jcrighton@sia.net.au (John Crighton) writes:
>The transformer should work on 50 or 60 Hz it is
>not that critical. American equipment with mains transformers
>are sold throughout the world, working happily at 50Hz.

A transformer needs 20% more iron in the core to avoid saturation at 50 Hz than it does at 60 Hz with the same number of winding turns at the same voltage. If the transformer *has* a sufficient core size, it will work at both frequencies just fine. But if it's built for 60 Hz operation only, the core will saturate on 50 Hz and the no-load current will be much higher than it should be.

Much equipment is built with transformers built for 50 Hz, and with parallel/series primary windings that can be connected for 120/240 V in. But it sounds like this particular transformer is designed for 60 Hz only.

Is there somthing similar between K5BLB and KC8JBO? Find out for yourself!

Taken from Liberty Net Support Page:

K5BLB is best known as Sidney Mahan of Estancia, New Mexico. K5 Big Losing Bozo. Sidney is known as an individual on frequency who has serious problems. Jamming the frequency is his forte because he has such a dispicable life and nothing better to do.

Roger has nothing else better to do than to Jam this NG!

Sidney Mahan is well known for his obsession concerning faggots and queers. He seems to have a fetish or some sort of psychological obsession with these deranged individuals. Every night that he gets on the frequency and adjacent frequencies, he refers to everyone by calling the faggots and queers even though they are not. Sidney does this for every hour of the day that he is on the frequency. He constantly sits there and says "Them faggots." Constantly, he does this and it shows that he has an obsession with these unbalanced individuals.

Roger also has an obsession with faggots and queers. Calling people faggots, talking about blow jobs and etc.

Sidney's favorite saying is "Moan, faggots, moan" he says in that deepthroated Texas voice of his. Another of Sidney's items to talk about refers to making terroristic threats over amateur radio. It was taped and played over and over about Sidney's threat the the President of the United States should be shot for desertion because of his draft status.

SB DX @ WW $OPDX.373
Ohio/Penn DX Bulletin No. 373

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 373
BID: $OPDX.373
September 7, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster WB2RAJ/WB2YQH & The 59(9) DXReport, KF2TI, K4DX, WD4NGB, W5ZPA, KH7RS, K7WX, K8AL, WD8MGQ, CE6TBN, DJ5AV & DX News Letter, DL7IO, EA3NY, EA5GRC, G4BUE & DX News Sheet, HB9AMO, JA1ELY, JI3ERV, JO1CRA, ZP5AZL and ZS5BBO for the following DX information.

5V7A WEB SITE. Warren, K7WX, reports that he has finished the code for the 1998 5V7A contest DXpedition Web page. This is the Web site for the West Africa VooDoo Contest group lead by G3SXW. They have had the first place CQ WW CW DX Contest multi-multi score for five out of the last six years. The previous URL (http://www.getnet.com/~k7wx/5v7a.html) is no longer functional. If you have a link to this prior site, now may be a good time to update it to the current URL: http://voodudes.com/
This new site is a complete re-write and has some interesting features. Check it out!

8Q, MALDIVES (Update). Holger, DL7IO, has informed OPDX with some additional information on the upcoming "Berlin-DX-Group/NODXA" DXpedition to the Maldives, October 18th-November 5th (on the air, Oct.19th-Nov.4th). He reports that 20 people (not 20 Hams) plus kids will travel to 8Q-land. Holger states a couple of the operators are experienced, "but also some are newcomers in the DXpedition business. So, please remember this if the guy is not running a 200 + rate." A complete list of operators/details can be found in last week's, OPDX.372. The group will be taking about 150 kg of aluminum and titanum with them along with 5 transceivers, notebooks and 3 amps (400W). "So it should be possible to get in contact with us", states Holger. They will have 2 V80E (20m high) verticals for 80m and 160m so they can operate on both bands at the same time. They will also be able to run 3 RTTY stations simultaneous. Also, part of their luggage are 2-3 beams (starting at 40m in length), towers (10/15m and smaller) and verticals like a R7 and HF9V. The group now has a 8Q7IQ/8Q7IO DXpedition Web site online at: http://www.qsl.net/8q7io
The log search page has been tested and is working. This will be updated

daily (Of course no logs are in it now). They will also have an active E-mail address at: 8q7io@qsl.net -- Holger will retrieve the mailings until their departure, and than the E-mails will be forwarded to 8Q7 so you will be able to send them your comments, tips, sked-wishes etc... (but please remember that only once a day they will retrieve the messages). The QSL route is, of course, DL7VRO. Cards will be printed after the tour, so it will take about 3 months. PLEASE NOTE THE FOLLOWING: They prefer E-mail request for QSLs. Cards will be go out via bureau. Another important announcment is the new E-mail address for Fritz, DL7VRO: dl7vro@ibm.net By the way, Fritz is QSL Manager for following callsigns and QSL requests via E-mail are "OK" (bureau): 3D2AO/IO/XO, 5V7HR, 9I2A/M/Z, C56/DL7UBA, CT3/DL7UBA, CT3/DL7UTM, EA8/DL7AU, EA8/DL7IO, ED8CMT, FW/Y31XO, FW/Y58IO, H44IO/IQ/XO, SO1HH, SO5OE/1, T21XO, T28IO, T25AO, TN2M, TN4U and YJ0AIO/AIQ.

CY9, SAINT PAUL ISLAND. If the weather permits, look for Duane, WV2B, to sign CY9/WV2B in the middle of the week (September 9-14th). QSL via WV2B.

E3, ERITREA. Bruce, WD4NGB, reports that he has been working on a DXpedition for the last 5 months to Eritrea (E3) for the "Space A DX Group" (Please refer to OPDX.341). Eritrea is number 5 on the ARRL DXCC needed list. In case you do not know, Eritrea has been tied up with a border problem since May 6th with Ethiopia. Bruce was told in April to send a request in writing and they would process it. The border problem has since taken priority for them, of course. Bruce received a fax from Eritrea last week saying that they would be able to complete action on his request on September 16th. He has requested the callsign E31DX. This DX pedition will be by the "Space A DXpedition Group" with a few selected other operators also. They will have 10-12 operators to operate 3 stations 24 hours a day. Bruce states he wants to do this as near to the Fall Equinox as possible, and also allow enough time for the border problem to be resolved or remain stable. Since many of the operators have plans for one or both of the CQWW contests, they will be making their tentative plans for November 3-18th. The group feels that doing this near the Equinox will give them the best world wide coverage on all bands from 160-10 meters and maybe even 6 meters. Bruce says, "Things on the border have been very stable since the first part of June, when the UN and other groups got involved to help with this problem. If the border maintains as is, we should be able to firm up our dates soon. At this time we have 3 operator spots vacant. We are looking for operators that have prior DXpedition experience, with least 300 countries confirmed and with extensive low band experience. Since we do not have any operators from Europe in our group, they will be given preference in the remaining spots." The list of operators at this time are, WD4NGB/Bruce, W4WX/Bill, W6RJ/Bob, W6KR/Rob, JH1AJT/Zorro, XE1CI/Nellie, K5VT/Vince, KO4RR/Joe, and N5VL/Vance. They will have online logs available, with daily updates. They have set up 3 Web sites to make sure that at least one of them will be up at all times:
http://qsl.net/eritrea
http://members.xoom.com/eritrea_

http://members.xoom.com/space_a/eritrea.htm
Donations for "Non operator" expenses can be sent to Bruce Richards, 533 Briarwood Dr, Clarksville Tn. In the event that for any reason this trip does not take place, all funds will be returned. Any large donations by a group or individual will be shown on the QSL cards. At the completion of the DXpedition, all funds received with the QSL cards will be used to defray the cost, not on other trip expenses. Bruce states that they will make another announcement in a couple of weeks as more information becomes available. If you wish to fill one of the remaining spots, contact Bruce at: wd4ngb@m2.sprynet.com

FS, SAINT MARTIN. Eddie, EA3NY, will be FS5PL during the CQWW RTTY Contest, September 26-27th. He will also be on SSB and RTTY before the contest. He will use a FT-900 (and possibly Ameritron Amp) with a A4S Cushcraft antenna (with an add on kit) for 10-15-20-40 meters and a dipole for 80 meters. To setup skeds with Eddy, send E-mail to: ea3ny@bitradio.com for skeds

IOTA NEWS.......
NA-148. Tony/WF1N and Lou/W1DIG (ex KA1DIG) will be on the Isles of Shoals/Appledore Island September 18-21st, starting around 1900z, Friday and ending about 1500z Monday. Operations will be on 40-10 meters (17m possible) on/near the usual IOTA freqs, SSB. QSL direct or bureau via home calls. Any questions, E-mail Tony at: megahertz@webconn.net

AS-024. Operators JR6USF/6, JJ1LIB/6 and JP1LCI/6 will be active from two small islands, Shimiji and Kamiji which belongs Yaeyama Island. Activity will be September 11-12th.

AS-117. JI3DST/3 will active from Awajishima (PM74) next weekend, September 12-14th and then Okunojima (PM64), also AS-117, November 21-23th. Look for him on or around 14260 and 21260 kHz.

J43, GREECE. The "DX News Letter" reports that the Diploma Interests Group (DIG) club station J43DIG has announced that they will be on CW and SSB on the usual DIG frequencies from Septemeber 9-26th. QSL via bureau to DJ8OT or via Eberhard Warnecke, Box 101244, D-42512 Velbert, Germany.

KH2, GUAM. Ramon, WH6ASW/KH2, is a resident on Guam and has been very active. He is active on CW and SSB (maybe more on CW). He likes 17 and 20 meters. He is a Science teacher at a High School and gets on the bands after work. No specific QRNs were reported and none were found on the cluster network. QSL to VK4FW.
Meanwhile, if you were lucky during the past weekend to work AH2R or NH2C, QSL via JI3ERV. Operators were JG3RPL/N1BJ and JI3ERV/NH2C. Their activity was to be on 160-6 meters (especially 160/80m) with operations on SSB/CW/RTTY and activity in the All Asia Contest (PH).

KP2, VIRGIN ISLAND. The "DX News Sheet" reports that Bill/W4WX, Bill/N2WB, Clarence/W4CJK, Chris/VE3FU and Ernie/W5OXA of the Clay County DX

Association (CCDXA) will be active October 19-27th, using their home callsign /WP2, /NP2 or /KP2. During the CQWW SSB Contest, they will use WP2Z from the Windwood contest station. They are currently looking for someone to replace Joe/W4USN, who was part of the team but has had to withdraw after a stroke. If interested, contact Bill, W4WX, at: w4wx@bellsouth.net

LU, SOUTH SHETLAND ISLANDS. "The 59(9) DXReport" states to look for Ricardo, LU1ZI, on Sundays, on 3630 kHz at 0230z from Tenierente Jubany Base. QSL direct to: Base Cientifica Jubany, Correo Argentino El Palomar, Via Base Marambio, 9411 Antartica Argentina.

NEW IOTA. Operators HR1RMG and YN1RFV/YN6 will activate the station H76C between October 6-11th from Cardon Island (group D of Pacific Ocean Islands of Nicaragua) and the expect to receive a new IOTA reference number during the operation. QSL via HR1RMG.

NEW IOTA TO BE ACTIVATED FOR ONLY 24 HOURS. Look for W5BOS/7 to be active and on the air to commemorate the great storm of 1934 when winds of 100 knots and seas covered the entire island including the lighthouse on Tillamook Rock. Lanny, W5BOS, has been granted permission to operate from Tillamook Rock lighthouse (Terrible Tilly, 45.56N 124.01W). This is in the Oregon state group, little letter (a), the last of the unnumbered island groups in the USA. The operation will be for only 24 hours, beginning at approx 2200z on Monday, September 21st. Lanny will be using 100 watts and a small yagi plus a dipole for 40 meters. Suggested frequencies will be: CW - 7030, 14040, 21040, 28040 and SSB - 14260, 21260 and 28460. Lanny will do all that is possible to get the European and South East Asian as well as North and South America IOTA operators in the log. For info and pictures of the island and the lighthouse, check out the WEB site: http://www.worldlights.com
QSL via W5BOS: Lanny Phillips, 8381 FM 2101, Quinlan, Tx.

N1V, NAVASSA DXPEDITION. Dan, K8RF, continues to work and put together a DXpedition to Navassa Island, but the dates are not set yet, however they should be around November or December. The callsign will be N1V. Operators include K8RF, WA4DAN, AA4NC, W4WX, K7BV, DJ9ZB, KG4CQ and three others to be announced when schedule is firmed up.

QSL INFO AND NEWS......
KH0/JH1UUT was active this past weekend from Rota Island (Mariana Island). The operator was JH1UUT (President of JNT DX CLUB). QSL to his CBA.

Mike, W5ZPA, reported to OPDX that he and others have returned from their DXpediton to Ambergris Caye, Belize, and even with the very poor conditions in four days, they made a total of 3,200 QSOs. The island lost power two times while they were there. The QSL routes are as follows: V31YK to W5JYK -- V31KR to K5KR -- V31MP to W5ZPA.

ZS5HAM was active during last weekend's SARL HF Field Day Contest by the Highway Amateur Radio Club operating from Montaseel, about 40km

west of Durban. QSL to : The Highway Amateur Radio Club, P.O. Box 779, New Germany, 3620, South Africa.

ZW40SD was activated this past weekend by the Santos Dumont Air Boy Scout Group 20/PR to comemorative the group's 40th anniversary. QSL via PY5AWB: P. O. Box 6025, Curitiba - Parana, 80011-970 Brasil

SPECIAL EVENT. In celebration of the 200th anniversary of the first pioneer settlement in Guernsey County, Ohio, the Cambridge Amateur Radio Association will operate the special event station W8G on the 19th and 20th of September. QSL via W8VP, Box 1804, Cambridge, Ohio 43725. Suggested frequencies will be:
SSB - 3860, 7260, 14260, 21360 and 28485 kHz
CW - 30 kHz up from band edges.

SOUTH AFRICAN SPECIAL EVENT STATIONS (ZS3 and ZS75 by ZS5BBO)..... ZS75SIG. The "South African Corp Of Signals" will be celebrating their 75th anniversary in November, 1998. Edwin, ZS5BBO has applied and has already been allocated the callsign ZS75SIG. He will be activating this call sign as a special event starting on October 30th through November 30th. He is hoping to be active on the following bands: 80m, 40m, 20m, 15m, and 10m SSB (They will also be activated on CW). A special QSL card will be printed for this event and will ONLY be sent if QSLs are sent direct (NO QSLS via the bureau). Please enclose 1 U.S. greem stamp or 2 IRCs for postage. The QSL information is as follows: Edwin Musto (ZS5BBO), P.O. Box 211032, Bluff, 4036, South Africa.

ZS3MM. Edwin, ZS5BBO, states he will be active from the "City of Diamonds", Kimberley, December 19-24th (possibly the 25th) as ZS3MM in memory of the late Bill Upton (ZS4MM/ZS3MM). Edwin states that Bill was responsible for him becoming a ham. Also, due to a survey Edwin carried out on the InterNet, he has been informed that many stations require ZS3 for various awards. He will be active on 10, 15, 20, 40 and 80 meters SSB ONLY. QSL via ZS5BBO to the above address only. Please enclose 1 U.S. green stamp or 2 IRCs for postage.

TZ, MALI (Update). As reported a couple a weeks ago, Bob, K4RB, is on the air from Bamako as TZ6DX. He will be there for a multi-year assignment and will be active on most bands and modes. He is an avid CW contester. He was heard this past week on 15 meters CW between 1800 and 1930z. His QSL Manager is K4DX (ex-WA4FVT). K4DX is good in 1998 sources only. Any address for WA4FVT since 1973 is still good. Specifically, the address is: Bill Strickland, 355 Segrest Circle, Athens, GA 30605 USA

XR40, CHILE. Look for the special event station XR40TC to be active during all the month of Septemeber to celebrate the 40th anniversary of the Radio Club Temuco. QSL via the buearu or direct to CE6TC: P.O. Box 1234, Temuco, Chile.

YI98, IRAQ (Special Event). Between September 22nd and October 1st, look for the special event callsign, YI98BIF, which will be used to celebrate

the 10th Babylon International Festival. It was mentioned that any ham radio operator is invited to the festival and can visit the ruins of the old Babylon City (2656 BC). OTHER YI NEWS: Pierre, HB9AMO, reports that during his 3 months stay in Iraq, he twice visited the Radio Club of Baghdad, YI1RS, and also met the President of the Iraqi Radio Club, Mr. Anan M. Aswad, YI1DX. He has learn the country has about 30 hams with a YI licence, but the only radio station they are permitted to use is the Radio-Club of Baghdad (from here they can use their own callsign). The station has old equipment with a small 3 band beam and a 40m dipole. The WARC band are permitted to be used, however 80m and 160m are not allowed. They cannot use their Yaesu FT-101E any more because of a broken pair of final amplifier tubes. This makes their activity very low because they have to use an old fixed frequency radio station. If anyone has a pair of 6JS5C tubes or equivalent (6KD6, 6LB6, 6LR6), they could be sent to: Radio Club of Baghdad Iraqi Association for Radio Amateurs, PO BOX 55027, Baghdad, Iraq. Pierre also mentions that the main activity of the radio club station is usually on Friday around 1200-1400z.

ZG2, GIBRALTAR. Start looking for ZB2 stations who MAY use the ZG2 prefix September 5-13th to celebrate Gibraltar's National Day which takes place on September 10th. QSL via their regular ZB2 callsign.

ZP0, PARAGUAY (Prefix Update). Tom, ZP5AZL, reported last week he would be using ZP0Z during the WAE SSB Contest. This has changed! Tom has been informed by the Paraguay licensing authority that ZP0 callsigns will no longer be issued. Look for Tom to use the callsign ZP5Z in the upcoming contest and possibly future contest. QSL W3HNK.

Is that true? A little thought experiment: Supposed a transformer designed for 60 Hz is used at say 10 Hz. Can you imagine how much heat would be generated?

The difference is that 60Hz is 20% different from 50Hz while
60Hz is 600% different from 10Hz.

Now I get it Rog....this guy is a vietcong immigrant from Ho Chi Minh City.
His daddy and mommy got zapped by a U.S.A.F. air strike back in the 60's.
He got away and escaped by samlar. Now he is a green card holder and
pissed at the country that saved his ass. And I am his object of scorn.
I knew I should have tightned up those cooridinates.

Pawnee target this is Chirp 37....Two VC KIA, one in the bush.

Your Mensa membership has just been cancelled, Cec. The percent-decrease from 60 to 50 is 16 2/3 percent. Percent change is always calculated using the original quantity (in this case, 60 Hz) as the base. Decrease / base x 100 gives pct. change.

In a condemned, red, delapidated barn near the highway,
<6sunvpcju1@nnrp1.dejanews.com>, covert628103@my-dejanews.com whisks away the
roaches from his used keyboard and scribbles:

>x-no-reference:yes

Bwhahahahahahahahahahahahahahahahahaha..this is the "computer" student.

>DejaNews says
>
>There are 573 unique messages by kc8jbo@aol.com (KC8JBO)
>
>which means dimwit is eating up so much bandwidth that aol will dump him when
>they figure it out. I'm going to help them figure it out.

Bwhahahahahahahahaha. You're really pathetic, O'Brainless. Not only do you
lack computer skills, your mathematical skills are equal to that of a rock.

573 (messages) divided by 37 (number of days on the Internet) = 15.4 posts per
day. Hardly spamming, you evolutionary dead end. Hey, O'Brainless, I noticed
your family was on AMC this afternoon. They broadcasted "Planet of the Apes."
Now get on the air with that herpes-ridden, truckstop whore you married and
start cursing. Or start threatening to kill somebody, like I heard you do.

> service-related disabilities, I would have no problem with you collecting a

> government check every month.

DO YOU HAVE ANY IDEA WHAT THE VETERAN'S ADMINISTRATION USES TO DETERMINE
DISABILITY RATINGS? I DOUBT IT. AMONG OTHER THINGS IT IS DETERMINED BY
HOW MUCH THE CONDITION (MENTAL OR PHYSICAL, OR BOTH) EFFECTS THE VETERANS
ABILITY TO BE GAINFULLY EMPLOYEED IN HIS FIELD.

I DON'T REALLY KNOW YOUR AGE. BUT I AM WILLING TO BET YOU ARE IN YOU MID
THIRTIES OR EARLY FORTIES. I AM NOW 52. THIS IS CONSIDERED OVER THE HILL
BY MOST SERIOUS EMPLOYEER'S. ADDITIONALLY I HAVE A CHRONIC AND INOPERABLE
BACK CONDITION AND SEVERE NERVE DAMAGE IN NECK, SHOULDER'S AND BOTH LEGS.

NOW HERE IS SOMETHING NEW FOR YOU BOY'S TO LAUGH ABOUT AND HARASS ME WITH..
I HAVE PTSD (POST TRAUMATEC STRESS DISORDER). FYI...THAT IS 60% FOR SERVICE
CONNECTED BACK,LEG, NECK TRAUMA AND 30% PTSD, TO MAKE UP THE REST OF THE
100% IS HYPERTENSION DUE TO CONSTANT, UNRELIEVED CHRONIC PAIN, ALL OF WHICH
IS SERVICE CONNECTED. AND JUST FOR FUN THEY THROUGH IN UNEMPLOYABILITY
DUE TO SERVICE CONNECTED CONDITION(S). ANY FURTHER QUESTIONS??

PART OF THE PROBLEM WITH PTSD, IS ONE'S INABILITY TO GET ALONG IN SOCIAL
SITUATIONS. PARANOIA, SHORT TERM MEMORY LOSS, NIGHT TERROR'S, FLASHBACKS,
ETC. ETC. SO MY MAN, PUT ALL THIS TOGETHER AND DO YOU REALLY THINK ANY
EMPLOYEER WOULD TOUCH ONE OF US WITH A TEN FOOT POLE? I DON'T THINK SO,
AND EITHER WOULD YOU.

I support those who have become injured while
> fighting for the interests of our country. But from what I have seen of your
> abilities firsthand, you are quite capable of becoming self-sufficient yet
> choose not to do so.

FIRSTHAND? WHAT, BECAUSE I CAN STILL TYPE? BECAUSE I SIT HERE AND EXCHANGE
FLAMES WITH YOU? I USED TO BE A TOP NOTCH ELECTRONIC'S TECHNICIAN. SELF
TAUGHT AND DAMN GOOD. I CAN'T DO IT ANY LONGER, AT LEAST NOT FOR A LIVING.
HELL IVE GOT A SB220 THAT NEEDS A ZENER DIODE, A TENTEC OMNI D THAT NEEDS'
MINOR REPAIRS, SEVERAL ANTIQUE JOBBERS I SHOULD WORK ON, BUT I CANT. MY
MIND CANT CONCENTRATE ON THINGS LIKE THAT ANY LONGER. THAT IS WHAT I HAVE
DONE ALL MY LIFE. AND WHEN I WAS IN THE JOB MARKET AFTER MILITARY TIME I
DID A DAMN GOOD JOB AT IT. I CAN LISTEN TO A RADIO AND KNOW WHAT'S WRONG'
WITH IT. I CAN HEAR A ACCURATE DESCRIPTION AND GIVE GOOD ADVICE ON HOW TO
FIX IT AND/OR WHERE TO LOOK. BUT I CAN'T DO HAND'S ON ANYMORE. SO THERE
GOES THAT.

WHAT ABOUT TEACHING YOU SAY? WHAT INSTITUTE WOULD WANT ME TO BE TEACHING
A CLASS, ALWAYS WATCHING THE DOOR, CHECKING THE FIELD OF FIRE OUTSIDE THE
WINDOW? ETC. ETC. NOT TO MENTION NOT BEING ABLE TO SIT OR STAND FOR ANY
REASONABLE LENGTH OF TIME.

It's not a matter of whether or not you are legally
> entitled to the money and are legally classified as "disabled"; obviously you
> are, and these are not points of contention. Rather, it is that you could
> become a self-supporting member of society and yet you choose to accept a
> government stipend each month in lieu of working for a paycheck. Make sense?
>

> "Where's that big 'ol CB RAMBO??"
> "I wanna hear him TALK TOUGH!!"
>
I WILL GIVE YOU CREDIT ON BEING ABLE TO ISOLATE YOUR HATE FOR ME (OR WHAT I REPRESENT IN YOUR EYES), AND THE FACT THAT THE VIETNAM WAR WAS USELESS AND IN ALL PROBABILITY A CRIME. AT LEAST YOU APPEAR TO BE ABLE TO SEPERATE THE WAR FROM THE WARRIOR. MANY PEOPLE OF MY GENERATION STILL CANNOT DO THAT. MANY OF US VETS FEEL WE HAVE BEEN RAPED BY OUR COUNTRY. AND HAVE EXTREME BITTER FEELINGS BECAUSE OF THAT.

WHETHER YOU APPROVE OF IT OR NOT, I EARNED MY "STIPEND". I PAYED LONG AND DEAR FOR THE PRIVIDLEGE OF BEING CALLED A "MOOCHER" A "COWARD" AND A "LIAR". NOT SAYING YOU HAVE SAID ALL THESE THINGS, BUT YOUR "FRIENDS" HAVE. SO EXCUSE ME IF I DON'T JUMP UP AND SAY "THANK YOU FOR TREATING ME LIKE TRASH"...MAYBE NEXT TIME THEY HAVE ANOTHER VIETNAM YOUR KIDS WILL GET THE OPPURTUNITY OF HAVING THEIR LIVES DESTROYED BY A POLITICAL AGENDA. MAYBE THEY TOO WILL RUN INTO SOMEONE LIKE YOU. WHAT GOES AROUND DOES INDEED COME AROUND.

3448. Kenwood TH-79a 4 sale/trade

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-06 00:00:00 UTC
From: Robin <"rastoma 'at' chatt.net">
Message-ID: <6sv2pq$n16$1@camel29.mindspring.com>
Source record: 162506

I have a Kenwood TH-79a dual band HT that I would like to sell or trade. It is good condition... it does show signs of normal use... the most noticable being some light marks on the plastic LCD cover. The symbols on the rubber keypad are not worn off like some you might have seen.

Includes Kenwood PB-32 battery (600mAh)
Kenwood brand dual rapid charger (worth $100 by itself).

I got this radio a year ago from a local EMT driver whose had it since it was new, but misplaced the paperwork during a move. So all I have is the battery, radio and charger. If you have used this radio before then you will familar with it's operation, if you have not, it does have a menu system that will help you with most of the functions.

I'm looking for best reasonable or would like to trade for a 9mm pistol depending on brand/model... or maybe even a .40.

Robin

You dont need a mod, its in the main menu.
Press "set" repeatedly until you see "dP 25" in the window. Now turn
the main tuning knob till it reads "dP 5" and then press
V/Mhz to return to normal operations. -Pat

Source record: 162509

How many more months of antenna parties left in 1998?

Wouldn't it be great to avoid white knuckles and frost bit at your fall antenna party.?

I have been retired for the last two years (with a lot of time on my hands) and have developed a 2 element Delta Loop Driven Array Antenna with a F/B Ratio 4.5dB greater than a conventional quad antenna.

You can view a photo of the antenna, performance charts and graphs and a

further overview of current 10-meter activity on my web page.

For those of you who would like to HOME BREW THIS ANTENNA. I will provide an assembly manual, parts list with photos and drawings.

The manual is a step by step format.

Will provide a price list (10 meter version) for any hard to find parts upon request.

The manual with parts list (FOR THE 10 METER VERSION) IS 25 PAGES OF TEXT, PHOTOS AND DRAWINGS for $10 POSTPAID in USA.

Thank you,
73
RICH W9JUC

P.S. WEB PAGE IS AT
http://homepage.interaccess.com/~jpearl/DeltaXray.html
Or search ALTAVISTA or INFOSEEK or LOOKSMART first page under
"10 meter 2 element delta" (in quotes)

3454. TM-741A Low power out on 2M

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-06 00:00:00 UTC
From: Michael Tyson <mtyson@concentric.net>
Message-ID: <6svaad$mvt@chronicle.concentric.net>
Source record: 162512

Anyone have any experience with the TM-741A? On 2M it's rated for 5/10/50 watts, but I'm getting 3/9/19 watts. Low & Medium power are close enough, but 19 watts is like 4dB down from the rated 50. I've tried a different antenna & feedline, but SWR with both was quite low so that's not a problem. I only have the users manual that came with the radio which isn't much help. Anyone know where the power out adjust is? (I hope it's just an adjustment & not realy malfunctioning.)

Thanks,

73 de Mike, N2GEG

Nope, but here's what he did say.

: Excuses, excuses. The real truth of the matter is that you want something
: for nothing, and you are just too damned lazy to do what is required in
: order to upgrade to the highest class of amateur license.

One can infer from this posting that Robert believes that not upgrading to the highest possible level in *any* field is proof of being "just too damned lazy". It follows that if Robert has not upgraded to the highest college degree then he is "just too damned lazy". He cannot have it both ways. Dr. Williamson, a nocode tech, *has* upgraded to the highest college degree which I assume Robert is just too damned lazy to do.

I have lots of trade goodies.
Let me know what you need ham/military/tube.

--WANT LIST--
Military Infantry Radio Stuff:
For the BC-659/PE-120 I need
AN-29 antenna, manuals and accessories.

Any BC-611 or BC-721 radios.

BC-474 radio and accessories.

For the BC-611-C, BC-611-F and BC-721
I need manuals and accessories.

Looking for a complete/excellent
US-issue SCR-300 with all accessories.

Aircraft Stuff:
ATB and ATD transmitters in unmodified condition.

"ARC-5" type equipment:
Any radio or accessory marked
SIGNAL CORPS US ARMY
and AIRCRAFT RADIO CORP.

T-15, T-16, T-89, T-90 transmitters.
R-112, R-113 receivers.
Any receiver or transmitter factory/depot for
over 9 MCs other then the T-23/R-28.
BC-942 receiver (looks just like an R-28).
Any unit factory-built for 12-14 VDC.
Any unit factory-marked in non-English languages.
Any connectors and shock mounts.
Any control head for ARA other then 3-receiver.
Any shock mount for ATA or ARA.
Anything at all for RAT or RAV.
AN/ARC-5 control box types C-24, C-25, C-26,
C-27, C-29, C-39, C-43, J-17, J-28, J-34.
External tuner TU-6.
Interested in anything unusual or low-production
for the ARC-5/SCR-274N families.

SCR-xx-183 Equipment.
Prefer Aircraft Radio Corp make
(I have SCR-xx-283, SCR-274, GF/RU and ARC-5 to trade):

BC-xx-232 transmitter control box.
Junction Box TM-AH-172.
Antenna Switching Relay BC-xx-198.
Any coil set for receiver BC-xx-229.
Any coil set for transmitter BC-xx-230.
Tuning dials MC-372 and MC-390.
Connectors PL-61, PL-62, PL-63, PL-64, PL-77, PL-104.
BD-AS-83 Dynamotor supply.

ARC-type-12 control heads--
C-14 which runs the early R-13 (black wrinkle paint).
C-15 which controls the ARC-type-17 set (painted grey).

TCS:
Need TCS-13 remote control and antenna tuning unit.

Wrong, wrong, wrong. The title of the thread is "Converting 50Hz to 60Hz".
That means the *original quantity is 50Hz*, not 60Hz. The increase from
50Hz to 60Hz is 20%. So much for math majors. Increase / base x 100
gives pct. change.

I never said it was not ambiguous. You yourself said it didn't make
sense and that proves that you parsed it incorrectly. It's not really
ambiguous if one parsing makes sense and the other doesn't. My
neighborhood has a sign which says, "Slow Children". Why would
anyone care if the children are slow or not?

Most transformers made for use in USA are-or at least were- made for,
and were originally labeled for, 50-60 cycles. Unless you have one that
was
marginally built it should work OK at 50 cps although you might want to
derate it slightly. The sympton of abnormal operation should be excessive
heat.

>Evidently you did miss it. You should have asked your FCC examiner what
>the FCC thinks about CW and Morse.

I didn't have to. When we, the examinees, were ushered into the testing room the government official explained that he would administer a five-minute Morse Code exam (no mention of "CW"); we were to provide at least one-minute of error-free copy; at the end of the five minutes he would say "stop" and we were to put down our pencils - anyone caught making cor-rections after that would fail the test. He went on to say that those who passed would then be asked to send one-minute of code (again, no mention of "CW"). At that point, I remember him glancing at my jacket and giving me a wink (I was wearing my USCG wind-breaker - later I learned he was an ex-Coastie himself). That one wink immediately melted all the stress I was feeling! I don't recall a thing about the written exam I took that day, but I do remember every detail of the *code* test.

During my five months of U.S. Coast Guard Radio School, we had daily *code* practice. I still have all my manuals and paperwork from that time; no mention of "CW" except as an operating mode.

>He would have probably directed you to the definition in Part 97.
>Maybe you ought to take a glance at it [sic] Jeff.

Like all good amateurs, I do have a copy, and I do more than just glance at it.

>I had hoped to settle the issue when I provided the reference last time
>this discussion came up.

I'll be waiting with baited-breath for your "reference."

3480. Beta Testing Wx Software Anyone ?

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-06 00:00:00 UTC
From: n2ckh@raven.cybercomm.net
Message-ID: <35f1e5b8.653089205@news.cybercomm.net>
Source record: 162620

Wth the recent release of the SkyWarn/2001(tm) MS-Windows
software in support of the Peet Bros. Ultimeter(R) family of home
weather stations.

We are pleased to annouce the development of a version for
the Radio Shack WX-200 and compatible models made/sold
by Oregon Scientific, Huger and others.

We are accepting beta tester applicants at this time, ownership
of a WX-200 or compatible instrument and no interest or affiliation
with the development of similiar software is required.

Please visit our website at http://www.qth.com/n2ckh.bytewise.org
for additional information and the on-line beta tester application
form.

Sincerely,

/s/ Steve Hajducek, N2CKH

Wrong, Vietnam Dan. The only source here is YOUR own admissions on this newsgroup. By YOUR own statements, you continue to mooch off of the US taxpayers to the tune of $24,000 per year. When someone sits home all day, doesn't work, collects a government check for $2,000 each month, and has $3800 to blow on a flippin' HAM RADIO, there is a problem. God, how do you stand to look at yourself in the mirror? Shame on you, Vietnam Dan!

This is an interesting comment from someone who obviously hates Mormons so much. They are among the most industrious work ethic folks I know of. (For the rest of you this dweeb has posted almost 600 hate messages in alt.religion.mormon groups) How do you feel about Mormon Extras? Love 'em or hate 'em that got to be tough.

You know you really are stupid. You obvously have no idea what my license class is yet you go on and on about my inability to upgrade. Apparently the exam system currently in place does not keep out the truly stupid. BTW is Robert L. Coyle Sr. a lazy amateur he doesn't seem to have upgraded have you shared your feelings with him.

Excuses, excuses. The real truth of the matter is that you want something
for nothing, and you are just too damned lazy to do what is required in
order to upgrade to the highest class of amateur license.

>

These frequencies are between 200kHz and about 600kHz (bottom of the AM band) so I'd say it' would get out as good as a low powered AM station. (of course the antenna would'nt be as efficient or as high as a typical broadcast station. Typical AM broadcast stations run about 5kW, so you're on the low end of a typical broadcast station.

At night, it would get out quite far. several hundred miles. During the day at least a hundred miles. Beyond that it becomes a noise and propagation problem.

> - As a radio broadcasting station, on 492 meters with a power of 250
> watts.
>

really low power. bottom of the AM band.

> - For international radio communication on 16800, 11200, 8400 and 5600
> kilocycles with a power of 500 watts.
>

Close to the 20m, 30m 40m bands respectively. Could support worldwide communications with a good antenna and the right propagation. Easily span either ocean or one end of the continent to the other (when the band is open)

> Any observations would be appreciated ... this unit was in operation in

Still pissed about losing 11 meters huh? You mean your big bad HF rig
won't receive 27MHZ? Your only trying to receive it not talk to it.

>If nothing else, the North Koreans have a peculiar sense of humor.
I'm glad they do because it's apparent you don't.

>"Beware of the massive impossible!"

Just my 2 cents, not trying to start a argument and i will not respond
to any other flames or post, just wish the amateur community would
broaden there horizons a bit. I mean come on guys communication is
communication, regardless of what means you use you are still just
trying to communicate. Sure there are bad apples on 11 meters, but i
have heard just as many bad apples on other bands. Just imagine if
they tried to put that satellite on 3898 or one of the many other open
soars on the HF band. Yall have a good one.

Still proving that you'll answer anything with my name on it, huh, puppet?
And thatks for _confirming_ your status as a brain-impaired mass of festering
pus.
I don't have a failed military record. Prove otherwise. I have an Honorable
Discharge, for serving in the USAF honorably, something a cowardly street
urchin without any education obviously lacks. What's the matter, couldn't you
get in because you lack that high school education?
Hahahahahahahahahahahahahahahahahahahahahahahahahahahahahahahahaha

>_ X-Newsreader: AOL Offline Reader _
>
>Is West Virginia still ranked 50th in student test scores or did you move up
>to 49th by beating out Mississippi?

Well, stupidass, I haven't been a student since 1988, when I was in Grad
School.
And before you even go there, I had some time in between High School
graduation, something you couldn't even achieve, and graduating from college. I
was in the USAF and working, so try harder, fool.
I didn't attend any schools in WV, so your pitiful atttempts to continue your
ignorant stereotyping of people from WV are really a moot point. You might have
to look that one up, in fact, I'm sure an ill-educated, slobbering, sub-human,
inbred tub of cellulite monkiered CBRambo will most assuredly have to. Tell us
about your status in the ghetto, boy.

This has been an interesting and educational discussion. It occurs to me that if a manufacturer wanted to make a transformer as inexpensively as possible, he'd use the minimum amount of copper and the minimum amount of iron that he could get away with. The rated current would establish the wire size, but the smallest number of turns would be dictated by the amount of magnetizing current that could be tolerated. (Although the magetizing current would heat the wire, it would probably be quite a bit less than the load current. But increased magnitizing current would increase the flux density in the core.) The iron could be reduced until saturation begins to occur under full load. (The flux density under full load shouldn't be a whole lot greater than under no load.) So in a minimally designed transformer, both the number of turns and the amount of iron would be decreased until the cheapest combination is found that has acceptable heating. The heating will definitely be greater at 50 Hz than at 60 Hz. A small transformer used in expensive electronics equipment might be designed to handle 50 Hz and have a dual primary, so that one transformer could be used for all applications. But if the market is competitive, no overdesign could be tolerated, and a transformer for a 60 Hz application would be designed to get good and warm at 60 Hz, and probably quite hot at 50. I have a good example, a 13.8 volt 15 amp power supply with linear regulator. This is a very competitive market, so every component is carefully designed to just meet the requirements. The power transformer in this supply gets too hot to comfortably touch when the power supply is running without any load. I'm sure that it would be nearly smoking at 50 Hz.

3520. MultiMode 1.0.0 Decoding Software Released for Macintosh

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-07 00:00:00 UTC
From: cps@access.digex.net
Message-ID: <cps-ya02408000R0709981858490001@newsreader.digex.net>

The latest version of MultiMode, Version 1.0.0, is now available for MacOS computer systems.

The URL is http://www.access.digex.net/~cps/sss14.html

MultiMode is an application which allows your Macintosh to decode several different modes of non-voice communication often heard on shortwave radio.

MultiMode allows you to decode and display morse code, RTTY, fax, and many other modes on your Mac, without any extra hardware!

In the past, dedicated hardware, often costing hundreds or thousands of dollars, was necessary to demodulate and decode this transmissions. Today, you can use the
processing power of your Macintosh to decode and display these modes, without any hardware.

MultiMode decodes the following signals:

Morse Code (CW)
RTTY (Baudot)
ASCII
SITOR-A
SITOR-B / FEC / NAVTEX
FAX
ACARS
WWVB Time Decode
DTMF
Audio Spectrum Display to aid in properly tuning in stations

Someone at a recent hamfest that I attended stated that "Morse code is the most efficient means of communication possible" (right, Jerry?). I cannot believe the idiocy of this statement.

Pick up your cordless phone. If you purchased it in the last year it is probably operating with a digitally encoded spread spectrum mode. Seems to me that is damn efficient, given loads of these phones can operate at the same time, in the same narrow band of frequencies, with NO interference.

CW is fun, it can get thru QRM where SSB and other modes fail, but it is 100+ year old technology.

The same folks that are advocates of the code need to be advocates of 21st century modes as well.

I do not agree! As an engineer who has designed many power transformers, please understand that this is a NONLINEAR device! In other words, if your magnetic flux reaches saturation, the incremental inductance drops sharply and primary excitation current develops large spikes, causing serious heat loss in the primary winding. Eddy current losses increase as well. It is NOT advisable to operate a 60 Hz transformer on 50 Hz! Smoke results.

[...]

Would it reach saturation with such a small change in frequency, and
unloaded?

Power transformers make reasonably good audio tranformers over a limited
frequency range. They can't be that sensitive to the difference between
60 Hz and 50 Hz, can they?

I can see in running a power distribution plant, you'd be interested
having the proper transformer. But hams have been known to do worse
things and get away with it.

Best Regards,

Mike

ROGER WIDEMAN does indeed have an obsession with FAGGOTS. He shows this obsession right down to his internet service provider, America Online ... an open supporter of the FAGGOT lifestyle and FAGGOT chat rooms.

He comes butting in on this newsgroup, then spends all of his time either writing a useless message, or ATTEMPTING to defend himself when one of us replies to them.

Oh well, I am glad to see a majority of those on this newsgroup have already seen ROGER WIDEMAN for what he really is ... a loser; and idiot who must have had a pretty bad life, and thinks that by posting these messages, he can somehow take it out on the world. Well, I am never offended by any of ROGER WIDEMAN'S messages, about me or anybody else. I sit back with a nice ice-cold Coca-Cola Classic, read them, and get quite a good laugh.

: >upgrading is you. But there's something strangely un-American about
: >putting forth hard work and sweat, isn't there.

: This is an interesting comment from someone who obviously hates Mormons
: so much.

You're really grasping at straws now, aren't you?

The Church of Jesus Christ of Latter-day Saints, with headquarters based in Salt Lake City, Utah, is a cult. They openly discriminate against women and (until the release of Official Declaration 2 in the 1970s) African-Americans. They continue to promote polygamy, which by definition is the sealing of one man to more than one woman. The Temple ceremonies are duplication of Masonic Temple Rites (Joseph Smith was a Mason). Joseph Smith has been proven time and again to be at best a fallen prophet and at worst a fraud.

I was a member of the LDS for three years. How long were you a member?

: They are among the most industrious work ethic folks I know
: of.

Only industrious at fulfilling their own agenda. By the way, how many of the General Authorities are black or women? How many of the Quorum of Twelve are blacks or women? How many of the Seventy?

Something tells me that after you have opened this can of worms, you will run away like a coward and decline to answer.

: How do you feel about Mormon Extras?

If they have put forth the effort to upgrade all the way to the highest amateur license that one can possess, then they are to be commended for their hard work and the fact that they simply didn't whine about how tough it is to do it. If they are still members of the LDS and continue to be deceived by the teachings, then I feel for them and hope that they will soon become enlightened, separate, and begin following the true Savior.

: You know you really are stupid.

No, actually YOU are the stupid one. You can't debate me on-topic, so you drag out things that have absolutely no bearing on amateur radio and thrust them in my direction, hoping to deviate this discussion to something that doesn't make you feel so uncomfortable. I pity you.

>Isn't a 20% increase over 50 equal to 60?

Sure, if you choose 50 as the base (original) quantity. But 60 Hz is the
standard AC freq'y in the US, so we use that as a base for all other
comparisons. 50 represents a 16 2/3 percent *decrease* of 60.

To Cec: Note that 10 Hz represents a 83 1/3 percent decrease of
60 Hz, not 600%!!

>Wrong, wrong, wrong. The title of the thread is "Converting 50Hz to 60Hz".
>That means the *original quantity is 50Hz*, not 60Hz. The increase from
>50Hz to 60Hz is 20%. So much for math majors. Increase / base x 100
>gives pct. change.

Nice try, Cec, but I'm correcting *you*, not the subject line! All the
responses have spoken of running a x-former designed for 60 Hz on a
50 Hz line. The fellow I did a fol-up to said no over-heating would
occur. That's when I mentioned my "thought experiment" comparing 60
Hz to 10 Hz. 60 was and is the base quantity here.

To assist your short memory, the original poster inquired about
running a 60 Hz transformer in Europe, so that makes 60 the base
for all our calculations.

Remember, 10 represents an 83 1/3 pct decrease from 60 (not
600 as you claimed; 10 is certainly not the base, here.)

60 is the base, so there! Go sit in the corner now.

* Acknowledgements

A Brief Historical Overview

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis E. LeMay (K0GRL, W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the

tremendous influence that amateurs, including those within TAPR (Tucson Amateur Packet Radio), have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

What is an Elmer?

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship.

The term Elmer has probably been in use since at least the 1950's (I'm told, but haven't yet confirmed, that it appears in British amateur radio publications from that period). The name Elmer was likely chosen because Elmers are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two. The first U.S. reference to Elmer in print was from Rod Newkirk, W9BRD, in his "How's DX" column in QST from the early-to-mid-1970's.

Such Elmers have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies. Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer Today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

How do I become an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers may register via my formatted, on-line, World-Wide Web Registration Form:

http://www.novia.net/~pschleck/elmers/register.html

I would prefer that you register using the above form (which not only ensures that nothing is omitted, but also makes adding your entry much easier by automatically converting it to HTML). However, volunteers who are not yet on the Web are also quite welcome, and may register by writing me at elmers-request@novia.net with their name, amateur radio callsign(s) (if any), E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages, FTP archives, mail servers, or mailing lists, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@novia.net, the default Reply-To: of this message when posted to Usenet News). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt.

Also, an unfortunate increase in the amount of unsolicited junk-mail that I receive (often dozens of messages _every day_) has forced me to become much more ruthless about filtering incoming E-mail. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not only not get reviewed for some time, my incoming mail filter (procmail) may even bounce it back to the sender if it can't be automatically categorized as originating from known, friendly senders or have known, welcome keywords in the headers (Elmer is obviously one of those keywords).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use the Mailing-List or Mail-Server options:

World-Wide Web (WWW):

This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.novia.net features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:

* http://www.novia.net/~pschleck/elmers/
* http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
* http://www.cs.ruu.nl/cgi-bin/faqwais *

(_Note:_ Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)

Usenet News:

This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with Subjects like _"Amateur Radio: Elmers Resource Directory Part */* [*-*]"_ (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

* news:rec.radio.amateur.misc
* news:rec.radio.info
* news:rec.answers
* news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news

sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news@localhost" or "usenet@localhost") if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

Anonymous FTP:

If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

* ftp://ftp.novia.net/customers/pschleck/elmers/
* ftp://ftp.cs.buffalo.edu/pub/ham-radio/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

Internet Gopher:

The latest copy of the list should be available from the following Gopher sites:

* gopher://gopher.univ-lyon1.fr/
* gopher://ftp.win.tue.nl/
* gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

Mailing-List:

Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

Mail-Server:

If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/README
send usenet/news.answers/radio/ham-radio/elmers/index/subject/part1
send usenet/news.answers/radio/ham-radio/elmers/index/subject/part2
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/list/part5
send usenet/news.answers/radio/ham-radio/elmers/list/part6
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

Acknowledgements

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

Amateur Radio: Elmers Resource Directory

More information about this list can be found in the companion posting
to this file, "Amateur Radio: Elmers List Info and Administrivia."

73, Paul, K3FU

- A -

John Ackermann N8UR

jra@febo.com

http://www.febo.com/

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

I'm now working heavily with Linux, and help run a TNOS/Linux BBS, and
a Linux native-AX.25 switch. Although I'm not "the world's greatest
authority" on either, I'd be happy to help folks with questions to the
extent I can.

I've developed some experience with full-duplex packet repeaters. I've
built 2 19.2 repeaters, and am working on a 9600 Baud one now.

My World-Wide Web Page above has a reasonable set of resources for
digital networking, including HTML versions of some of my work, sample
configuration files for Linux AX.25, and some Linux software tools, as
well as the Ohio IP address coordination info.

I've just finished writing a book on TCP/IP that TAPR will publish
(hopefully) by the end of the year. It'll be called _Networking
Without Wires_ and is a completely rewritten, and greatly expanded,
version of the old _IntroNOS_ document I wrote several years ago. In
the meantime, I've made the old _IntroNOS_ available in HTML format on

my World-Wide Web Page above.

TAPR (Tucson Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the
networking picture, how to link areas using different networking
schemes, how to set network parameters, etc. The list's charter will
be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by
sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further
details about the Net-SIG (including upcoming conferences).

TAPR Vice President and Board Member

Joint ampr.org IP Coordinator for Ohio subnet (44.71.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org
IP numbers in Ohio to:

ipaddr@febo.com

which is a mailing list read by a team of coordinators.

[_Editor's note:_ All ampr.org coordinators are listed in the document

David Andrews ZL2SX

andrews@clear.net.nz

I have been involved with the Amateur Radio International Travel Host scheme. I also chair the NZART Frequency Management and Technical Advisory Group, which is responsible for all repeater coordination and band-planning (LF, MF, HF, VHF, UHF, and above) in New Zealand. I would be pleased to answer any queries with regard to reciprocal licensing or frequency coordination that may arise.

Jeff Angus WA6FWI

jangus@skyld.grendel.com

I run NOS as a tcp/ip <--> AX.25 mail bbs gateway. I also run a few nodes, And, I have successfully installed UUPC/extended 1.11k and SNEWS for those MS-DOS afficionados out there. SCO UNIX, Win95 networking information available.

ampr.org IP Coordinator for California - Los Angeles County (44.16.xxx.xxx)

Hardware, software and wetware questions answered either with correct answers or the name of someone who does know.

Webmaster, Franklin County (Alabama) Amateur Radio Club:

http://www.qsl.net/fcarc/

I work small contests and do a little bit of DXing on 17 and 10 meters. I set up our club's Field Day activities last year. I do a lot of computer work on IBM/compatibles and a lot of Internet work. I used to do a lot of digital work, including running a BBS and node, but am no longer involved in packet. I am in the process of building a 440 MHz repeater and am the programmer of the KE4ZIM repeater controller. I really enjoy working with youth in general.

NEWS, INFO, RUMORS, DXPEDITIONS, IOTA ACTIVITIES and more

DX CALENDAR, WABA AWARD (rules & scores) now available

in English Version and Italian Version

Same server of the IK4LZH site for QSL MANAGERS.

I am an IOTA chaser, I work DX and I join contests. Actually I'm in
love with RS sats and DOVE telemetry. I'm the Shortwave Listening
(SWL) coordinator of the Italian Amateur Radio Association and I have
a regular SWL page in their official magazine Radio Rivista. Recently
I joined the 425 gang that produces the 425 DX News bulletin. I
translate it into English and send it to many DXers via E-mail. I also
maintain a WWW page to provide the bulletins graphically with previous
numbers and more to come. I've been an SWL since 1974 when I received
a receiver as gift from my parents. Now I'm 36 and I'm running also a
free BBS devoted to HAM/SWL.

American Radio Relay League | Justice is being allowed to do whatever
225 Main St. | I like. Injustice is whatever prevents
Newington, CT 06111 USA | my doing so. -- Samuel Johnson

American Radio Relay League (ARRL) Webmaster

The American Radio Relay League is pleased to announce the startup of
ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams,
carrying ARRL news, details on upcoming hamfests, conventions and
Amateur Radio examinations, the ARRL Publications catalog, information
of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich,
WY1Z, and the other Boston Amateur Radio Club volunteers who've worked
since December 1994 to keep ARRL up and coming on the Web via the ARRL
home page they installed and maintained at oak.oakland.edu. Their
volunteerism helped show us that upgrading our Internet connection to
a level that allowed on-campus Web service would be essential to
ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger
and better are _essential_ to its ongoing success, so please drop by
and say hello!

I have been in ham radio for 15 years and played and worked on many modes and radios.

My home page above is a Link page I mostly use to find what I am looking for.

Devon Bowen KA2NRC

bowen@olsen.ch

Maintainer of the rec.radio.amateur.* Supplemental Archives available from:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

[_Editor's Note_: Fixes have recently been made to the FTP software at this site so that the above URL will now work with most Web browsers.]

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the server's help facility, the rec.radio.amateur.misc FAQ, or additional server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Work on this project has been delayed such that its completion time is somewhere in the indefinite future. In the meantime you can access the current server.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

I have been with Linux since it was first available. I have been a keen homebrewer for over 30 years, but I don't do much now due to lack of time. I have built lots of HF gear, including synthesized gear, and also a lot of test gear. I have also homebrewed magnetic loops, which is great fun. I have put together PC's and help other people with Linux issues. On packet, I run TCP/IP using LNET which is WAMPES-adapted for the UK by Darryl, G7LED.

(Exams for Del Norte County every other month)

I've been a ham since 1933. I taught electronics, AC, DC, and radar principles/theory at the U.S. Army Signal Corps School at Fort Monmouth, NJ during World War II. I was chief engineer at KDB in Santa Barbara, CA from 1946 to 1951. I was engineer and technical director at NBC TV studios in Hollywood and Burbank from 1951 to 1982. I have one student now going for his General and prefer to teach the overall picture. I have done little or no benchwork on new equipment in the last 15 years. I'm still learning digital theory and techniques, but boards filled with chips do not evoke a sense of familiarity or recognition. I'm also still learning about the Internet.

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
P.O. Box 636
Griffin, GA 30224-0636
USA

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

PGH SATERN - Primary repeater system for Salvation Army

Maintainer of Link Communication List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/link.html

Only present users of Link Communication Products are welcome to join the list server. If you need information on Link Communications Products, contact them directly. Presently there are aprox 325 Members on the list server.

Maintainer of ACC List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/acc.html

The ACC list has approximately 300 members at this time. I am trying
to restrict the list to only ACC users (control people) and owners.
The list is also supported by the new owner of all the rights to ACC,
Link Communications. I am also running the Link repeater controller
list server. It has approximately 90 members at this time. The way to
join the list server is to send me a short E-mail and tell me what
equipment you are using. (Note: I have no ties to Link Communications
or ACC. I started the Link list first and found how useful it is. I
had a lot of requests to start the ACC list and did it.)

I've been an active Linux advocate since it first appeared on the Internet. I was looking for an operating system that would better meet the needs of my interest in Amateur Radio and provide me with an environment in which I could actively experiment and develop. Linux provides that and I've been promoting its use within Amateur Radio ever since.

I'm an early contributing member of the Linux Documentation Project, and you'll find the amassed works for it at:

http://sunsite.unc.edu/mdw/

ampr.org IP Coordinator for Sydney, Australia Metropolitan Area subnet
(44.136.xxx.xxx)

(I'm also the co-administrator of the Sydney (Australia) University of
Technology Internet/ampr.org gateway.)

I'm happy to assist with information relating to:

* Linux, especially when related to Amateur Radio.
* Amateur Radio Internet Gateways

* Batteries
* Power Supplies

I am a practicing electronics engineer (for over 35 years) with expertise in solving problems in the design of linear circuits, audio signal processors, low frequency (DC to 10 MHz), low noise, field effect devices, power supplies, batteries, and similar analog situations. I'd be glad to assist others in the solution of their electronic problems in these and tangential areas. I started in ham radio as a kid in the 50's, vacuum tubes, motor generators, and most everything related to WWII surplus equipment. Was a design engineer at Texas Instruments for several years in the heyday of discrete devices and linear integrated circuits, mostly for military and surveillance use. My present concentration is toward digital telephonic communications. Have now gotten pretty familiar with use of the Internet. I guess it goes without emphasis that my capability goes beyond the areas I listed as being most competent, but I could be a resource you may apply as you feel my experiences would be helpful.

* Microwave

Background in microwave and RF systems and components. My company (Techlock Distributing) has had the first microwave components Web site on the Internet - since 1993. We offer components up to 50 GHz. Discount to hams runs from 10 to 30 percent depending on product.

Ham since 1964. Originally WA3BQU, DL4WU, DL4AA.

Fred O. Maia W5YI

fmaia@internetmci.com

http://www.w5yi.org/

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
USA
Tel. +1 (817) 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse Code training products are also available from every Radio Shack nationwide. Color photographs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 (817) 461-4663 anytime, including evenings

and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 (817) 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 (800) 322-1117.

Wearable Computing and Personal Imaging:

http://wearcomp.org/research.html
http://wearcomp.org/wearpubs.html

[_Editor's Note:_ Steve is a graduate of the MIT Media Laboratory and is currently a member of the faculty at the University of Toronto. He has done a considerable amount of research into, and implementation of, wearable, wireless networked computer systems using amateur radio (via a 56kBaud GRAPES radio modem) as the physical layer. He is arguably a pioneer in "Wearable Computing." You may have read about him in the April 1996 issue of Scientific American in an article called Smart Clothes, CQ-VHF, the February 1997 issue of IEEE Computer, or seen him on the October 1996 episode of Scientific American Frontiers on PBS called _Inventing the Future_. He is interested in connecting with other serious amateur hobbyists pursuing like or similar technologies. See his World-Wide Web Pages above for

more information.]

emcom4hosp@aol.com

Hospital Disaster Support Communications System (HDSCS) Coordinator

HDSCS World-Wide Web Page:

http://members.aol.com/emcom4hosp/

For over 15 years, the 90-plus members of the ARES/RACES-affiliated Hospital Disaster Support Communications System (HDSCS) of Orange County, California have served over 35 hospitals in nearly 50 emergency situations. At the new HDSCS site on the Web, you can find out how volunteer Amateur Radio operators can be an important backup communications resource for hospitals, if the hams are well organized and trained.

There you will find:

* How HDSCS organizes to support hospitals
* What "dedicated communicators" are and why they are important
* Frequently-Asked Questions about hams helping hospitals
* The surprising answer to "How often do hospitals need hams, anyway?"
* Response from hospitals served by HDSCS
* Info given to new HDSCS members
* Recruiting hams for hospital communications
* And lots more...

homingin@aol.com

Homing In Column World-Wide Web Page:

http://members.aol.com/homingin/

(Homing In is a column in 73 Magazine featuring information about radio direction finding, hidden transmitter hunting, and jammer tracking.)

This site features:

* Southern California T-hunting, what equipment the winners use
* International-style foxhunts have come to California
* Complete design fixes for the Dick Smith doppler set
* Updates to the Moell/Curlee book (TRANSMITTER HUNTING---Radio Direction Finding Simplified), including board/kit/parts sources

and building tips
* Frequently-Asked Questions (FAQ) and answers from the Homing In mailbox
* Index and subject list of all Homing In columns in 73 Magazine through September 1996 (over 90 articles)
* And lots more...

The Homing In site is written and maintained by Joe Moell K0OV. It is not affiliated with 73 Magazine, Wayne Green Enterprises, or any other commercial entity.

* Volunteer Examiner (ARRL VEC)

I have scratch-built all my antennas for all bands, written antenna programs, and experimented with many types of antennas over the past 38 years. I have been a ARRL VE for 5 years now, as well as team leader. I started in computers by building the Altair in about 1968, later switched to Radio Shack. In 1982, I started assembling Clones, and still do to this day (for a living). I have written code in Basic, Quick Basic and C.

I have built power supplies, both low-voltage-high-amperage and hi-voltage-low-amperage. I have wound my own transformers, one of which still runs my VHF station after 20 years of use.

It is very hard to pin-point what one knows, as we are constantly
learning. Also, we must remember the old adage, "USE IT OR LOSE IT."

Jes, mi parolas la Internacian Lingvon, Esperanto.
Yes, I speak the International Language, Esperanto.

Esperanto, the International Language, is spoken by 600,000 to
2,000,000 people in over 110 countries.

Over 75 countries have national Esperanto organizations, including
third-world countries like the USA.

In Europe there is a very active Esperanto Ham Radio association known
as ILERA - Internacia Ligo por Esperanto-Radioamatoroj (International
League for Esperanto Radio Amateurs).

For more information concerning Esperanto, contact ELNA (Esperanto
League for North America) at +1 (800) ESPERANTO (377-3726) or send
E-mail to elna@netcom.com. (The ELNA membership list also lists member
ham calls and E-mail addresses.)

If you wish a ham Esperantist for a penpal, contact me at one of my
addresses above.

I am an NTS operator running an unattended digital (Winlink, latest version) digital system. I operate a hub station for Eastern Canada Digital operations, including AMTOR, PACTOR, and CLOVER.

NTS Training for CW, Phone, and Digital Modes:

http://cc.recorder.ca/~ve3bdm/

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet, as well as system administration of UNIX and UNIX-like operating systems (with an emphasis on networking, E-mail, etc.). My current concentration is on writing UNIX based tools (e.g. software for logging, antenna design, propagation analysis) that can be shared throughout the ham community.

I also maintain the ve7tcp.ampr.org server. This system hosts a variety of ham-radio related mailing lists as well as a comprehensive World-Wide Web site and FTP archive, and was one of the first Internet servers dedicated to ham radio. The system is also a hub site for the ampr.* newsgroups.

Information on the mailing lists offered can be had by sending an E-mail message to:

listserv@ve7tcp.ampr.org

containing (only) the word:

INFO

in the message BODY. The WWW server is located at the URL:

http://ve7tcp.ampr.org/

and the FTP server resides at:

ftp://ve7tcp.ampr.org/

Direct login access to the system is available to anyone holding a currently valid amateur radio license. The server provides a number of useful tools for the radio amateur, including satellite tracking software, CAD design software, SPICE, and other tools not generally available to people running on Microsoft Windows or Apple based PC's. (It runs 4.4BSD UNIX.) To obtain a login on the server, send a photocopy of your current amateur license, along with a SAE and IRC to:

Lyndon Nerenberg
1804 Juniper Street
Prince George, British Columbia
Canada V2L 1N7

Your login and password information will be mailed to the address listed on your license.

Maintainer of the Internet DX Mailing List

To subscribe, send an E-mail request to:

dx-REQUEST@ve7tcp.ampr.org

with the following line in the message BODY:

subscribe dx

I am involved in training for new and upgrading Hams, paying back for Elmering received over the years as I came into Ham Radio. I am a VE for VEC's active in local area. I am most interested in assisting young, old, and handicapped persons to discover Ham Radio. However, I want to help anyone that is committed to getting a Ham license or upgrading. I am most active on Ham satellites, mobile and fixed HF, Digital modes and construction. I am an avid electronics constructor, repairer and experimenter. I am trying to sample all modes, bands, and interest areas. I am also skilled in Public Relations, demonstrations, and "de-mystifying."

Dakota County, Nebraska ARES Emergency Coordinator (EC)

ARRL Official Bulletin Station (OBS)

I have been involved in Packet since 1984. I currently run a Packet BBS with the F6FBB software, as well as a number of Packet Nodes using TheNet Software. I have coordinated the Volunteer Exam Session in this area for a number of years. I operate 2 meters and HF, both CW and SSB. DX'ing and Contesting are some of my activities, along with collecting prefixes.

I have had NWS spotter training and am part of organizing the spotter network in the Siouxland area. AS the EC of Dakota county, I work with the Woodbury County, Iowa EC in the spotter effort.

During my business activity as a Systems Engineer with IBM, I have developed some expertise in PC's and have worked with the DOS, Windows and Windows 95 Operating Systems along with many Ham-related applications.

I have organized a number of Ham events such as Packet Symposiums and am the current Chairman of a Regional Ham Radio Convention.

I am handicapped & spend most of my time at home. My handicap is motor related. I have taught classes in most of the areas listed above. I have been a ham for 25 years. I enjoy talking & working with people. I am a past vice president & newsletter editor for my local radio club. Although not an ARES/RACES member, I have done a lot of disaster & emergency communications. Our local club is VHF-oriented & provides communications for several community events each year. I am active on packet & just recently sold my NODE. Please E-mail or mail me if you think I can help you in any way. By the way, I am married & my XYL is also a ham. I am a Life Member of The American Radio Relay League.

I have a large collection technical manuals. Copies are available for the cost of duplication and postage. THIS NOT A BUSINESS. It is done as a courtesy to those needing assistance.

I lecture and conduct workshops on the subject of ElectroMagnetic Interference, primarily related to problems encountered in the

Clinical (Hospital) environment. This is a program based on papers of which I am the principal author published in journals related to Biomedical Engineering. Related to this activity, I have and use signature analysis equipment and, depending on area and time, am available to assist in location and identification of sources of severe interference to radio amateur activities.

* Australian QRP Home Page
* Peter Parker's Projects Page

Following feedback from readers, I'm pleased to announce further improvements to my World-Wide Web Page.

The main change is the use of .gif images for the schematics and other diagrams instead of .bmp files. This dramatically reduces the size of the files (10k vs 141k). Also, it is now possible to view the schematics online.

Recently added is information on a simple 2m antenna for portable use. Information on other projects will be added as time permits.

You can get to these pages via the URL above.

+1 (937) 256-4355

Dayton, Ohio E-mail Elmers

Sponsored by the Miami Valley (Ohio) FM Association (MVFMA):

http://www.febo.com/

The Dayton E-mail Elmers service allows new or prospective hams in Dayton and Southwestern Ohio, or even experienced amateurs who are venturing into a new aspect of the hobby, to send an E-mail request for assistance. Volunteer on-line Elmers then can provide a response in the "Elmer" tradition of mentoring new or less-experienced hams.

Today, many hams prepare for their license exams through classroom programs, and the individual Elmer's touch isn't as common as it once was. The E-mail Elmer service is an attempt to restore this long tradition. The MVFMA hopes that the initial E-mail exchange will be the start of an ongoing Elmer relationship in the best tradition of Amateur Radio."

Hams may use the E-mail Elmer service simply by sending an E-mail message to:

elmer@febo.com

and posing the ham radio question they'd like to have answered. Users will get a machine-generated confirmation, and within a few days, they will get a response from one or more of the volunteer Elmers.

For more information, or to volunteer as an E-mail Elmer, contact me at my phone number or E-mail address above.

I have considerable experience in computers, some in packet, with an informal training in electronics. My background includes electronic surveillance countermeasures such as looking for interesting signals or wire connections with spectrum analyzers/receivers and TDR's, etc.

I'm not very active in operating, but have had a fair amount of experience when young.

I would prefer dealing with people in my local area, since many well-informed experts are available via the Internet.

Ken Pulfer VE3PU

jkpulfer@rac.ca
jkpulfer@igs.net
aq627@freenet.carleton.ca

Radio Amateurs of Canada (RAC) Treasurer and Webmaster

(RAC is Canada's national amateur radio society.)

RAC World-Wide Web Page:

http://www.rac.ca/

Callsign E-mail Addresses for All Interested Canadian Amateurs

Any licensed Canadian amateur radio operator can now have an E-mail address of the form:

callsign@rac.ca

This means that you will no longer have to advise all your contacts of any new E-mail address if you change your Internet service provider. Canadian amateurs will not have to keep track of dozens or hundreds of E-mail addresses. Just remembering the callsign is all they will need.

RAC is able to offer this free service thanks to the volunteer help and support of Information Gateway Services (IGS) of Kanata, Ontario, Canada, and in particular the work of Rene Kahle, VA3RDK. Rene developed the E-mail aliasing software, and set up the server hardware (IGS also donates server space for the RAC and ARAS World-Wide Web Pages that contain much useful information for Canadian amateurs).

If you wish to obtain a callsign E-mail address, simply send a message to:

alias@rac.ca

with:

callsign = realaddress

in the BODY of the message.

For example, if my callsign was VA4KP and my real (current) E-mail address was:

ham@qsy.ca

I would put the following in the BODY of the message:

VA4KP = ham@qsy.ca

Any subsequent mail addressed to:

VA4KP@rac.ca

would be redirected by the IGS server to:

ham@qsy.ca

Of course, such mail would NOT go anywhere near RAC headquarters, nor be seen by RAC officials, nor placed in a public database that could be exploited for "junk-mail" distribution. Any E-mail addressed directly to:

ham@qsy.ca

will also be delivered as in the past without passing through the IGS server.

The E-mail aliasing service is currently set up on a trial basis. If it works well and amateurs find it useful, it will remain available for all who wish to use it.

Educational Advisor to the American Radio Relay League

I specialize in developing growth in volunteer organizations and have published and made public presentations on this subject.

I have written and published training/educational curriculums for Novice, and Tech Plus amateur radio licenses. Of interest is the fact that amateurs licensed through my courses are very likely to upgrade as evidenced by the high number of hams in the Lawton, Oklahoma area that hold Extra Class licenses.

I organized and conducted a SAREX in southwest Oklahoma that involved over 3,000 students in 21 schools in seven cities of southwest Oklahoma. The SAREX consisted of an essay contest with the winners being able to ask questions of the astronauts while they orbited the earth. The live SAREX was broadcasts over the Lawton, Oklahoma Public School systems cable television to the public in southwest Oklahoma.

More recently I have been involved in securing building permits in Florida to put up amateur radio towers in this highly restrictive State.

* Current Instrument and Controls Engineer, Consolidated Edison
* Current Battalion Signal Officer, 2nd Brigade, VADF
* Certified, NABER and ANSI 45.2 Level III Engineer

I am a consulting engineer, which takes me to various locations. My home address is shown above and in the call book. I can answer E-mail (as everyone knows) from anywhere that I may be.

Don't know where you are going to use a old horse like myself. I am part of the old and part of the new displine. I have fabricated all my wire antennas which includes the matching device (transformer) and been building equipment for more than a quarter of a century. I also manage to repair all my equipment - when parts are available. I restore early age broadcast receivers and HF transceivers. I know the old Heathkit HW100 and HW101 very well and built a Heathkit 5400 transceiver with matching Power Supply. I have constructed many amplifiers and own a Swan, Collins (S-Line), Kenwood, Heathkit, and Johnson. I am very active in the two meter band.

In addition, I have restored many an old Coleman Lanterns (which is very enjoyable) and also have some American Gas Machine Lanterns (1930's).

Peter Reynolds (KE4BAD) E-mail: reynolds@nc3a.nato.int
Voice: +31 70-314-2409 FAX: +31 70-314-2176
Senior Scientist, Radio Branch, Communications Division
NATO C3 Agency, P.O. Box 174, 2501CD The Hague
THE NETHERLANDS CompuServe: pdreynolds@compuserve.com

http://www.xs4all.nl/~pdr123/pdr-home.htm

I am very lucky in that I earn my living in radio communications, so my expertise is fairly broad (but not focused on amateur techniques only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over the years. I always enjoy discussing and researching a communications problem so if you don't see it listed above drop me a line anyway, especially if you happen to be in Europe.

President, Santa Barbara (California) Amateur Radio Club (SBARC)

SBARC World-Wide Web Page:

http://www.sbarc.org/

The Santa Barbara Amateur Radio Club is an educational non-profit 501c-3 corporation. It represents a membership of over 400 members, operates several VHF/UHF repeaters and a club station, provides the

financial support to local ARES, and presents amateur radio classes
and a follow on Elmers Program.

* Volunteer Examiner (WCARS VEC)

I am the Assistant Principal at Estill County High School in Irvine, KY and have been in the education business for the past 23 years. I enjoy helping people earn their ham radio license privileges. I have a test team with the WCARS group and have been testing for a good number of years. We have tested over 300 hams during the last three years.

I also have been in the repeater business since 1973 (146.820) and have held a ham license longer that any other resident of Estill County Kentucky. I am the fourth ham to be licensed in our community, the other three have either become Silent Keys or moved from our county. I am very proud to have held a ticket for almost thirty years. I hope through my experience with the local emergency team, I can also provide advice on EMS. I founded the local Rescue Squad in 1978 and am still President of the corporation. I was also the local DES Coordinator from 1977-1993.

Chuck Rippel WA4HHG

crippel@exis.net

Secretary, Collins Collectors Association

The Collins Collectors Association would like to invite those of you who have an interest in Collins Radio to subscribe to the now fully automated Collins Reflector. This service is sponsored by the CCA and is provided at no charge to Collins enthusiasts.

There is an FAQ which will hopefully be sent to each new subscriber when they "sign on." If you would like one and don't get it, drop me an E-mail at my address above.

There may be a few initial bumps and glitches at first but we hope those of you who choose to participate will enjoy it.

As of 1/6/97, the Collins Reflector will be fully automated and I will discontinue forwarding the mail manually as in the past.

The new automated list processor will be a real upgrade. It will enable you to get the material in nearly real time and does not require me to forward each message manually. You will get the material much quicker than before. The Collins Listserver behaves much like the Boatanchors list. Simply, you subscribe to the list, send it messages which it then "reflects" back out to all those who subscribe. This is done once every ten minutes.

You must resubscribe to the new listserver in order to continue to participate. The automated list server follows the same guidelines contained in the CCA FAQ. Please continue to follow those guidelines for posting and contributing.

Here is how to subscribe:

Send an E-mail message to:

listserv@listserv.tempe.gov

Leave the subject header of the message blank and in the BODY, simply type:

subscribe collins

The listprocessor will output an E-mail message back to you with easy to follow instructions asking for your confirmation. At that time, you will be asked to send a second E-mail message to the listserver. Follow those instructions exactly and send the second, confirmation, message to the listserver.

If all is successful, you will be signed up to the list and a complete set of instructions will be sent back to you in the form of an E-mail by the automated list server.

Finally, a very big thanks to Dave Kelly, AI7R and the City of Tempe, AZ who have graciously provided and set up the server. Dave and the Collins Collectors Association sponsor the Collins Reflector as a no charge benefit for Collins afficionados everywhere. Enjoy!

* Volunteer Examiner (Laurel and W5YI VEC)

I have been a ham since 15. I have been an Extra class operator since age 17, and a VE since age 18. [_Editor's note:_ Possibly the youngest Contact VE ever.]

I am an avid HF QRP (low power) and mobile operator. I have spent literally hundreds of hours installing my mobile station (IC-706 and Screwdriver antenna, plus more grounding straps than I can remember) in my 1995 Neon.

Most of the time I operate QRP CW mobile.

Why? It challenges my operating skills as much as possible, plus QRP is safer (RF-wise) than is 100 or 1500 watts. With the effects of RF exposure still unknown, I don't feel like exposing myself to high-power RF fields any more than necessary, and if 3 watts will do the job, so be it, I'll emit it.

In addition, people are generally amazed when you mention that not only are you running just 3 measly watts output power, and on top of that you're doing it from your car as it's zipping down the Interstate at 65 mph. They just can't believe it's possible that less power than a nightlight is bouncing off the ionosphere and ground three times, and is still able to be detected 10,000 miles away.

I'm here to tell them it is.

I enjoy building kits, and consider myself to be a good builder.

I am a fair contest operator, and enjoy 35 WPM CW ragchews as well as hunting for DX.

I am active with both the Laurel (Maryland) and University of Maryland Amateur Radio Clubs, and operate with both during public service events. I have been the chief HF operator at University of Maryland HF-related events (Field Day and Sweepstakes) for the past three years.

As a Volunteer Examiner, I have conducted roughly 150 test sessions, testing at minimum a thousand applicants.

I have recently given Novice/Technician license instruction, as well as taught a 5 WPM code class. I have been told that I have a knack for

describing complex subjects in ways that make them far easier for
laypeople to understand.

* Volunteer Examiner (ARRL and W5YI VEC)

My favorite aspect of amateur radio is contesting. It drives my
station improvements and operating proficiency. I have played around
with antennas and made various station modifications to improve my
contact efficiency. Along the way I have solved some RFI problems,
built many of my station accessories, installed and built some HF
antennas, put up a small (40') tower, etc.

I volunteer as a RACES operator in no particular capacity. I help with
a few VE test sessions a year mostly representing the ARRL VEC with
the Burlington ARC team.

I work as a SRAM design/product engineer at IBM Microelectronics in
Essex Junction, Vermont. I have been interested in electronics and
computers since a young age, but only got my amateur radio license in
1993 as a Technician at the age of 31. I got to know the code and
upgraded to Extra in February of 1994.

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can Elmer on most subjects, but not spread spectrum or packet.

I have nearly 30 years experience in electronic/computer service work. I enjoy designing, building, and operating vacuum tube and solid state equipment. I restore, test, repair, and operate antique radio equipment. The maximum power I use for daily operations is always below 100w, and most of the time, I operate at QRP (5w) or less! (More with less.) I have a real enthusiasm for building just about anything from nothing, as part of the homebrew aspect of the hobby. When not working DX, enjoying a good contest, or have a great time on Field Day, I watch over my 6m repeater, or work VHF packet. I am glad to be of help to those in need! I fully support the Elmer program as a means to bring new people into Amateur Radio. I teach Novice and Tech classes for aspiring Amateurs. I am also a merit badge instructor for the scouting program, and the advisor for the Bloomsburg University Amateur Radio Club.

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service their own equipment. I would like to see a turn-around here...

ARRL Technical Specialist

I am a pilot (N6141F) with more than 10 years as air and ground search and rescue. Active in ARES, RACES, and Civil Air Patrol (CAP West 41).

I also have a home in Alpine, Texas, USA.

I have started doing a weekend or four-night amateur radio licensing class that works great. I use the ARRL video course and it works super. We watch the tapes, answer questions and then spend a three-hour session giving them practice Novice and Technician tests, then reviewing each question they missed. We have even had students that had studied at home and just did the last session for review.

I now do four or six classes a year, some in Texas and some in New Mexico.

Courage Center
HANDI-HAM System
3915 Golden Valley Rd.
Golden Valley, MN 55422
USA

Manager, Courage HANDI-HAM System

I have information pertaining to Amateur Radio and physical
disabilities or sensory impairments, such as blindness.

Visit us on the World-Wide Web:

http://www.mtn.org/handiham/

HELP WANTED: READERS NEEDED BY HANDI-HAMS

The Courage HANDI-HAM Center needs volunteer readers to record ham
radio books and publications on audio tape. Volunteer readers provide
a valuable service to persons with severe physical disabilities and

sensory impairments who cannot use regular printed books.

Volunteers should hold an Amateur Radio license and be familiar with hobby terms and expressions. A clear speaking voice and the ability to read the written text of Amateur Radio books and describe the diagrams and pictures are essential.

HANDI-HAMS will provide a tech sheet and a sample tape to new volunteers, as well as a copy of the book to be read and cassette master tapes. Readers will need a good-quality cassette tape recorder and a quiet place to record. Some of the books we would ask readers to tape would be ARRL license manuals, special interest Amateur Radio books, and instruction manuals for radios.

This volunteer work can be done in one's own home, at one's own pace, as long as there is a quiet place to read. It is a wonderful way to share Amateur Radio with others!

AA9PW Amateur Radio Exam Practice World-Wide Web Page:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

This WWW site allows users to practice for the US Amateur Radio examinations on-line. The written examinations for all five classes, novice through extra, can be generated complete with figures, filled in on-line, and then graded. The results are presented question-by-question, and also graphically by subelement, so that users can identify areas which require further study.

More advanced options include saving the results of each examination a user takes on-line. These results can be used to monitor progress and also as a basis for generating exams tailored to a user's needs, ensuring that all questions are practiced.

Exams can also be generated and E-mailed to users without WWW access:

Send E-mail to exams@eeyore.biochem.mcw.edu with a line in the BODY of the message like:

generate novice

This will result in a novice exam being generated and E-mailed back to you with the answers included at the end of the E-mail. These exams lack the figures, so reference to a printed copy is advised! Simply replace "novice" with any of the other exam names (technician, general, advanced or extra) to get the other exams. To request multiple exams in one E-mail, write multiple "generate" lines.

Other exam resources such as the question pools, copies of the exam figures, and FCC Part 97 are also available. A comprehensive help page exists to guide users through the facilities of the site. All questions and queries are welcome!

==========
This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited
equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when
the baby is asleep, so the XYL demands silent running. Besides, with
my wimpy wire, there is little point in trying to run voice.

ARRL Official Emergency Station (OES) and Local Government Liaison

I have experience with antennas (calculations, construction, and repair), all HF digital modes (including HF FAX), wiring of TNC's to radios, custom switchboxes for TNC's, radio modifications, math calculations, personal computers (DOS, Windows, Networking, and HTML), and of course, on-the-air operation and CW. I would love to work with young students wanting to become hams. I hope I can help.

I am currently a mature student at King's College, University of Aberdeen, studying for the B.Sc. (Hons.) Computing Science. I enter the third year of this course on 25th September 1997.

I run a telephone BBS in the Fidonet network. This is currently offline due to problems with the telephone line, but is expected to be back up in late September of 1997.

I also have my own IBM compatible computer, which has a P166 processor, 32M of RAM and a total of 4.6G of hard drive space, spread between three EIDE hard drives. This computer normally runs under the Linux operating system, and I am gradually moving the above Fidonet BBS system across from MSDOS to Linux. Because of the lack of suitable software under Linux, I am writing one myself, having had 15 years experience as a professional programmer.

I am a regular participant in AuroraMUSH, a MultiUser system, and have authored several patches to the suftware controlling it. It may be visited at:

telnet://amush.ml.org:4190/

I have been involved with Packet radio for over a decade now. Indeed, it was packet radio that got me interested in Amateur Radio in the first place.

I started up a mailing list connected with the Amateur Satellite world, currently using manual subscriptions. The list is:

Space.Repeater@cus.umist.ac.uk

and is for the discussion of the possibility of placing an amateur band repeater or transponder in orbit around a planet other than Earth, or on the surface of one of the other planets.

I will add that, although I can claim to be something of an expert on both Linux and Packet Radio, I am definitely NOT an expert on the two together.

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (The Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w#xxx and w#xxx-cis. Mail sent to w#xxx would go to your Internet address, and mail sent to w#xxx-cis would go to CompuServe. MCImail accounts have

the form w#xxx-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

I used to run my own bulletin board system before the Internet came along. I also do my own monthly newsletter called the _Hamband DX'er_ for many years. It is still going. I take care of the ARRL SWL Bureau. My name is listed in any callbook under the various QSL bureaus. I am an avid DX'er of the ham bands with over three hundred countries confirmed. Presently I run my own WWW Page to help others with QSL info requests.

DX QSL Info World-Wide Web Page:

http://www.coredcs.com/~mtw/

The DX QSL Info File is updated monthly. It is in Xbase format and runs under a variety of software, including:

* Dbase
* Vplus
* Totalham

I am especially interested in VHF/UHF and microwave amateur bands as
well as Amateur television. I am treasurer and a founding member of
the newly-formed Triangle Amateur Television Association in
Raleigh-Durham-Chapel Hill, NC. I am willing to share my expertise in
the following areas:

* ATV - Getting started, starting local activity, repeaters.
* VHF/UHF - Propagation, what you need to get started, operating
portable, contesting, weak signals, and DX.
* Sealed Lead Acid Batteries - How to take care of them.

ARRL Laboratory Engineer

* Radio Frequency Interference (RFI) matters
* RF Exposure Safety/Regulations
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111, USA. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the ARRL Info Server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111, USA. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many EMI/RFI files are also available from the ARRL Info Server. See Mary Robertson's entry for more information.

ARRL Technical Information Service Coordinator (tis@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many TIS files are also available via the ARRL Info Server. See Mary Robertson's entry for more information.

See Jon Bloom's entry for information about the ARRL World-Wide Web Home Page.

I am a Civil Engineer by training and a DX'er by choice. My Elmer taught me how to work pile-ups and how to build antennas, having put up 12 towers all over 100 feet. I know what it takes to get a tower up. I don't climb anymore, but have a lot of info. I like working on antennas and have several big Moseleys up in the air. It would be great to pass on what I have learned, as we are not all born knowing how to do everything, and the older I get, the smarter my father gets.

I have extensive experience in ELF, VLF, and RF non-ionizing radiation tests from the Hebrew University Environmental/Occupational Department at Ein Kerem Hadassah Medical School, Jerusalem Israel. I have just returned to the USA after 13 years in the field in Israel. My tests have involved Overhead Power lines, Antenna Systems, Cellular phone, CRT's, etc. I had been on staff at the Medical School for several years, working very closely with Dr. Milton Gordon (4X1AA, SK) and Dr. Elhud Richter. My reports were used to make the environment a safer place for children and adults alike.

Assistant EC for Josephine County (Oregon) ARES/RACES

I am involved in commercial RF and wireless design, and willing to share experience with other amateurs. I have a complete test equipment facility for checking radios, antennas, etc.

Local NEWSLINE outlet: Program airs on the 147.30 repeater right after the Monday night net.

I am active on HF, VHF and UHF, including voice and digital modes, and
will help in whatever areas I can for most of Southern Oregon.

Dan Henderson N1ND

dbhenders@worldnet.att.net

+1 (704) 684-6339

P.O. Box 188
Skyland, NC 28776

USA

* ARES/RACES/SKYWARN
* CW
* Field Day
* HF/Contesting/DX
* Novice/Tech Instruction
* RFI
* Seminars/Lectures
* Volunteer Examiner (WCARS VEC)

I've been licensed over 25 years. I was one of the first VE's
certified by WCARS VEC. I have served for several years as a
proofreader for the NCVEC Question Pool Committee. I work closely with
the WCARS Directors, and am an active VE with that organization

I have been involved with Emergency Communications and Traffic
handling from almost day one, having earned my first BPL at age 16 as
a novice. I have served as Assistant EC, County EC and currently serve
as District Emergency Coordinator for ARES/RACES and District Radio
Officer for Emergency Management Area F of North Carolina. I also
coordinate SKYWARN activities in our area.

I have served as Hamfest chairman, assistant chair, etc., as well as
an officer of the local club, the Western Carolina Amateur Radio
Society. I designed our homepage, am quartermaster of club equipment,
and carry the keys to the club repeater. I frequently teach both
theory and code for local Novice/Tech classes.

I have been Field Day Chairman for five years, serve on the RFI
committee, hold WAS Awards both as a Novice CW operator and SSB Extra
Class, a DXCC with 86 of them worked as a Novice. I am also the
National Board Chairman of the Geratol Net, a WAS net which meets
nightly from October thru April. I also am chairman of the local
club's packet committee.

I "dabble" in helping newcomers make dipoles and other simple HF
antennas and am frequently a new licensees first contact. (A debt I am
repaying to my three trusty Elmers of so many years ago, two of whom
are now silent keys)

I would be willing to help in these general areas on-line or close-by
on the phone or in person. (I am a college professor by trade)

* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list,
with the blessings of Paul Prescott, N1AAC, who took over from Our
Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over
the rec.radio.amateur.* Working Group mail list, formerly maintained
by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to
homebrewing tube transmitters and receivers ("Glowbugs," a sort of
intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@theporch.com (*)
* glowbugs@theporch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives, etc.

The new automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

I am 36 years old, have been a ham for 22 years, and currently hold an Extra class amateur license. I got my first ticket when I was 14 years old, thanks to my Elmer who is now a silent key.

I am an instructor for amateur radio classes, Novice through General, and teach CW at least once per year. I am also the VE team liaison for the TEARA VE team, and test monthly in Smithfield, NC.

I maintain a number of repeaters from 10 meters through 900 MHz including ATV. I build a lot, and enjoy restoration/construction of vacuum tube amateur gear.

I enjoy ragchewing and DXing, with about 75% of my operating time on HF spent on CW. I also enjoy weak signal and FM operation on 6, 2, 1.25m, 70cm, and 33cm. I am experimenting on 23cm and 10 GHz.

I maintain a number of sites, some of which are related to amateur radio. The URLs are:

Civil Air Patrol (CAP)

I was Communications Officer and former unit Landstation Bluebird 284, 1980-87. Statistically, Landstations are relatively rare. A land station in CAP is an HF-capable station operating from both mobile and permanent locations as needed. As a land station, I checked into several regional nets for the Missouri Wing of the CAP. I am familiar with the CAP emergency protocol as well as MARS and ARRL. Also, I have extensive teaching experience for Novice to General levels and currently am a teacher.

* Novice/Tech Instruction

I would like to help any new or prospecting hams in any way that I
can. My personal experience is limited, but I am net control of a
local Elmer Net here in Pittsburgh. This net meets every Saturday
evening at 9:00 PM local time on one of the repeaters of the North
Hills Amateur Radio Club (146.88- MHz). This net is intended to help
all new hams. Many experienced hams also check in and can answer
questions and share their wisdom with beginners.

I am an Extra class operator. I work professionally as a manager of a computer services department in a large hospital system with more than 12 years experience in PC and Host Systems networking, I hold a degree in Electronics Engineering, as well as many hours in Computer Science Engineering. I operated a land-line BBS for 8 years, and now maintain a packet mail drop on 145.01 MHz. I maintain the TriCounty Amateur Radio Club (TCARC) of North Texas home page on the web:

http://www.qsl.net/tcarc-ntx/

and am the President of the TCARC. I am also the appointed Emergency Coordinator for the City of Azle for Tarrant County RACES.

I like to give talks to Amateur Radio Clubs, school groups, Scouts, and similar groups, mainly about Amateur Radio topics. Recent presentations I have done include Field Day preparation for clubs, Computers and Ham Radio, Building Your First Dipole. I'm open to presenting other topics as well. I also help local amateurs to prepare their own presentations and talks.

I am a Baptist minister, and would be delighted to administer a Ham Radio theme wedding! <grin> I would also provide ministerial services for Ham related special events.

I will also provide free Novice/Tech licensing instruction for groups of 5 or more in the Tarrant/Parker/Wise County region of North Texas. Typically this involves about 18 hours of lecture, and some self study on the parts of the students. I'll do this free for nonprofit endeavors.

P.S. I monitor 146.98 Boyd repeater while commuting, and you might find me working HF CW just about any time.

Log in as:

anonymous

with your E-mail address as password.

Via TAPR's Listserv (http://www.tapr.org/tapr/html/internet.html)

TAPR maintains several SIGs in various interest areas. To get the latest list of SIG groups, send an E-mail message to:

listserv@tapr.org

with the subject line:

Request

and one or more of the following in the BODY of the message:

list

for list of mail groups on TAPR.ORG

information listname

(where listname is the name of the mail group)

to request the information on any mail group

subscribe list your_first_name your_last_name

(where list is the name of the mail list you want to join and your_first_name and your_last_name are your first and last names, respectively)

to subscribe

Some of the current SIGs include:

NETSIG Regional Networking SIG
BBSSIG BBS SIG
HFSIG SIG on HF Digital Topics
DSP-93 SIG for those that are building TAPR/AMSAT DSP-93 kits
APRSSIG SIG on APRS
TAPR-TNC SIG on TNC Issues
DSP SIG on general DSP topics
MIC-E SIG on supporting the TAPR APRS MicEncoder kit

TAPR-BB Announcement channel for TAPR bulletins and information

General Information about TAPR:

* Ever heard of a TNC?
* Interested in general packet radio information?
* Interested in Spread Spectrum Communications?
* Interested in high-speed packet operations?
* Interested in other types of digital communications?
* Interested in experimenting or building kits?
* Interested in keeping up-to-date on national digital and packet issues?

Then you might be interested in TAPR!

Goals:

* Support Research and Development efforts in the area of amateur digital communications
* Disseminate information on packet and digital communications
* Provide affordable and useful kits for experimenters and hobbyists
* Pursue and help advance the amateur art of communications through publications, meetings, and standards

History:

If you have used a packet radio TNC, then you are already a part of TAPR history.

The TNC (Terminal Node Controller) project was the first big project that TAPR tackled and completed. Now TAPR covers a wide range of interests including: APRS, Spread Spectrum, networking, Timing, DSP, HF, and much more.

TAPR was founded in 1982 as a national organization with interests in the areas of packet and digital communications. Today, TAPR continues as a membership supported non-profit amateur educational research and development organization. TAPR currently has more than 2500 members, worldwide. TAPR continues to develop kits for the amateur community and is working actively on publications and communications standards.

Membership:

Membership in TAPR includes a subscription to the quarterly published Packet Status Register newsletter. PSR has been published since 1982 and is recognized as an authoritative source for up-to-date user and technical information on packet radio. Much of the material in PSR is timeless. Back issues may be obtained from the TAPR office. Membership in TAPR is $20 US for one year in USA, Canada, and Mexico. Outside North America is $25 US.

Join the amateur digital-revolution -- Join TAPR!

Phil Karn KA9Q

karn@unix.ka9q.ampr.org

http://people.qualcomm.com/karn/

High-Performance Software Modem Project

Recently I've been working on a prototype SQPSK (staggered quadrature phase shift keyed) modem for the amateur satellite channel. This modem is implemented totally in software running on a PC with an ordinary (non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB transceiver bandwidth.

I've made good progress and have put some info up on my web page about it, including an audio file to show what it sounds like in noise when the signal is still copyable, available from:

http://people.qualcomm.com/karn/ham.html

Watch that page for an announcement of when I actually release the code, which I plan to integrate into KA9Q NOS.

Spread Spectrum

I've been trying to answer the question of consequences of promoting relatively wide-band digital modes on band occupancy and throughput (i.e., What gets optimized? Are there tradeoffs in quality vs. quantity?) in the context of the spread spectrum rules debate, but I think it needs to be a much wider discussion. See my reply comments to the FCC on this issue:

http://people.qualcomm.com/karn/papers/index.html

(See also Steve Bible for more information on Spread Spectrum)

[_Editor's Note:_ I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

I'm with the Team Eifel ARS located in Bitburg Germany. We are a club primarily set up for American Servicemen and Women in the Eifel Region of Germany. We provide ARRL VEC test sessions and help individuals, regardless of nationality, gain a U.S. license. This is accomplished by providing study materials and teaching. We also provide assistance in obtaining German Reciprocal licenses.

I have a fair background in packet, a general knowledge of satellites, and I'm fairly knowledgeable in hiding antennas.

Author of the QRZ! Ham Radio CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 (602) 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous FTP server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

I have a page of Macintosh Shareware I have written:

http://www.best.com/~jluszcz/software.html

One of the programs I have written allows you to connect the Radio Shack Digital Multimeter with PC Interface to your Macintosh Computer. It is Apple Scriptable. The Radio Shack multi meter has a serial port (RS-232).

It is called MacMultiMeter

Peak the grid...dip the plate...see ya...just kidding.

Turn main power on. Peak Drive control for maximum background rx noise.
Turn on Heater switch, wait about 2 minutes.
Turn mic gain all the way counterclockwise. Key mic PTT, or hit the
TX button on rig. With meter is IC position, observe the bias
setting. It should read 50ma. If not close readjust with bias set
on back of rig.
Unkey, place rig in tune mode. Adjust drive full clockwise, or until
you get some indication on ALC meter position. Peak the Drive control.
While still in tune position, put meter in RF output. Adjust the Plate
control for maximum deflection, also fiddle with the load at same time.
Unkey the PTT.
Place rig in CW mode. Turn drive down a bit. Key in CW mode and while
in relative output, or watching a wattmeter. Repeak the plate and load
for max output. Do this quickly. Check the IC position under full pwr
out and you should see about 250 ma.

Have fun

Source record: 162423
Body handling: HTML body converted to readable text

In a tight-fisted tantrum <6svubq$eob@news.voyager.net>, "Daniel Hicks, Jr."
"I'm not a geek, really!" blubbers:

>ROGER WIDEMAN does indeed have an obsession with FAGGOTS. He shows >this
obsession right down to his internet service provider, America Online ... an
>open supporter of the FAGGOT lifestyle and FAGGOT chat rooms.

IRONY ALERT!!!!! Tell, me "Einstein," how does your ISP
determine your sexual preference?
"WHOSE THE BRAIN DEAD MORON???" says the quite illiterate
Daniel Hicks, Jr. W8MMQ, in

If that is the case, slurp.net reveals your obsession with rimjobs.

>He comes butting in on this newsgroup, then spends all of his time either
>writing a useless message, or ATTEMPTING to defend himself when one of us
>replies to them.

I've got you whining in several posts, bucktoothed choad. Tell us about how
your alcoholic father abused you, will you?
"WHOSE THE BRAIN DEAD MORON???" says the quite illiterate
Daniel Hicks, Jr. W8MMQ, in

>Oh well, I am glad to see a majority of those on this newsgroup have already
>seen ROGER WIDEMAN for what he really is ... a loser; and idiot

"WHOSE THE BRAIN DEAD MORON???" says the quite illiterate
Daniel Hicks, Jr. W8MMQ, in

>who must
>have had a pretty bad life, and thinks that by posting these messages, he
>can somehow take it out on the world. Well, I am never offended by any of
>ROGER WIDEMAN'S messages, about me or anybody else. I sit back with a >nice
ice-cold Coca-Cola Classic, read them, and get quite a good laugh.

Then why the shrill whining, danny boy? Your repressed, protosimian "mind"
should do a little better than a schoolyard name lame. Maybe it's a lack of
self-esteem on your part, or lack of education. Why don't you just go back and
install those game cards in those 8088's you sell?

Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <694>
.....
>From the Editor's Desk:

Seats are still available for the 1998 Emergency Response Institute in Riverside! See the ERI (South) webpage below for more information...

I also found the Rescue Coordination Centre, Halifax page that has a good history of the RCC folks doing a lot of superb resue/recovery work at the Swissair Flight 111 site.
Please stop by and take a look.

Please welcome Robert Sanford, WB6NYC, who joins the State ACS Training Unit as a Plans/Programs Coordinator this week. Robert comes to us from New York City, where he had extensive experience in ARES/RACES operations as well as work in digital communications and SKYWARN. He will be working on training programs as well as our EMCOMM bulletin series. Welcome aboard, Robert!

Stay safe, everybody -- see you next week! Dave Larton, Editor
.....
Please welcome:

Segi Moonsamy - email: segim@durban.gov.za

web site address:
http://www.durban.gov.za/emergency/default.htm

In South Africa there are no centralised call taking/despatching centres. Provisions have been made with legislation for a single

three digit emergency number for all of South Africa (107).

I am a Division Officer (Commander) with the Durban Metro Fire
& Emergency Services, but seconded to the Emergency
Communications Centre as Manager of Staff and Technologies
(Computers, other related equipment). Purpose for this is that
Durban is in the process of applying for 107 Status (licence from
Central Government to operate a 107 centre).

Durban's present Emergency Services Communications Centre
operates similar to your Enhanced 911 centres. We have the latest
technologies, including, CAD (computer aided despatching,
ACD (automatic Call Distribution - Nortel Meridian 1), GIS
(Geographic Information Systems, Command & Control (electronics),
etc.

The centre receives emergency calls, for Fire, Medical, Police, Traffic,
utilities (during emergencies). The Centre is also responsible for Fire
Despatch.

I have written a number of standard operating procedures, but
any assistance or help would certainly be appreciated.

You have an excellent source of information on your site.

Subject: Pack Rat VHF Conference and Hamfest
Southampton, PA

ATTENTION! ATTENTION!! ATTENTION!!

You don't want to miss the 1998 Pack Rat Conference. It's packed
with lots of great technical presentations. In addition to an interesting
speaker lineup, we will be hosting a tech session in an adjoining
room. We will have a HP noise figure meter, network analyzers,
spectrum analyzers, and power supplies.
All equipment will be operational up to 10 GHz. This is not a contest.
We want to encourage people to bring stuff in just to have it checked.
We look forward to seeing everyone on Saturday Oct 3rd.
The conference starts at 0900.

Hospitality suite will be open Friday (7PM) and Saturday Night.

Free Ticket to the Hamarama Hamfest the following day,
Sunday October 4th.

See the Pack Rat Web page for additional information:

This week's EMCOMM Bulletin:

EMC148 Getting the Most Out of Training
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC148 Getting the Most Out of Training - For Release 9/7/98

At times we attend training classes and come away not realizing that we did not receive the most 'bang for the buck' that we could have received. To help solve that situation here are some tips that can make your next training opportunity more enjoyable.

- Take good notes, and organize them so they you can recover the essential information you are capturing. We often miss valuable lessons of training as a result of our belief that we can memorize the material and/or retain it in our heads. Yet, study after study indicates that extremely few of us have this innate characteristic; so take notes.

- Ask questions. The instructors have been provided to help you learn and they can't be of maximum benefit to you unless you ask questions from them. Keep the questions short, to the point, and make sure that your questions are relevant to the subject being taught.

- Document your training. Hang on to those certificates of training; you never know when you may need them again. Your resume or next employee evaluation will thank you for it.

- Enjoy, and have fun with your training. By taking a few extra steps ahead of time, you'll have a more enjoyable class, will retain the information better and be better prepared to share the lessons you learned with others.

Steps to take BEFORE taking the training or familiarization session:

- Learn as much about the subject material as possible
- Actively seek out training in its many available formats, not just classes. Often, an agency will write training standards in their respective policy manuals. These standards are intended only as ground - floor models; make every effort to learn as much as possible about the topic being discussed.

Steps to take and the end of, or after the training session:

- When asked to do so, rate the instructors; they need your input to make the class better the next time. Be candid and frank. State what you liked, what you didn't; what helped you learn, and what did not. Offer specific suggestions if they occur to you.

- After the training, periodically review your notes; you may discover items that were perhaps overlooked the first time around.

- Make the training useful. Test what you learned. Find out if it is viable for your situation and personality. If not, consider how to modify it to your own needs, assuming it is that type of educational material.

Mark,

I tend to believe that that post was in fact a troll. However, you make a good point and I have to wonder, what level of CW proficiency is really considered acceptable by the code as the ONLY true way people? It looks like the 5 WPM people were "OK" as long as they stayed up with the no coders or stayed on 10 SSB and the narrow HF CW segments assigned to them.

Is 5 WPM not now acceptable because those who have passed it might have some greatly expanded HF privileges in the future? Does it really start at 13 WPM.... or even higher?

3571. Civil Aviation - North Atlantic Radar View and Log

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-07 00:00:00 UTC
From: Andre Brandao <l42303@alfa.ist.utl.pt>
Message-ID: <Pine.OSF.3.96.980907175419.2285P-100000@alfa.ist.utl.pt>
Source record: 162434

Hello

Here is a log for New York, Gander, Shanwick and Santa Maria ATC
Centers.
Interesting to note that Severe Turbulence was reported in Santa
Maria Oceanic Airspace north of N37 and east of W35. The controllers gave
this SIGMET to all flights entering this area.
There were also many TWA flights receiving company messages for
minimum required fule at the destination.

You can find a radar view of the Atlantic airspace at the time the
log was created by going to:

http://www.geocities.com/SiliconValley/Lakes/9420/shotex6.gif

I've also included on the radar view the Swissair Flight 111 crash
location.
Hope you enjoy the log and the view.

Best regards, Andre Brandao

Gerhard, Paul and Group,

Most transmissions will occur on the frequency that the particular flight was already in contact with Flight Service or Center with. Pilot's will not generally switch off of a frequency that they know they already have established contact with an appropriate agency. If it's THAT bad, they haven't got time to be playing with the radios if they are trying to manage an emergency.

In other cases (ie: aircraft NOT in contact with Flight Service or an Air Traffic Control Center), emergency calls usually occur on 121.5MHz (243.0MHz for military...exactly double the frequency of the civilians)

I got one free today too. I bought about $30 worth of connectors, PC board,
switches, op amps, and transformers and a couple other doodads. I got the
impression I would have got it free even without a purchase, though the
cover has $2.95 on it.

Must be a sign of incipient Alzheimers!

Got out the old TS-520, blew the dust off, got a new set of finals
and put up an antenna. Then I found that the users manual had not
made the last move (or is still packed up in some of the less interesting
brown boxes.

Bottom line: Ive been fooling around with QRPs and no-tune transistor
rigs for so long that I can not remember the tuneup sequence or parameters
for this good ole tube set. Can anyone out there give me the steps or
parameters for a normal tune up (i.e. everything from turning on the power

to yelling CQ)? Dont want to burn up these find new finals because I dont
remember the process! 8-(((

If possible, please fire it back via email.

Thanks es 73!

yep. 60 is 120% of 50, but 50 is 83.3333333333333333etc% of 60. It's all how
you phrase the question. One way there is a 20% difference, the other it is
a 16 2/3% difference. In a comparison, I believe unless explicitly stated
otherwise, it should be in reference to the first figure given.

This is a copy of a letter to the FCC I mailed 9/8/98. Watch those credit card numbers!

Hello,

I hope this is being directed to the right person. I have reason to believe that someone at the FCC either used, or caused to be used my Bank One Visa card for personal unauthorized purchases.

I filed an electronic form 610 for an Amateur vanity call that included my Bank One Visa number. On the same day (August 25, 1998) that my $50.00 fee was posted to my account, over $3,000 was charged to my account in several stores in the Philadelphia area. These charges were not mine. I live near Minneapolis, and have never been,or shopped in Philadelphia.

Fortunately, for me, The $50.00 processing charge was the first time this Visa card had been used in two years, and the fraudulent charges on the same day, caused the Bank's computer to raise a flag.

Obviously I cannot prove what happened. However it is my firm belief that someone having access to secure incoming FCC internet communications has committed grand theft. I doubt that I am the first or last target for this person(s).

I would be pleased to cooperate with you in any way possible to see that this dosen't happen to anyone else.

Sincerely.

It is even more disturbing that a large number of hams DO believe it.

> If you had passed a code test, and used Morse code on HF, you'd probably
> understand it a bit better, Richie. I think you also fail to realize that the
> statement was probably made in regard to the HF ham bands....

Counting to ten....

May I be so humble to ask as to which law of physics is inoperative on
ham HF frequencies that allows Morse to be the most efficient means of
communications possible? What criterion for efficiency are being used?

By almost any objective measure I can come up with, Morse is a very
inefficient communications scheme. It doesn't operate anywhere near the
noise floor. It uses excessive bandwidth given the datarate achieved.
It requires extensive user training.

Is it fun? For many, obviously the answer is fun. But efficient it is not.

>

Does it disturb you in the least that a $40 commercial item uses technology
far beyone the dreams of anyone operating on HF? It bothers me.

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.scanner

I have two catalogs from my local store already. One was from a less
than $6 purchase. The other was on a RETURN of parts. Both times
I asked, I got the catalog.

3593. ATV in Columbus Ohio

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-08 00:00:00 UTC
From: wb8nga@aol.com
Message-ID: <1998090820174800.QAA13162@ladder03.news.aol.com>
Source record: 162244

I have been out of amatuer radio for several years and I am gathering equipment to get back on the air. I understand that several hams in Columbus have a repeater on the air for the retransmission of amateur television signals. Can someone supply me with the input and output frequencies?

Thanks,
Greg WB8NGA
Grove City

3594. VHF RTTY in Columbus Ohio

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-08 00:00:00 UTC
From: wb8nga@aol.com
Message-ID: <1998090820261300.QAA11040@ladder01.news.aol.com>
Source record: 162245

I used to be active on RTTY and I know that there used to be a group on 6 meter AM. Is there any RTTY activity on the VHF or UHF bands in Columbus Ohio? I am trying to decide if I need to throw out my ST6 or should I keep it.

Thanks,
Greg WB8NGA
Grove City

>Jim - thanks for your thoughtful reply.

You're quite welcome. I think it went well with your original thougtful post.

>When replying to someone that mentions the code - first attack him for being
>a lousy no code tech (even if you don't know if he has passed a code test or
>not). Then proceed to diminish his credibility by chiding him for
>mentioning a technology that ham gear makers have not yet embraced.

It doesn't matter what code tests you passed or didn't pass, Richie. You might have passed a 40 WPM code test, but you don't have a LICENSE to operate Morse code on the HF ham bands, so you aren't qualified to judge what works and what doesn't work when it comes to Morse code.

Sounds like you've got a bad case of the no-code tech rash on your ass, Richie. As I said, had you ever used Morse code, you'd probably more easily understand the statement. We don't use digital spread spectrum cell phones on the ham bands because we aren't allowed to, maybe that's why Kenwood isn't making them yet....

Nobody called you a lousy no code tech, Richie. You called yourself that. Little inferiority problem, or just a bad case of mic envy? Before you preach about what works and what doesn't, how about trying it first. You don't have any credibility when it comes to Morse code on the HF ham bands, so there is nothing for me to attack.

You are just a wet behind the ears whiner who doesn't want to take a code test, so you stop by here and proclaim how rediculous something is that you never tried, and then you have the gall to get upset about when somebody doesn't agree with you.

>Your one mistake however, Jim, is assuming that the person you attack
>actually gives a damn about what you have to say.

Nobody gives a damn about anything anybody says here, Richie, that's the way the program works. You must have just gotten off the bus.....

>Since Mr. CBRAmbo wants to play the 'Pester Eric Oyen" game, then he can
>start explaining his own words in various places where he has harrassed
others.

Perhaps you had better start by explaining just exactly what this "harrassment"
is that has (allegedly) taken place. I simply asked a question; I inquired as
to the whereabouts of "THE OYE BOY" over the past weekend.

>Now, as I explained to him directly in another post, I was away this weekend
>at a friends funeral and could not be reached. Now that I am back, I shall
>address this.

Please do. We're all waiting with such high anticipation for your expert
analysis.

>It is therefore required of CBRambo that he cease and desist all activities
>designed by intent (or accident) to harrass me or to use my name, callsign or
>any other likeness of me, my personal information or other intangible assets
>without my expressed written permission (and this permission shall NOT be
>given at any time for any reason to him). Further, He is also required to
>cease any e-mail contact he may have with me immediately

Here we go again...OYE BOY is gonna play WANNABE LAWYER and TALK TOUGH to me.
A few points you may wish to consider here, o' illustrious barrister:

1) I have never used your name nor your callsign. Apparently, you have assumed
that "THE OYE BOY" refers to you personally since you have taken it upon
yourself to respond to postings where "THE OYE BOY" is mentioned. Again, I
have never made mention of either your name or your amateur radio callsign.

2) Here's a free tip from the clue train: I do not need your "expressed written
permission" to respond to you in a public newsgroup. Over the past few years,
you have posted literally hundreds of messages on the radio newsgroups
(messages which you later cancelled and removed from the archives of DejaNews.)
Sorry, Mr. Wish-I-Was-An-Attorney, I do not need permission from you to
comment on your behavior on this newsgroup.

3) I have never initiated e-mail contact with you. Period. Before you respond
with your usual line of nonsense about how I am also four or five other people,
I would ask that you be prepared to prove this if in fact you choose to respond
in this manner. Again, I have never exchanged e-mail with you. Accept this or
prove otherwise.

>CBRAMBO is also required to cease and desist any activities designed by
>intent, or accident, to foster a hostile environment toward me or other users

>in the groups listed below. A copy of this notice is being sent to
>abuse@aol.com for further handling.

I am curious: just what exactly is your definition of "abuse?" Obviously, it is not the same as that of my service provider. You have threatened to "report me" to AOL on numerous occasions, yet I am still here. Why is that? Obviously, your definition of "abuse" is flawed in the opinion of my service provider. Quit your whining, will you? AOL could care less whether you personally approve of my USENET postings. They exist to serve the concerns and the desires of their paying customers. Not you.

>CBRAMBO, you are done. do not call on me again, as I will not respond. I also
>encorage others to cease responding to his jibes, remarks, inuendo's and
>libelous remarks. Since such treatemtn generally successed, he will go away
>when his audience does.
>
>
>Eric Oyen

Why don't you take your own advice, Mr. Oyen? If you do not care for my postings, DO NOT RESPOND. Wouldn't this have been simpler than composing a lengthy dissertation as you did? Next time, think before you post. Or at least read your own comments before hitting "send." You will likely be embarrassed as you realize how foolish you look when you begin TALKING TOUGH and posting nonsense like this in a public forum.

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

>It is even more disturbing that a large number of hams DO believe it.

That's because it *IS* true, among the common modes available virtually
universally to all hams (SSB, FM, and CW) -- which is exactly the context
that the average ham speaks in. Are there "more efficient" modes available?
You bet. But, to the average ham, what is sitting on someone's lab bench
is pretty worthless in everyday use.

>Does it disturb you in the least that a $40 commercial item uses technology
>far beyone the dreams of anyone operating on HF? It bothers me.

Maybe some day when that $40 mass-marketed phone has mass-market-level
buyers in amateur radio (not off too far, apparently, if Ready Freddy
gets his way) then maybe we should worry.

I couldn't agree with you more. I went into the local mall located
RS today (a corporate store) picked up a few parts and asked about a
catalog. The response was "that'll be $2.95" and I just said "I'll pass".
It's their loss.

I also have a shelf of catalogs that I regularly use and make purchasing
decisions from. I've not paid one penny for the privilege of ordering
from any of 'em.

They're giving 'em away in Portland, OR.
I asked what it took to get a catalog. The new guy told me $2.95.
I said, "no thanks, I'll browse it here." When the manager entered earshot,
I mentioned that the buzz on the web was that they got so much flack that
they were now giving 'em away. New guy said, "no." Manager grumbled
a bit and decided to give it to me.

CW is CW. If I hear a CQ at 5 WPM I am just as likely to answer it as if it is 18-25 WPM. Just passing the 5 WPM exam seems to be a pretty big accomplishment these days, judging by the percentage of new hams who don't even attempt it. Any ham who takes that first step is just as much a CW-ist as any FIST/QCWA/LifeMemberARRL/Extra class old timer... IF HE USES HIS NEW SKILL ON THE AIR.

You WILL find CW a lot more fun when you get up to 15-18 WPM. That is where it starts to resemble actual conversation. The flow of ideas gets much smoother as you get faster. You are less preoccupied with copying down each letter, instead you hear more words. Eventually you will reach a point where you don't actually write down what you hear, except for jotting down the other guy's call, QTH, RST, etc. Once you reach that stage it really is a lot more enjoyable.

Giving them Nazi's
Constipation.

Well, Sid, K5BLB, I'm gonna give it to you this month (Sept 1998)
You'll agree that Sid is Jammer of the Month.

Taken from Liberty Net Support Page.

SIDNEY MAHAN, K5BLB RECENTLY MADE A THREAT TO BREAK EVERY BONE IN WB4AIO, KEVIN STROM'S BODY. HIS THREATS ARE ILLEGAL AND IMPERMISSIBLE UNDER LAW. SEND YOU COMPLAINTS TO THE FCC OR DEPARTMENT OF JUSTICE TO LODGE YOUR COMPLAINTS AGAINST THESE TERRORISTS.

Sid has made various threats on 3950 and more:

Every Saturday night on 3950khz he participates in jamming with other assorted miscreants who cannot participate in a intelligent, relevant, conversation with other amateur radio operators. Playing "Anchors Aweigh" and other music is his forte.

Sid has also used various foul words on 3950

Sidney's favorite saying is "Moan, faggots, moan" he says in that deepthroated Texas voice of his.

More later....

Small metal unit that I received as part of a estate package. It measures 6" X 3.75" X 2." Front panel controls are:

Mode: SSB - FM
RX: On-Off
TX: On-Off

Unit is in perfect cosmetic condition. Electrical condition is unknown. The seal that says "broken seal will void all warranties" is still unbroken. A tag on the bottom of the unit has Japanese writing, and english writing which indicates "10W input." I'm not a ham and have no use for this. Will ship for $20 + actual shipping cost.

3623. ? convert Terra TPX720 hand mic to headset with remote button

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-08 00:00:00 UTC
From: Jon Dixon <jon.dixon@wanews.com.au>
Message-ID: <35F4B7BD.E09200@wanews.com.au>
Source record: 162295

Hello,
I have a radio in my glider which is a Terra TPX 720, it has a hand mike on it
which contains a carbon mike and what looks like a gain matching circuit. The
connector is a 5mm stereo socket (not sure about 5mm) but its just like the
older style stereo headphone sockets.

I have obtained a lightweight headset from one of our telephone systems here at
work. These have a boom on them. What I have done is to canabilise the headset
so that the earpiece is no longer attached but the small boom is ready to take
an electret insert. I removed the earpiece because I like to hear the glider
sounds especially when landing as this offers cues to changes in air speed which
is fairly critical near the ground.

What I need to do is to work out how to wire the 3 pin plug for the radio and
introduce a small SPST switch into the yoke so that the radio is easy to use
without reaching around for handheld microphones etcetera. This way I can fly
and talk at the same time with the minimum of disruption.

If you have any ideas I would be very happy to hear them. Every time you go near
an aviation retailer over hear it costs big dollars for what should be a simple
thing, and there never seems to be an abundance of information about the
accessories that go in these machines, just enough to use them and not enough to
make them easier to use.

Regards
Jon

:-) Nice way of putting it. Not for marketing purposes, because your
personal information is just part of their inventory?

> you don't know, do you ?

I receive many catalogs free that have not only pretty pictures advertising the seller's products, but useful information and interesting stories as well. They receive prominent places on my bookshelves, which gets their name seen by me several times a day (a marketer's DREAM). I, in turn, recommend their catalogs to my clients, who usually end up buying from these companies.

If Radio Shack wants me and my clients to look at pictures of their wares in their high-quality publication on quality paper, they will either make it worth the price of a good magazine to me, or they will give it to me at no cost to me and consider it to be part of their advertising budget.

Perhaps all those years of REQUIRING name/address/phone number to buy a battery, then sending their high-quality publication on quality paper to everyone who buys a $3 battery once a year, has caught up with them. Or maybe the marketroids who glide around Corporate all year chanting, "I can sell AIR! I can sell AIR!" have taken it too much to heart and begun to gloat that people will pay $4 to get their advertising. Whatever it is, at some point someone there will realize this isn't the Victoria's Secret catalog and this isn't working, and they'll start trying to get their advertising distributed as widely as possible to a properly targeted market instead of what they're doing now or have done before.

In answer to your query, I was attending a funeral and a wake. Who knows, the way things are going, I might be attending yours (I have no doubt that there are many people on here who would love to see you disappear. So don't be taking this as a personal threat, because it isn't).....

on 05 September 1998, <CBRambo> cbrambo@aol.com spouted forth with all the gusto of the ignorant:

Too late, I found it (and the codes you used to make such postings invisible in the rec.radio.amateur.misc newsgroup). Hiding from me will not be easy (in fact, it will be nearly impossible now).

Why don't you just leave off, huh? Whats the matter with you CBRambut? You afraid I might discover something? or are you just jealous (more like infatuated with me for some reason I am not clear on yet)?????

Since Mr. CBRAmbo wants to play the 'Pester Eric Oyen" game, then he can start explaining his own words in various places where he has harrassed others.

Now, as I explained to him directly in another post, I was away this weekend at a friends funeral and could not be reached. Now that I am back, I shall address this.

It is therefore required of CBRambo that he cease and desist all activities designed by intent (or accident) to harrass me or to use my name, callsign or any other likeness of me, my personal information or other intangible assets without my expressed written permission (and this permission shall NOT be given at any time for any reason to him). Further, He is also required to cease any e-mail contact he may have with me immediately

CBRAMBO is also required to cease and desist any activities designed by intent, or accident, to foster a hostile environment toward me or other users in the groups listed below. A copy of this notice is being sent to abuse@aol.com for further handling.

CBRAMBO, you are done. do not call on me again, as I will not respond. I also encorage others to cease responding to his jibes, remarks, inuendo's and libelous remarks. Since such treatemtn generally successed, he will go away when his audience does.

Eric Oyen

True for you. Not everybody has that ability.

I have been doing CW for 46 years and have never been able to buffer more than 3-4 characters. Thus, all words longer than 3-4 characters are missed unless I write them down. Most human characteristics fall under the Bell curve. Just because you can do something doesn't mean everyone can do it.

I found the Mensa exam to be extremely easy and scored in the upper 0.5%. How about you?

Yes your right, I'm stupid. So here are some new rules. Instead of
these rambling, disconnected, incoherent thoughts. I will only respond

to actual questions. I.E.

"Is it true your moma wear's combat boots"

"What is your hat size"

I need you to keep it simple, because Im so stupid.

Try again please, Im waiting with knocking knees.

Mensa exam????? Never took it. I really have no idea how I would do on it, and am not especially interested, unless membership gets me extra on-the-air privileges, discounts at the liquor store, etc. Sounds like just a bunch of people who hang out together just being amazed at how smart they are.

Seriously though, Cecil, what speed do you find CW comfortable to copy? Do you copy by hand on paper, or use the mill? A lot of ex military ops are so used to copying with a typewriter that during their formative years in the radio arts they got too deeply imprinted with the "hear the character, hit the key" method, and I guess this might be a stumbling block to head copy. Anyway, after 46 years, I guess you must have your methods pretty much ironed out, and have no need for the ability to head copy. Lack of a need to learn can be a big stumbling block. Still, I like to think that MOST (No not all) new hams can learn to head copy conversational Morse Code in less than a year if they are motivated and if they practice using proven methods. For many, (Myself included) this only takes a couple of months.

Funny thing is, I can't for the life of me copy anything over 30 WPM except WLO's WX broadcasts. Try as I might, there is a wall up there for me and I just haven't been able to crack it yet. Go figure. Maybe I AM doing it wrong HI.

3638. ARRL VEC CONTEST MID RESULTS

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-08 00:00:00 UTC
From: zeus98@my-dejanews.com
Message-ID: <6t3m15$p7m$1@nnrp1.dejanews.com>
Source record: 162310

ARRL VEC CONTEST

Early tabulations as of 09/06/98

Zeus98 has more results of the ARRL VEC HAM OF THE YEAR AWARD. These results are as of 09/06/98.

Walter WD4IUD still leads with 8484votes (what an increase over last tabulation) Manny W4SS is so close with 8181 votes that his hands are almost on his shoulders. Graf KG4U, 11 votes (must have found some new friends at the bathhouse)

ERROR ERROR ERROR ERROR ERROR ERROR ERROR ERROR ERROR ERROR ERROR ERROR ERROR ERROR ERROR

ZEUS 98 HAS MADE AN ERROR IN TABLUATION DUE TO DRINKING TOO MUCH VODKA. SORRY BUT I WAS SEEING DOUBLE

The corrected tally as of now should be:

Walter has 84 votes
Manny has 81 votes
Graf has 1 votes

There is still plenty of time to vote so DO IT KNOW.

Zeus 98 have heard rumors of voting fraud, if this is so; it may nullify many of these votes.

NEXT REPORT IN TWO WEEKS OR SO, FINAL DAY IS 10/01/98

3639. DC Power conversion 15 volts to 12 volts

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-08 00:00:00 UTC
From: jomurphy@plains.NoDak.edu
Message-ID: <6t3ii2qom1@node2.nodak.edu>
Source record: 162311
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,comp.sys.misc

I want to build an external transportable battery supply for my laptop computer. I have a rechargeable 15 volt battery from an old Motorala handheld 'brick' (was used in the old vhf mobile telephone service about 10 years ago). My computer input either from a power supply from the wall or from a car cigarete lighter takes 12 volts. Could I safely use this battery? (Probably not, so on to my next question---) I want to convert the 15 volts to 12 volts to safely use it. In my old radio building days (about 20 years ago) I knew there was a way to do this, but now I am not too sure how to use the Ohms's law to convert down. I do know it may only take a couple of resistors and maybe a diode or two (OR am I talking ancient equipment here????) Can anyone help me out with a circuit to do this? Would be appreciated!!!

BTW: For those curious, it seems my internal batteries are always giving my low battery indications after about 20-40 mins of use (even tho manufaturer suggestions say 1-2 hours. Tho most of the times I can use the power cord, there are times when it just isnt convenient to do so (like when I need to do some work and will only be on for about 30-45 mins).

Any help is greatly appreciated in advance.

You can either post an answser here, or (preferable) email to the following:

John Murphy
murphy@warp6.cs.misu.nodak.edu

The reason for posting from a different email is that the one I check all the time wont let me post to the newsgroups (tho I can read them). So I use a backup email address for this. Again, thanks in advance for any help anyone can give.

John Murphy

>touchy now bout hearing the truth? After all, ain't you the one who wrote,
>"I'm telling the truth and you can't stand it!"? I thought that was you who
>wrote that bullshit lie. Looks like you be the one can't stand the truth.

Truth and stumpjumper is definately an oxymoron. Coming from a moron named trench mouth it is a double oxymoron.

Case in point:
Illiterate trench mouth<6sulqq$a6a$1@nnrp1.dejanews.com>,
mastertrenchtick@hotmail.com makes a fool out of himself as always:

Even though you *might* be able to connect to the battery directly, the easiest thing to do is to use two power silicon diodes in series to drop the voltage by 1.4v to 13.6v, which is about what the car would provide when it is running. BTW most battery specs are made assuming the drives are powered down most of the time.

3657. Ohio QSO Party - Sept. 12-13, 1998

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-08 00:00:00 UTC
From: Nancy Rabel Hall <kc4iyd@nospam.geocities.com>
Message-ID: <35F56823.75974BB2@nospam.geocities.com>
Source record: 162329

Hello,

For you contesters out there, The Buckeye Belles, the Ohio Ladies Amateur Radio Club will be sponsoring the 1998 Ohio QSO Party. It will take place on September 12 & 13 and will coincide with the Belles' annual mini YL DXpedition to Kelleys Island, Ohio.

The following info is also available on the Belles web page: http://www.geocities.com/CapeCanaveral/Lab/3376/ohqso98.html

If responding to this email, please remove the nospam line in my email address. Contrary to what has been said, the last few times I posted to a newsgroup, I received tons of junk email, adding nospam to my email address, appears to have limited the junk email.

73 de kc4iyd, Nancy
kc4iyd@geocities.com

==========
The Main Rules

Eligibility: Any and all radio amateurs in US and Canada

Operator Categories: Single or multiple
Transmitter categories: Single or multiple

Start: Friday, Sept. 11, 8pm EST (Saturday September 12, 0000 UTC)
End: Sunday, Sept. 13, 8pm EST (Monday, September 14, 0000 UTC)

Exchange :
Ohio Stations: Serial Number/Name/County
Non-Ohio Participants: RST/Name/State or Province
Each serial number must be consecutive and start at 001. In other words, count your contacts. Multiple operators may use up to 5 letters in the name field of exchange acronym composed of the operatorsï¿½ first initials, if nonclub group. Single operators should use given name.

How to Participate:
Phone: Call "CQ Ohio Contest"
CW" Call "CQ OH TEST" or "CQ OH"

Hunting and pouncing:
Look for stations calling CQ as described above.

Lake Erie Islands
Ohio radio amateurs are encouraged to visit and operate from the Ohio Lake Erie Islands during the contest period. Since the Ohio island are somewhat rare on the amateur bands, particularly HF, special point can be earned by working them or working from them (see below). In addition, they will be counted as separate multipliers in the scoring process.

If your station is located on the an island, use OTEI if located on an island in Ottawa County (N. Bass, S. Bass, Marblehead, Put-in-Bay) or ERKI (Kelleys Island) island as country in CW. Use "Ottowa Island " or "Kelleys Island" on phone. Islands in other counties use OTEI or Ottawa Island. On shore Ottowa and Erie county station count as garden variety counties.

YL Bonus

YL Bonus. Because this event is deliberately concurrent with the Buckeye Belles annual mini YL DXpedition, a bonus will be applied for working OH YL stations identifying themselves as YLs anywhere within the state of Ohio. YLs are encouraged to mention this after their state for the purpose of this event. The first 10- YLs worked are multipliers, all other YLs worked count as a regular contact.

Roving Bonus

Roving Bonus: In order to ensure that there will be participating stations in all Ohio counties, operators are encouraged to operate mobile and/or portable. However, for safetyï¿½s sake, please park while operating or take along another person to do the logging. In addition, roving stations operating from more than four Ohio counties and/or operating more than one band (including VHF/UHF), may add 10%, for each HF band activated while roving.

Scoring.

Digital (CW, RTTY, Packet, etc.) = 2 pts per QSO
Phone = 1 pt per QSO
Ohio counties and first 10 YLs anywhere and on any frequency are multipliers with maximum = 100
(88 counties + OTEI + ERKI + 10 YLs)
Each multiplier may be used only once.

Out of state contacts: QSO points x 2
(Phone contacts with other states = 2pts,
CW/digital modes = 4)
See also VHF rules.

Special Island Scoring:
Ohio Lake Erie Islands are worth 5 points on phone, 10 on digital, and OTEI and ERKI count as separate multipliers.

Stations operating on Ohio Islands during the party may add 10% scoring bonus after the multiplier is applied.

Special VHF RULES apply to all bands above 30Mhz.
6m all modes follow HF rules (Remember, its the "magic" band)
2m CW and SSB follow HF rules
FM phone (except 6m)
2m and above : Contacts in same county, 1 pt per QSO; next county, 2 pts per QSO, etc.
Multipliers are the number of counties (shortest straight line) removed from your station location. E.g. Working from Franklin County to Franklin County = 1 pt, Franklin to Delaware = 2pts,. Franklin to Marion = 3 pts. Contacts with counties in adjoining states, PA, WV, KY, IN, MI, follow same formula. ALL QSO Party contacts must be SIMPLEX (and on frequencies consistent with ARRL band plans) and must be point to point; no relays. Soliciting of contacts over repeaters is okay if repeater sponsors approve but actual QSO must be made on recognized simplex frequency.

DO NOT USE 52.02, 52.04, 146.46, 146.52, 147.555 or 446.00 MHz for contest QSOs.

Packet: 2 points per 2 way contact. Digipeaters are okay. All contacts must be in real time, keyboard to keyboard. Serial numbers must be used on all contacts, VHF, UHF and HF must use same series, eg if you make 56 contacts on HF then switch to 70cm, then first QSO on 70 cm will be number 57.

Operating Guidelines:
--Stations may be worked once per band per mode.
--Separate logs may be submitted for digital/cw and phone contacts. The digital mode includes CW, RTTY, Packet and all other non-speech modes. The phone mode includes AM, SSB and FM.
--Dupe sheets should be submitted for all stations submitting more than 200 contacts.
--Each participant (group or single) may have up to 2 transmitters operating on each band at the same time (one voice, one non-voice). Once contact is made on a band, the transmitter is committed to remain on that band for the next 5 minutes. In all cases, respect FCC rules (part 97) and ARRL band plans.

LOGS MUST CLEARLY INDICATE TIME, FREQUENCY AND MODE

Rovers and portable MUST also indicate county from which QSO was made.

After the contest ends, send logs and claimed scores to:
Buckeye Belles
1998 OH QSO Party
4441 Andreas Ave
Cincinnatti, OH 45211

Entries must be postmarked by Oct. 17, 1998. Also, include any comments about how much fun you had or suggestions for the next QSO party. Its bound to be fun, so join us on Sept. 12-13, 1998 For the first Ohio QSO Party in who knows how long!

> SKILL ON THE AIR.

Agreed, and well put. Apparantly it is a big accomplishment, and a lot of
those who do accomplish it will most likely put it to some use. (yes some
won't.... but many will)

> You WILL find CW a lot more fun when you get up to 15-18 WPM. That is where

> lot more enjoyable.

Yes. If you enjoy it and want to get better at it, by all means, indulge.
However, beyond a certain arguable minimum, should we really tie CW
prowness to expanded phone band privileges? How about linking it with
expanded CW subband privileges? Should not the CW tradition in ham radio
be strong enough to stand on its own?

|> Well, I guess the question of why comes up.
|> If you want to transmit on Police frequencies, you first have to know
|> what the frequencies are!.

Not hard to find. Radio Shack sells guides listing the frequencies and
often will have a free photocopied list of local police frequencies.

|> You then have to get a commercial radio which can cost in excess of 2
|> thousand dollars. Then find someone to program the radio (good luck
|> :-)).

Many ham radios can easily be modifed to xmit on these bands. Instructions
are available on the internet, and may involve minor soldering or just
cutting a wire on some older radios. Radio price ranges $200-800 new,
less used.

|> Even after that, get ready to spend thousands on Lawer fees, and/or
|> Fines, as it is VERY illegal to own a radio that will TX on police
|> bands ...

I don't think it's illegal. Citations of relevant laws to the contrary
would be appreciated. However, even if it is legal, you can be
harrassed, prosecuted, and/or have to spend thousands on legal fees even
if you are "right." You can also lose in court even if you're right.
Big money and connections often speak louder than the law in court.

|> ... and even more illegal to do it!

I agree it's illegal except in emergencies, and risky even then for the
risks cited above..

I think it's also (excluding emergencies) illegal to use a modified
radio to transmit on police (or anything but ham frequencies) freqencies
even if you are licensed to transmit on those frequencies. The FCC
generally requires some form of approval of the radio for the specific
frequency used.

This is no longer humorous. It is, if anything, sad.
I have had private e-mail messages with the trench tick and he is a
very intelligent, erudite man who composes coherent, grammatically
correct paragraphs - complete with perfect spelling.

He apparently is well-read and knows much about many things - including
"Jewish" languages such as Ladino and Yiddish.

In my opinion he enjoys putting folks on and down - especially egging
on other readers of r.r.a.m.

Again, I repeat, this is sad.

Jim - thanks for your thoughtful reply.

When replying to someone that mentions the code - first attack him for being a lousy no code tech (even if you don't know if he has passed a code test or not). Then proceed to diminish his credibility by chiding him for mentioning a technology that ham gear makers have not yet embraced.

Always move the discussion from the technical merits of one mode or another to personal attack, always.

Your one mistake however, Jim, is assuming that the person you attack actually gives a damn about what you have to say.

Have a nice day.

Forgot to mention that my cordless phone actually operates in the 900MHz ham band. It is a fine example of a mode that makes efficent use of spectrum and is capable of sharing the band with hams who use somewhat less efficent modes, like CW, SSB and NBFM.

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-08 00:00:00 UTC
From: larton@garlic.COM
Message-ID: <35F4C76E.5B44D3C5@garlic.com>
Source record: 162336

FOR IMMEDIATE RELEASE

Contact: Dave Larton N6JQJ (408) 778-7265
Deputy State ACS Officer (408) 778-3101 FAX
Telecommunications Unit larton@garlic.com
Information Technology Branch David_Larton@oes.ca.gov
Governor's Office of Emergency Services
State of California

1998 SOUTHERN CALIFORNIA ACS EMERGENCY RESPONSE INSTITUTE COMES TO RIVERSIDE

You and your organization are cordially invited to participate in the Southern California ACS Emergency Reponse Institute, October 10-11, 1998 at the Ben Clark Public Safety Training Center in Riverside, California. This year's Institute is sponsored by the Governor's Office of Emergency Service's Auxiliary Communications Service, the California Emergency Services Radio Association (CESRA), and the Riverside County Fire Department. This is the first time since the ERI was founded in 1987 that the Institute has come to Southern California.

Featured classes will explore the theme 'D2K: Dealing with the Disasters of the Next Millennium', and will include instructors from throughout the state of California. Scheduled classes include:

-- Communications for Urban Disaster Response
-- Seismic Design Considerations for Communications Systems
-- Chemical (Chemo) and Biological (Bio) Domestic Terrorism
-- Near Vertical Incidence Antenna Systems for Statewide or Regional HF Communications
-- Satellite Communications for Linking Statewide Resources
-- Stress Management in the Wake of (and During) a Disaster
-- Dealing with Potential Collapse of Public Telecommunications Systems
-- Standardized Emergency Management System (SEMS)
-- Incident Command System (ICS) Orientation
-- Hospital Disaster Support Communications System (HDSCS)
-- Military Affiliate Radio System (MARS)
-- Civil Air Patrol (CAP) Communications

Established in 1987, the Institute has trained hundreds of emergency communicators, coordinators and managers in the demands of emergency services during a critical incident. The Institute invites volunteers and paid-staff from all organizations and agencies having an interest in promoting better emergency services operations. Networking among and between attendees and agencies is encouraged.

To register, you may:

(a) Visit the ERI '98 Home Page at http://www.qsl.net/races/eri
You may download our registration form and mail it back to us. The
Web site displays more on the ERI program, as well as local lodging
information and a background on the Ben Clark Training Facility.

(b) Email us at kbourne@earthlink.net for a registration information
packet.

(c) Send a $35.00 check to: ERI '98 200 E Del Mar Blvd Suite 300
Pasadena, CA 91105

Seats tend to fill fast at the Institute, so get your $35.00
registration
in early so you don't miss out. Make out checks or money orders to ERI
'98.
Questions? Contact Institute Public Information Officer Dave Larton
N6JQJ, at (408) 778-7265, by email at larton@garlic.com, or by fax at
(408) 778-3101. If this invitation is being sent to an organization,
please give this message the widest possible dissemination. Thanks!
See you at Institute!

Never mind all this math jazz. From one who has been there let me tell you that using an american 60 hz xformer on 50 hz is asking for trouble.

I lived in Jordan for 2 1/2 years. The major concern people had - was the failure of american equipment designed for 60 hz and operating on the local 50 hz system.

So play with your math but don't take american 60 hz equipament into a 50 hz country.

You know what is great about morse code? It is the first digital means of radio communication. But if communication is your goal what's the difference between 1100, ..-- or 'A'. The only difference that I can see is the discipline used to send and copy morse code.

Why would this ham type out morse code that bashes an organization full of people that can read it and know how to spell "cry".

By the way if you do not know how to read code the following is what the morse code says.

"Tell the arrl to go to hell. save cw no code cky babies die"

I do not feel this way, I want the ARRL to fill the airwaves with new hams ones that will stand up and contribute to the hobby that they feel is valuable. I do not think the attitude this ham conveys, one that bashes the only organization willing and able to defend the threat to our bands, is valuable to amateur radio . This ham needs to read a bit more about the the little LEO's, the FCC mandate to make more spectrum available or the FTC's mission to grow the communication industry.

Moreover, If you are a new ham you are a real ham, your ticket says so!

What was the failure mode? Let me guess - burned out transformers!

Well, take equipment that is running pretty close to the limits, add the
daytime temperatures in Jordan, and drop from 60 to 50 Hz.

Actually, I'd bet many would fail from the first two. Add the third and
you've got toast.

You are absolutely right. Won't work.

> something that doesn't make you feel so uncomfortable. I pity you.
>
OK Mr. Mouth. Lets look at this statement. My first post addressed a
claim--
not by you--that it couldn't be established that the jammers where HF
licensed operators. I took issue with that statement and you entered the
thread
with personal insults directed at me. You told me how much I didn't know
about amateur radio then let loose with a string of invective indicating
that
I was unable to upgrade. I gave you hint after hint but you continued. Then

obvoiusly you discovered your error so the tune changed. Now you had to upgrade to extra or you were lazy and worthless. Does this go for your Dad the Tech+ or is there a family member exemption.

If you sir, wish to debate the original issue, that of how jammers can and have been indentified, I will endeavor to educate you. But if the real issue
is the defense of an untruth--code is a filter--then there is no more point

in discussion.

Knowing full well your response will be a lot of sniping and then the insults
will start I guess this will be my last post on this subject since I require to
be insulted by a peer before I respond again.

Jerry

Adios take your medication

Hi John,

With no knowledge of commercially available DC to DC Converters manufactured for you application I suggest the following:

Go to your local public library and look up ARRL publications.

The Radio Amateurs Handbook has a chapter devoted to power supplys.

There is a section of this chapter that gives the info you desire called "DC TO DC' converters.

I would suggest that you follow this circuit shown with a 3 Pin 12 Volt regulator circuit also shown in this chapter.

Anyone know of a commercially available 12 vdc to 15 vdc converter??

You have not practiced to fluency, which takes lots of
listening. You
tend to want to do all the talking. No surprise that you haven't
accomplished
code fluency.

Gee. So you have an aptitude for strange and convoluted mental
exercises, which is exactly what a Mensa test consists of. To
most
people they're an exercise in inanity.

The MX was a good radio in it's day. Get something newer. Like the Saber, MT-1000, MT-2000, or HT-1000. Field programmable (Keypad) units include the JT-1000, GP-68, and the AP-74. Proms for the MX are high, and hard to have programmed in many areas. I have, or have had all these radios at one time or the other, and used them for mixed service usage. IMNSHO. Bill

And the reason you can't dunk a basketball is that you
have not practiced enough. No amount of practice is
going to increase my buffer memory capabilities, Dick.
Everyone has a limit. Mine is 3-4 characters. God
engineered me that way. It's not just Morse code. I
cannot remember a telephone number if it is given to
me verbally. I cannot recognize a word if it is verbally
spelled to me and is more than 4 letters long. After
5 characters, I forget what letter the word started with.
No amount of CW practice is going to overcome that
biological limitation just as no amount of practice at
dunking basketballs is going to overcome your biological
limitation.

Everyone is NOT like you, Dick. You have your God-given
talents and I have mine. If 47 years of practice doesn't
lead to fluency, I ain't never gonna be fluent. I have
practiced as much as 15 hours a week for weeks on end
and my buffer memory is still limited to 3-4 characters
just as it has been since birth.

The Murgas ARC will once again operate K3YTL during the 1998 September VHF contest. The contest runs from Sat Sept 12 at 2 PM to Sun Sept 13 at 11PM.) The location will be FN11uh and the entry will be the limited multi variety(6m-440 SSB, Cw, and FM.) We will be calling CQ continuously and schedules are readily taken, since all stations are interconnected.

2m FM on the hour after 5PM Sat(146.49 try first.)
6m FM 52.525
223.5
446

The last 3 monitored continuously, give a holler. All you need are call and grid. If unsure of grid give op your location and we'll assist.

We usually run up to 24 GHz, but unfortunately we are suffering from a lack of participation. That is why contacts are crucial. Please turn on the radio and work us. Thanks a bunch. Most importantly, have fun!!!!!!!!!

This is a troll, right?

Everybody knows that Motorola software is proprietary, and the
license pretty much requires that you be a Motorola dealer to legally
use it. And that's the same in Israel as in the U.S.A.

However, your "aa@aa.aa" address suggests that you may not
be from the same planet -- and I am not aware that Motorola
has licensed any non-terrestrial service providers.

So for you -- the answer is "You can't get the software."

Hi Bob,

There is no problem using that radio in the amateur bands. US regulations allow an amateur to use virtually *any* radio in the amateur bands, subject of course to the usual power output and signal purity issues.

Be careful, however, that he doesn't make any modifications to get it into the amateur bands, because modifications will void the type-acceptance for the marine band usage.

>Ops complain of mushy receive pushing above 40WPM.

Yes, it still has a SNR advantage against SSB phone at 75 WPM, but there are
so few operators who can do Morse at 75 WPM that the point is moot. And there
are a number of currently used digital techniques which blow CW out of the
water for both throughput and weak signal performance.

>BTW, anyone ever hear what happened to companded/locked SSB? Sounds like it
>would do the trick for pushing phone through RS15. Gary?...:-)

ACSSB is pretty much a dead horse. It offers very little benefit to the trained
operator. Its real claim to fame was that it didn't require the naive user to
tune it in carefully, IE it works much like NBFM as far as the user is concerned.
The compandoring gains a bit of SNR, but it isn't really significant. The routine
use of speech compression and a trained ear with ordinary SSB is as effective
in a weak signal or high noise environment.

The LM338K Three terminal adjustable regulator will, with proper heat sinking, provide up to five amps of current. The external components required are minimum, and it is a simple circuit to construct. The data sheet available from most vendors has a suggested circuit. This would work great for you, with the added value of being able to power 9v and other levels.

3708. FCC GROL & Amateur exam practice site

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-09 00:00:00 UTC
From: Simon Twigger <simont@mcw.edu>
Message-ID: <35F6BEB2.9CBC3AC0@mcw.edu>
Source record: 162207

Hi there,

I've recently added the Commercial Radio Exam elements 1,3 and 8 to the existing Amateur Radio exam practice page. Elements 1 and 3 are for the GROL (General Radio Operators Licence) and element 8 is for the Ship Radar endorsement. These exams can be practiced on-line so you can see what's involved and practice for the tests,

This is a new addition to the main site which currently provides practice for all the amateur written and code exams, a java applet you can use on-line or download for use at home or on your own website to practice the written exams, exams by email (request and receive generated written tests for practice away from the computer or for use in your club's licence preparation class). You can also save your exam results to track your improvements and help you concentrate on your weaker areas.

Amateur exam page:
http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

Commercial exam page:

I am trying to track down my Grandfathers amateur call sign that he had sometime during 1950-1971. He also had a call in the old 11M CB band.

His old 11M ticket was KKD4018, I am trying to find out what his amateur call was.

His name is John O. Sickles from Oceanport, NJ. If anyone has a callbook that has a listing, I would appreciate the information.

Thanks in advance for your help.

3713. 2 pwr supply question?

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-09 00:00:00 UTC
From: GREGORY HEATH <kb2qqm@email.msn.com>
Message-ID: <OdFHgSC39GA.240@upnetnews02.moswest.msn.net>
Source record: 162212

I have two pwr supplies. One is a Lambda power supply that puts out about 16 amps, and the other is an Astron. Can I wire them in Parallel to give me a higher amperage? My supply requirements are higher than either of them can put out. Would combining them produce any problems? I am trying to save a little money over buying a bigger supply. The Lambda puts out 16amps, and the Astron puts out 16 constant and 20 amps intermittant. Thanks for any answers. Greg

I am new to the Nashville area and am looking to get either a 2m or 440 rig
or maybe even a dual band if there is enough traffic up here.
Are there any clubs or groups up here to help get me going?
Thanks,
Alex

Try ARRL HQ at (860) 594-0200 or hit their web site at http://www.arrl.org.
I think QRZ has a listing of clubs at their site also:http://www.qrz.com.
Good luck and Welcome!

Hello,

I am going to our club's Novice/Tech class, in which they said they will emphizse more on CW this time around. I would like to upgrade my liecense soon, at lease 5wpm or 13wpm. My probelm is that I tried for 6 years now, but can't seem to get past a certain point in the code, say up to a certain letter, then get stuck and get confused.
I have the ARRL tapes, Gorden West tapes and several CW programs including Super morse. I know of several programs like Code Quick, but not really willing to spend the money on them. I you have a used copy to sell me, I'd consider it.

Thanks for reading this, Any help is welcome.

Two identically regulated power supplies, yeah, sure. Two different ones,
well, let's just say you may want to have spare fuses handy, especially with
a rapidly fluctuating load as with a CW transmitter.

Anybody know where I can get/read Fox Tango Newsletters. I have a Yaesu FT101F and any info/tips on this thing would be great. It's a bit old, needs alignment and has recently developed a problem on 10 meters (Very Low power Out 8 watts). Power out is OK on 15, but seems to be getting lower and lower. Power
out is normal on 40 and 80 meters.

There is a link at my site to a website that is pretty close to the last word in the methods of learning the code that work for most people. Also, read carefully the Supermorse documentation. There are a lot of hints there to make your study easier. There are really a lot of ways to work out with Supermorse or any of the other better code tutors, like NuMorse.

Best advice I can give is go heavy on the Farnsworth method. Set your character speed at 18 or 20 WPM, and word speed at whatever your immediate target speed is. You GOT to get used to hearing the sound of the character as a whole unit, and not as a collection of so many dits and so many dahs. 5 WPM standard timing Morse Code encourages the student to count the individual dits and dahs, since it is slow enough to do so. This is counter-productive. Also remember that the ARRL VEs and indeed most other VE teams use 18WPM character speed on the 5 and also the 13 WPM exams. This is a proven method that is far superior to learning first at 5, then 13, then 20 WPM standard timing. It even sounds better to most of us, though it gives most computer programs fits when you try to copy off the air with your computer.

You seem pretty well motivated, Lloyd... so re-analyze your methods, adjust as necessary, and don't give up. You have the tools you need... it's just a question of putting together the methodology that works best for you, using what works for others as an initial guide.

Hope this helps.

Was out West and down South, myself. Had my tech schooling at Sheppard. Then on to other assignments. I wonder what they did with the Rockwell/Collins 28U10 10, 000 watt transmitters they were using at MacDill. Now, there would be a signal on 3901 heh heh. Most of their hardware was built in 1969. So I had newer equipment, at least until I got out in 1977. You could xmit from the SCOPE Control console on about 30 discrete frequencies plus control the station's RTTY receivers.
Of course, there was the phone patches to autovon. Now, I think they've planned to run them remotely, from what I've read. Boy, after 01 June 1992, the USAF was restructured, and it isn't the same as we knew it.

3731. Dual-Band Antenna for 96 Vette (Glass)

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-09 00:00:00 UTC
From: kriss@spec.com
Message-ID: <kriss-0909982100590001@netserver1.spec.com>
Source record: 162230

I just traded cars and now have a 96 Corvette and would like to install my old Tucker (out of business) thru-the-glass antenna. The problem is where to get re-install kits.

Any suggestions?

Dick, KD5VU

kd5vu@spec.com

Yes, of course. The best set the Marine Corps ever had. I used to sit in Okinawa and rag chew with my wife in Utah (CW of course) with a 500' kite antenna, on a daily basis.

E-Mail me your phone # and I'll call you. I have manuals, spares, PS's, ant's, mic's, phones, and etc..

Jeff:

I did not start this thread. If you would carefully read my post you would see that I am not anti code. I simply pointed out that there may be more efficient means of communication than CW.

Sorry I bothered.

The MX-300 series would be a good choice. I used to work on them when I
was at the Anniston Army Depot. They had a programable chip that was
burnt by a outboard unit. I have no idea about availability. Maybe
this will point you in the right direction.

Well the problem with the flame bit is it is just too quick. Tick's need
to be properly elliminated. Kinda like a attitude adjustment, if you know
what I mean.

Im kind of disapointed, but your probably right. Now that they are confined
to this thread ONLY. The don't have the ability to destroy the NG, which
is what their intent is. Come on CB Rambutt and Trench Tick, show us you
got some balls.

You might have jumped to an incorrect conclusion, PW. From the
time your CC number left your computer, any one of a thousand
different hackers could have intercepted that number. I just
made a book order over the GPO's web site; at least twice
a warning appeared stating that the link was not secure
and I was using the web site at my own risk.

Welcome to on-line purchasing!

I don't know. Human speech runs about 150 WPM, we are not really not
talking apples to apples but taking in what I have heard, CW at 150 WPM
would not offer much in SNR ratio.

3742. Radio Shack Scanner Pro 2040 Intermode Problem

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-09 00:00:00 UTC
From: "McKay Family (KA7IVJ)" <Thule-APJ@postoffice.worldnet.att.net>
Message-ID: <6t4mou$mld@bgtnsc02.worldnet.att.net>
Source record: 162273

For some reason I have a Intermode/Interference problem in the 854 to 856 area which I am monitoring using my Radio Shack Pro 2040. The interference is telephone transmissions on top of the other transmissions. When the frequencies I am listening to, are transmitting, by them selves they are ok. But, when a telephone comes on line it blocks out what I am listening to. Also I have to keep the squelch almost wide open to get a good signal. Regardless of what type of antenna I use it does the same thing. There is a telephone couple cell sites approximately 1 mile from us in any direction. Is there a filter I can install or anything else to block out the telephone transmissions or anything else i can do? Any ideas. Thanks, Bob

Well, you have a big choice.
Many and most models will do Ham bands.
You can spend anywhere from $300 to $1500.

I.E.: Saber, Jedi series (HT1000, JT1000, & MT2000) GP-300, Visar, P200, MT1000
Many, Many more.

Aftermarket Cables range from $30-$90 depending on what model and where you get
it.

Aftermarket Rib box, Approx - $70 -$200
depending where you get it.

You are looking for what's called a UHF Low split for UHF or
A Standard VHF would work for VHF

Chris

PS, No disrespect to another post but I would stay away from a MX300. It is old
technology and an outdated radio (Big as a brick)

3751. Re: DC Power conversion 15 volts to 12 volts

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-09 00:00:00 UTC
From: richg@one.net
Message-ID: <35f5e145.48475229@news.one.net>
Source record: 162282
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,comp.sys.misc

If you were talking about a Ham rig, I'd have all kinds of
recommendations. For a laptop, I mostly have questions.

First, I'd verify what the computer really needs. What does the
manual say? Does it run directly off the cigarette lighter socket?
When you're talking about automobile batteries and systems, 12 volts
is not exactly 12 volts.

If the computer will run off the cigarette lighter while the engine is
running, then your "15-volt" battery may be fine as is. Auto ignition
systems commonly run 14 to 14.5 volts when the engine is running.
Long after you've shut the engine off, the battery settles down to
anything from 12.7 to 13.2 volts. So "12 volts" is a nominal value
at best.

If your 15-volt battery is indeed 15 volts and your computer indeed
needs 12 volts, then the safest way to connect the two may be to use a
3-terminal voltage regulator. Several kinds are available that have
different current capabilities. 12-volt, 1-Amp regulators are easy
to come by, and the mail-order houses have them up to 3 Amps.

One regulator will provide reliable 12-V output with no additional
components.

But first try to determine what voltage and current you really need.

This is a plug for K8VO's Stumpjumpers ate my balls web site.
It is hilarious! First, we see KV4FZ, looking like Adolf Hitler's stepchild, on trial, and dodging questions.
Next who should we see but the Stumpjumpers' version of the "Gixie twins" <Glimmer Twins>from Memphis in those inane BARF hats. Polly, W4FQF, <Jagger>, looks like his face got caught in one of the washing machines he serviced.
Ashley's jowls are reminincent of Nixon's, and has no room to cast aspersions on others. Oh, that's not jowls, those are his ears!
And next to him, , is Polly's reach-around man, Billy Jack, W4LLI <Richards>. Billy Jerk looks like death warmed over, and makes Keith Richards look like a vogue model.
Last and most certainly least, we see ND8V, the human garbage disposal. Fat boy Mike has as many Chins as there are in a Chinatown directory. And, no, stupid stumpjumpers, this is not some kind of racial slur, Chin is a common Chinese surname, like Jones or Smith is here.

For a good laugh, check this site out!

OK, but does CW offer a better SNR to phone at this point? I have heard CW Ops complain of mushy receive pushing above 40WPM.

BTW, anyone ever hear what happened to companded/locked SSB? Sounds like it would do the trick for pushing phone through RS15. Gary?...:-)

heh heh, I thought you'd recognize it. I still listen in to it. Except now, it's SCOPE Command. You can catch it on 4274, 6712, 6739, 8968, 8992, 11175, 13200, 15016 and 17976 all USB. I was sad to see MacDill secure from the net last 01 July 1998 at 0000 Zulu. Since they've lost Albrook and Bayonne previously, it was a surprise that they shut down MacDill Global. Good old "Giant Talk," it'll be missed.

>> where an amateur filed suit against the FCC?
>
>Really Michael, sure I do. I carry those around in my shirt pocket
>just incase I meet some idiot like you demanding "legal" proof of every
>thing I may say.

Well, Ed, if you don't have "proof", don't make a statement of fact. Make
a statement of opinion. Had you said 'I feel the liklihood that anyone on
the bands would be prosecuted based upon what the ACLU has done in the
commercial radio arena", I'd probably agree with you. But, you didn't do
that. You made a statement of fact, claiming that the ACLU has been
instrumental in controlling behaviour of the FCC WRT the amateur bands.
I asked for proof. If you aren't prepared to provide it, don't post it.

Oh, and I must say, Ed, I am very disappointed with the "idiot" comment. Are
you going to start stooping to the level of your comrade, Carl Stevenson,
and start insulting everyone you disagree with? Just curious if this is
the kind of behaviour we can expect from you now, Ed D USA Ret.

>Grow up and get real Michael, This is no court of law
>and you will never be a lawyer, at least not in my life time.

Since you don't know what my educational background is, Ed D USA Ret, it
might not be a good idea to make statements like this. But, you are
right about one thing, I never will be a lawyer, because I find lawyers
perhaps the most despicable people on the planet -- besides people trying
to weasel their way out of a code test using a fake "disability", that is.

>This is
>Stinking News Group, and here we offer up opinions, at least some do.

Just make sure you phrase your opinions as opinions in the future, Ed.
Then we won't have a problem, will we?

>Others like yourself sit there and Demand Proof citing numbers ect. How
>small your mind is becoming. Go back inside and play with your dolls if
>that is all you can come up with.

More of this doll stuff, Ed. Geeze, why do you care what I play with, Ed? What business is it of yours?

>Shouldn't be an issue? Shame on you Michael, you have now joined a very
>select and growing group that believes free speech comes without
>responsibility to those around you and in this case where ever that
>signal may land.

Huh? You're stating a non-sequitur, Ed.

>My statement suggests that the FCC has given up on
>trying to attack vulgar and obcene language on the air because Judges
>all over the land continue to throw the cases out. ACLU lawyers are
>lined up 6 deep (ill send photos to confirm soon) to defend these pieces
>of trash. Therefore, as I stated, you have to be guilty of something
>like out of band, (over the edge even unintentionally works) which we
>all know is so much more disruptive than the trash that is now condoned.

And my statement was that if these operators are so 'bad', I'm sure there is a lot more that they can be cited on, such as causing intentional interference. The content of their transmissions would not even have to be an issue at all, thus eliminating your hoarde of ACLU lawyers from attacking (unless they wanted to claim that intentional interference is a form of free speech.)

>> >One, if a filter only kept out 100 over 500000 and also kept out the
>> >numbers of good people we know of then maybe the cost is too high for
>> >the return. That is my contention.
>>
>> There is no evidence to suggest what the number of "good people" (what
>> defined a "good" person?) are that are 'kept out' is.
>
>So you believe the concept that from 100 people randomly selected in
>this country, more would be bad than would be good, and you define both
>elements please, so I may judge your objectivness here. I happen to
>think otherwise.

Depends on what your definition of "good" is. If you're just looking for a body to 'up the numbers', I'm sure anything short of a corpse would suffice. Can you answer my question as to what is a "good" person, as you claim are being 'kept out'?

>Then that makes them double offenders. But if you run out of band, what
>dif does it make if you use a little more pwr//? The statement is to

I have IC-31a that I am given for work to use in case of emergency and need to see if it can be modified to transmit in the 450-460 range. This is where my security team freq.. are. It receives here fine. ICOM tells me it can be done but will not do it or tell me how. Our company has the frequencies licensed to us and I have a copy of the licensee. If any one knows of the mod to do this please e-mail it to me or let me know where I can get it. Will the ic-32a mods work ??

True most of the time you don't get hit with a fine , but the rules are strict about spurs etc.
It is possible to get hit with a fine if the spur causes some real problems , like a leak at 121.5 mhz for an example.
But the point was about the level of strain . looked to me like the flames where about to cloud the issues, and cause some hate of other guys point of view. It is a hobby not a job.
if it all went away tommorow it would be missed but not many hams would starve for lack of work. the point is hobbies should be fun, not a source of high blood pressure.

3763. SATELLITE SOFTWARE - HOW IT CAN HELP YOU!

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-10 00:00:00 UTC
From: emanuel.marques@NOSPAMmail.telepac.pt
Message-ID: <35f84ea5.29376086@news.telepac.pt>
Source record: 162094
Cross-posted to: rec.video.satellite.misc,rec.radio.amateur.space,rec.radio.amateur.misc,rec.radio.amateur.equipment

Many people don't know that the right software program can be of great help, even for the non professional dish installer (DIY). Others are reluctant to use satellite software because they think it's too complicated to use or even useless.

This is not a FAQ about satellite software, but an attempt on my part to try to better inform potential users about the benefices of using satellite software.

I. WHAT IS SATELLITE SOFTWARE?

II. ABOUT SKYSOFT SOFTWARE.

III. IS IT USEFUL FOR ME?
A) I AM A PROFESSIONAL DISH INSTALLER.
B) I AM NOT A PROFESSIONAL.

IV. SKYSOFT SOFTWARE AND OTHERS

I. WHAT IS SATELLITE SOFTWARE?

There are several types of "satellite television software". Some are dedicated to help professionals and DIY dish installers to setup satellite systems. Others are meant to emulate viewing cards used by encrypted channels. Another more recent type of software is meant to replace the original software of some satellite receivers in order to add new features.

II. ABOUT SKYSOFT SOFTWARE.
Skysoft is the name of my project dedicated to satellite software tools. I am only interested and dedicated to developing engineering software (dish aiming , downlink budget, etc.).
Currently I have three software programs available; EASYSAT, PCSAT, and ARQSAT.

You can find more information about Skysoft and the software at:
http://www.sat-net.com/skysoft/

III. IS IT USEFUL FOR ME?
A) I AM A PROFESSIONAL DISH INSTALLER.
The true professional plans receptions systems. It is hard to imagine someone doing all the required calculations one by one. Nor is it acceptable to use the trial an error method or go by the word of mouth to determine minimum dish size, for example.
A good software program can save you time and money!

B) I AM NOT A PROFESSIONAL.
If you are planning to buy a satellite system EASYSAT (just 25 USD!) can be a great help:
- Find what satellites you will be able to aim to.
- Find what satellites/channels you will be able to receive.
- Find the optimum dish size for your location and for the channels you want to receive.
- Help you better understand how satellite television reception works, and how individual components and parameters affect system performance.

If you already have a satellite dish system:
- Help you diagnose reception problems (satellite signal is too weak, dish is to small, deficient dish aiming, etc.)
- Help you decide on equipment upgrades (how much bigger the dish should be, will a lower noise Lnb "do it", etc.)
- Help you better understand how satellite television reception works, and how individual components and parameters affect system performance.

IV. SKYSOFT SOFTWARE AND OTHER SOFTWARE PROGRAMS.
There are other software programs that perform similar tasks, in what ways are EASYSAT and PCSAT different?

Being a long time user of satellite software myself, I have found that available satellite software falls into two categories:

1) Programs with many functions, but unfriendly and too technical for most users.

2) Programs easy to use, but with few features, "over simplified", and easily outdated. These are usually free programs sponsored by satellite equipment manufacturers and therefor are designed to work with only a particular brand of equipment (dishes).

Having practical knowledge of satellite systems design and installation. I have been integrating really useful functions and features to my software programs. Some of them are exclusive of my software, which makes them arguably the most user friendly and useful software for the typical professional and DIY installer.

For more details, please go to the Skysoft Web Site at http://www.sat-net.com/skysoft/

Mike, how much would Reddy Freddy charge to help you update the 9 club call signs for which you are trustee for with your current callsign and address?

As busy as you are, it might be worth it.

Brian/N0iMD

> I asked for proof. If you aren't prepared to provide it, don't post it.

Michael, the ACLU is instumental in influencing the behaviour of the FCC
wrt procecuting and or not procecuting. I offer no proof and if you
need some so badly go get it. Prove it false little man. You make the
rules here as to what is said and how it is to be said? I hardly think
so, so stuff it. You claim to be so inteligent, Why do you think the
FCC gave up? No you don't need proof, just an honest thought if
possible. For the record, I consummed many cups of coffee with the
Engineer in Charge, my district and such conversations were lamenting
exactly what I have stated in past posts. Stand by for a copy of the
tape Michael, you must know I taped the conversation.

>
> Oh, and I must say, Ed, I am very disappointed with the "idiot" comment.

Don't be Michael, every once in a while you act like one and someone
will tell you so. Don't give me that holier than thou crap little man,
it so becomes you.

Are
> you going to start stooping to the level of your comrade, Carl Stevenson,

> and start insulting everyone you disagree with?

If I do it will be in direct retaliation to your irresponsible posting
Mr D. You get what you post here and you should know that by now. You
have no case so you start going after this word that word or some little
insignificant nothing, rather than address the truth and you do it
often.

Just curious if this is
> the kind of behaviour we can expect from you now, Ed D USA Ret.

You will never know what to expect from a man Michael, they are usually
in tune to the situation and flexible enough to meet any new challenge,
which of course you are not. A Challenge that is. You are so
insignificant that it is boring being the designated Rebbutering guy,
but someone has to do it and I am dedicated.

Keep your eye on my behavior tho because it is so impoortant to you. Oh
BTW I never insult anyone. It is not an insult to refer to an idiot by
his character name. You quit acting like one and you will not be called
one. Understand Michael? Knock off the cute little girl stuff and you
can join the ranks of men again. You might want to loose the WE stuff
there too as it is only you and me in this conversation and you nor I
are Royal.

Ed Consider yourself Rebutted

The Stones River ARC website which includes the World's Largest YL
Page (over 140 links) has moved. The new site is located at:

http://www.members.home.net/srarc

This is an extensive site with a little something for everybody,
including all original graphics and music on most pages.
Come see us, it's a great place to spend the weekend.

Hello:

I want to get a amateur handheld for personal use. Is there anything I should know before I get them. My wife would use it also. She is currently pregnant. Is there any precautions?

My friends told me that the Family Radio Band are weak and I should just get a amateur radio instead.

Please cite appropriate statutes. That you make it illegal for my wife
to go out and buy me a new FT1000D. I don't think so

It is not illegal to be in possession of which you speak. I had ham
gear 3 years before I was originally licensed. It's illegal only if you
USE said equipment.

It is not illegal to monitor police frequencies, unless you use that
information in the interference of offical business. IE: I overhear on
my scanner that the DEA is about to raid the O'Grady house in 5 minutes
and all units standby. I then phone the O'Grady house and tell Barry,
"Hey dude, the fuzz is about to bust your butt, ditch the drugs" Barry
does so and it is found that I tipped him off. I would be up the
proverbial creek for that.

Oh yea, him. Ask Lennie Nocalls aka No CW Testicles about him. Lennie's
a personal fan of him. Has to be, Anderson seems to refer to him
whenever someone disagrees

I guess you'd have to expect that from someone who hasn't yet realized
the world is passing him by and could care less about his military
exploits.

For 4 years but traded E6 for Warrant Officer. And the answer for the first question may be yes, but doubt it, I have not made a point of listing them and I detest dejavu anywhere. BTW, does my sentence structure relate to my status in the Military in some way? Entirely possible as I had to finish HS in the Army and everything else that I have as education came the same way. Guess it shows eh?

I don't think so. Maybe thats because at my home while growing up, we
communicated on ham bands long before we had phones of any kind. To be
tied to a wire or a Cell is not the same as the freedom of Radio as we
talk about here. I have no doubt some great stuff is coming but if
everyone has one where is the magic? Don't give in Michael, keep your
real RF gear.

>Not hard to find. Radio Shack sells guides listing the frequencies and
>often will have a free photocopied list of local police frequencies.

Yes, but those guides don't list the input frequency, or the CTCSS tones,
which are both required for almost all police systems (using repeaters).

>Many ham radios can easily be modifed to xmit on these bands. Instructions
>are available on the internet, and may involve minor soldering or just
>cutting a wire on some older radios. Radio price ranges $200-800 new,

>harrassed, prosecuted, and/or have to spend thousands on legal fees even
>if you are "right." You can also lose in court even if you're right.
>Big money and connections often speak louder than the law in court.

It probably isn't illegal to transmit, as long as it is a dire emergency,
and no other form of communication is available.

>I think it's also (excluding emergencies) illegal to use a modified
>radio to transmit on police (or anything but ham frequencies) freqencies
>even if you are licensed to transmit on those frequencies. The FCC
>generally requires some form of approval of the radio for the specific
>frequency used.

In an emergency situation, (from 97.40x) any amateur station may do
basically anything.

Richie L. Allen <kc5nzr@rt66.com> wrote:
>Someone at a recent hamfest that I attended stated that "Morse code is the
>most efficient means of communication possible" (right, Jerry?). I cannot
>believe the idiocy of this statement.

Well, in what context did he state those remarks? What did you say that
prompted him to make that statement? You've got to place us in the same
scenario as when those remarks were made if you want valid opinions from
us.

>Pick up your cordless phone.

Try to build one from scratch. Ham radio not just about using radio
equipment, but also developing the skills to build equipment, too.
What radios are you operating on the air which you've assembled your-
self, Richie?

We could say that "efficiency" of a particular mode might include:
effort needed to collect components, time needed to assemble
the components into a working radio, finding and eliminating
any "bugs" - get the idea, Richie? I can assemble a working CW
transmitter in a matter of a few hours using components from a
TV set. On the other hand, how long will it take you to assemble
your 900 MHz phone? =:o (Gary: The receiver might take more
than a few hours, but it's really not all that difficult; lots
of the fellows on the homebrew e-lists are assembling and using
regens [designed in a modern context]).

>If you purchased it in the last year it is
>probably operating with a digitally encoded spread spectrum mode. Seems to
>me that is damn efficient, given loads of these phones can operate at the
>same time, in the same narrow band of frequencies, with NO interference.

Can I use it to find someone on 40m for a chess game? Can I use it to
hold a Pacific island round-table net on 30m?

>CW is fun, it can get thru QRM where SSB and other modes fail, but it is
>100+ year old technology.

Verbal communications is thousands of years old - but the SSB and FM
folks are still using it.

Now, next time you start a CW/code thread, please use the newsgroup
which was created for such remarks: rec.radio.amateur.policy

Just because you don't have a $40,000 spectrum analyzer in your shack
doesn't
mean that you can't build a transmitter. When was the last time the FCC
fined
anyone for anything that wasn't willful and deliberate? The most they
would do
to you is point out that you have a spur and would you please correct it
and
let them know what action you have taken. I don't know that they even do
that
anymore, they seem to be firing most of their technical staff in order
to hire
more lawyers.

Pure? This is an example of purity? I think the filter is in back to front if this is the result of the filtering it provides.

Is this a widely held opinion of those who wish to keep code testing, that part of its objective is to keep out the sick and the lame? I would hope not, because if it is, the hobby won't be destroyed by the removal of the Morse test - it is already dead.

I really did not and have not kept up with thing's at all. After I left
SAC I spent the rest of my AF time in TAC. At Lockbourne we had 3 KWT 6's
and a field full of antenna's. Rhombic's, Discones, etc. Used to check
into the Hawaii phone net just for the fun of it on 75 meters..HI HI.

Had a friend in AF after the 85 period. He was a operator at NORAD and
he was linked up like you described. So, guess it's a new world now.

Radio Shack catalogues have always had prices marked on their cover. This goes back more than 30 years by now. However, I don't know of anyone, until now, who has actually had to pay for one. I certainly haven't.

Incidently, has ever seen a catalogue from Newark? 3 1/2 inches thick, gloss cover, packed with information, and better quality at better prices than Radio Shack....and they send it to me FREE. What the hell do these guys at Radio Shack think they're selling?

It has been discussed here before. Radio Shack, as an entity, has the most thinly disguised contempt for their knowledgable customers. Charging for their catalogues is only a symptom of a much deeper problem with the corporate culture. It is the corporate culture that is specified by the top of the organization, the values of which are reflected in the attitude, and commitment of the persons on the front line.

The problem seems to be lack of a standard frequency. As far as I know 50.600 is the digital frequency on 6. If we all made an effort to use it maybe we might run into each other. I'll bring my beam toward you on 50.600 and listen. I'll be in LSB, 45 Baud, Baudot.....If I'm not home I'll leave my Packet on 50.620 FM 1200 Baud, you might try to connect, if not just listen. I think we are close enough to work good extended groundwave. 73

Yeah, since SAC, TAC and MAC merged into USSTRATCOM.and there's a ACC
Air Combat Command, and Air Mobility Command. That realignment reallly
tightened their belts. That's the DOD for you. I can hear Andrews pretty good
from my QTH. Offutt, as well. I listen in on VHF/UHF also.
Norad @ Cheyenne Mt.has some HF freqs:

Quite a large group actually. The repeater is located downtown, on
430, 1250 and 2433 MHz. Input for the 430 system is 439.25, output is
427.25, they are horizontal polarization. Coordination and control is on
147.25 FM, and they hold a net tuesday nights at 9PM local on that
frequency.

Check http://psycho.psy.ohio-state.edu for more information.

Have fun, ATCO is a good group.
